2007-06-13

Exploring basic science and the clinical applications, *Recurrent Pregnancy Loss: Causes, Controversies and Treatment* provides an authoritative, comprehensive review of the management of recurrent pregnancy loss. Many subjects in this area are controversial, and occasionally clinical decisions are based on lack of knowledge rather than evidence. For [It Starts with the Egg](#) - Rebecca Fett 2019-02-28 A practical and evidence-backed approach for improving egg quality and fertility-- fully revised and updated in 2019. The latest scientific research reveals that egg quality has a powerful impact on how long it takes to get pregnant and the risk of miscarriage. Poor egg quality is in fact the single most important cause of age-related infertility, recurrent miscarriage, and

failed IVF cycles. Based on a vast array of scientific research, *It Starts with the Egg* provides a comprehensive program for improving egg quality in three months, with specific advice tailored to a variety of fertility challenges-- including endometriosis, unexplained infertility, diminished ovarian reserve, PCOS, and recurrent miscarriage. Recurrent Implantation Failure - Jason M. Franasiak 2018-04-03

This unique text discusses the wide range of causes and pathophysiologic conditions contributing to recurrent implantation failure (RIF) and the current treatment approaches to best approach this challenging patient population. Beginning with a presentation of the mechanism of normal implantation, the physiologic synchrony between embryo and endometrium, and the roles of both gametes and embryos in RIF, the book then examines the various genetic, immune and environmental factors involved. Abnormalities of the hematologic and endocrine system, as well as those of the anatomy and microbiome, are described in detail. Last but not less important, the psychological stress and treatment of patients experiencing RIF is discussed. Assisted reproductive technology (ART) success has increased substantially over the past three decades. However, despite these advances, recurrent implantation failure is still a common issue confronting patients and clinicians, and RIF represents one of the greatest challenges in ART and remains a source of frustration and disappointment for patients, clinicians, and researchers involved in the process. Providing an in-depth investigation into the pathophysiology and biological mechanisms of RIF and its clinical management, this will be an excellent resource for reproductive endocrinologists and infertility specialists.

**Thyroid Autoimmunity** - A. Pinchera 2012-12-06

In 1956, three groups independently reported evidence that some thyroid disease appearing spontaneously in humans or experimentally induced in animals are related to autoimmune processes. The interval between these landmark discoveries and the present has witnessed a remarkable and continuing growth of both knowledge and concepts concerning the mechanisms of immune regulation, the pathogenesis of autoimmune thyroid diseases, and their clinical and laboratory manifestations. More importantly knowledge of thyroid autoimmunity has, in many respects, comprised the vanguard of an ever increasing appreciation and understanding of autoimmune diseases in general. On November 24-26 1986, an International Symposium on Thyroid Autoimmunity was held in Pisa. Its purpose was to commemorate the birth of thyroid autoimmunity as a scientific discipline, to summarize current knowledge and concepts in this area, and where possible, to anticipate areas of opportunity for the future - hence the theme of the Symposium, Memories and Perspectives. To open the meeting, the Magnifico Rettore (Chancellor) of the University of Pisa granted special Awards to Dr. Deborah Doniach, Dr. Ivan Roitt, and Dr. Noel R. Rose, who published the first fundamental studies in the field of thyroid autoimmunity, and to Dr. Duncan G. Adams, whose discovery of the long-acting thyroid stimulator (LATS) opened the door to our current understanding of the pathogenesis of Graves' disease. During the meeting thirty plenary lectures were presented.

**Integrated Approach To Obstetrics And Gynaecology** - Kuldip Singh 2016-07-27

Written by medical specialists and faculty of the Department of Obstetricians and Gynaecology, National University Health Services, Integrated Approach to Obstetrics and Gynaecology is a textbook for medical undergraduates and residents. This textbook is unique in that it takes an integrated approach in discussing the six phases in the life of a woman, namely, the early years of growing up, the reproductive years, pre-conception, early pregnancy, pregnancy care, and functional ageing in a mature woman. Emphasis has been focused on information that constitutes essential 'core knowledge' in the blueprint of the medical undergraduate curriculum. The format is easy to follow: background introduction to history; examinations and investigations to establish a diagnosis and then treatment and management. However, this may have to be modified as deemed appropriate for a particular topic.

Where appropriate, knowledge that is 'good to know' has been incorporated beyond the essential 'core knowledge'.
