Dietary Reference Intakes for Energy, Carbohydrate, Fiber, Fat, Fatty Acids, Cholesterol, Protein, and Amino Acids -

Institute of Medicine 2005-11-28

Responding to the expansion of scientific knowledge about the roles of nutrients in human health, the Institute of Medicine has developed a new approach to establish Recommended Dietary Allowances (RDAs) and other nutrient reference values. The new title for these values Dietary Reference Intakes (DRIs), is the inclusive name being given to this new approach. These are quantitative estimates of nutrient intakes applicable to healthy individuals in the United States and Canada. This new book is part of a series of books presenting dietary reference values for the intakes of nutrients. It establishes recommendations for energy, carbohydrate, fiber, fat, fatty acids, cholesterol, protein, and amino acids. This book presents new approaches and findings which include the

following: The establishment of Estimated Energy Requirements at four levels of energy expenditure Recommendations for levels of physical activity to decrease risk of chronic disease The establishment of RDAs for dietary carbohydrate and protein The development of the definitions of Dietary Fiber, Functional Fiber, and Total Fiber The establishment of Adequate Intakes (AI) for Total Fiber The establishment of AIs for linolenic and a-linolenic acids Acceptable Macronutrient Distribution Ranges as a percent of energy intake for fat, carbohydrate, linolenic and a-linolenic acids, and protein Research recommendations for information needed to advance understanding of macronutrient requirements and the adverse effects associated with intake of higher amounts Also detailed are recommendations for both physical activity and energy expenditure to maintain health and decrease the risk of disease. *The Overnight Diet* - Caroline Apovian

disease, and live a longer, healthier life. Can what you eat determine how long, and how well, you live? The clinically proven answer is yes, and The Longevity Diet is easier to follow than you'd think. The culmination of 25 years of research on ageing, nutrition, and disease across the globe, this unique combination of an everyday diet and fasting-mimicking diet (FMD) to be done only 3-4 times per year lays out a simple solution to living to a healthy old age through nutrition. FMD does away with the misery and starvation most of us experience while fasting and helps you reap all the beneficial health effects of a restrictive diet while avoiding the negative stressors, like low energy and sleeplessness. Valter Longo, Director of the Longevity Institute at USC and the Program on Longevity and Cancer at IFOM in Milan, developed THE FMD after making a series of remarkable discoveries in mice and humans indicating that specific diets can activate stem cells and promote regeneration and rejuvenation in multiple organs to reduce

the risk for diabetes, cancer, Alzheimer's and heart disease. Longo's simple pescatarian daily eating plan and the periodic, fasting-mimicking techniques can both yield impressive results. Low in proteins and sugars and rich in healthy fats and plant-based foods, The Longevity Diet is clinically proven to help you: Lose weight and reduce abdominal fat Make simple changes which can extend the healthy lifespan Prevent age-related muscle and bone loss Build your resistance to diabetes, cardiovascular disease, Alzheimer's and cancer Longo's healthy, life span-extending plan is based on an easy-to-adopt pescatarian plan along with the fasting-mimicking diet 4 times a year, and just 5 days at a time. The Longevity Diet is the key to living a longer, healthier, and more fulfilled life.

Food Wisdom for Women - Donna Feldman
2018-03-08

Today's older women have lived through plenty of social and cultural change. We're now at the forefront of another big change: a redefinition of aging. We aren't content to just worry about chronic diseases. Our generation expects more than that from life. If your vision of aging includes an active and rewarding life infused with as much vitality, energy and health as possible, 'Food Wisdom for Women' is for you. You'll find nutrition information on a diverse set of topics of concern to us all, such as eye health, bone strength, supplements, digestive health and brain function. 'Food Wisdom for Women' has the latest information about nutrition and aging, as well as advice on how to put that

information to work for your own health. *Nutrient Requirements of Dogs and Cats* - National Research Council 2006-07-01
Updating recommendations last made by the National Research Council in the mid-1980s, this report provides nutrient recommendations based on physical activity and stage in life, major factors that influence nutrient needs. It looks at how nutrients are metabolized in the bodies of dogs and cats, indications of nutrient deficiency, and diseases related to poor nutrition. The report provides a valuable resource for industry professionals formulating diets, scientists setting research agendas, government officials developing regulations for pet food labeling, and as a university textbook for dog and cat nutrition. It can also guide pet owners feeding decisions for their pets with information on specific nutrient needs, characteristics of different types of pet foods, and factors to consider when feeding cats and dogs.

A provocative look at how and what Americans eat and why—a flavorful blend of *The Omnivore’s Dilemma*, *Salt Sugar Fat*, and *Freakonomics* that reveals how the way we live shapes the way we eat. Food writer and Culinary Institute of America program director Sophie Egan takes readers on an eye-opening journey through the American food psyche, examining the connections between the values that define our national character—work, freedom, and progress—and our eating habits, the good and the bad. Egan explores why these values make for such an unstable, and often unhealthy, food culture and, paradoxically, why they also make America’s cuisine so great. Egan raises a host of intriguing questions: Why does McDonald’s have 107 items on its menu? Why are breakfast sandwiches, protein bars, and gluten-free anything so popular? Will bland, soulless meal replacements like Soylent revolutionize our definition of a meal? The search for answers takes her across the culinary landscape, from

the prioritization of convenience over health to the unintended consequences of “perks” like free meals for employees; from the American obsession with “having it our way” to the surge of Starbucks, Chipotle, and other chains individualizing the eating experience; from high culture—artisan and organic and what exactly “natural” means—to low culture—the sale of 100 million Taco Bell Doritos Locos Tacos in ten weeks. She also looks at how America’s cuisine—like the nation itself—has been shaped by diverse influences from across the globe. Devoured weaves together insights from the fields of psychology, anthropology, food science, and behavioral economics as well as myriad examples from daily life to create a powerful and unique look at food in America.

Meathooked - Marta Zaraska 2016-02-23

the environment and our bodies. Many of us have tried to limit how much meat we consume, and many of us have tried to give it up altogether. But it is not easy to resist the smoky, cured, barbecued, and fried delights that tempt us. What makes us crave animal protein, and what makes it so hard to give up? And if consuming meat is truly unhealthy for human beings, why didn't evolution turn us all into vegetarians in the first place? In *Meathooked*, science writer Marta Zaraska explores what she calls the "meat puzzle": our love of meat, despite its harmful effects. Zaraska takes us on a witty tour of meat cultures around the world, stopping in India's unusual steakhouses, animal sacrifices at temples in Benin, and labs in the Netherlands that grow meat in petri dishes. From the power of evolution to the influence of the meat lobby, and from our genetic makeup to the traditions of our foremothers, she reveals the interplay of forces that keep us hooked on animal protein. A book for everyone from the diehard carnivore to

the committed vegan, *Meathooked* illuminates one of the most enduring features of human civilization, ultimately shedding light on why meat-eating will continue to shape our bodies -- and our world -- into the foreseeable future.

Dietary Reference Intakes for Vitamin A, Vitamin K, Arsenic, Boron, Chromium, Copper, Iodine, Iron, Manganese, Molybdenum, Nickel, Silicon, Vanadium, and Zinc - Institute of Medicine 2002-07-19
This volume is the newest release in the

authoritative series issued by the National Academy of Sciences on dietary reference intakes (DRIs). This series provides recommended intakes, such as Recommended Dietary Allowances (RDAs), for use in planning nutritionally adequate diets for individuals based on age and gender. In addition, a new reference intake, the Tolerable Upper Intake Level (UL), has also been established to assist an individual in knowing how much is "too much" of a nutrient. Based on the Institute of Medicine's review of the scientific literature regarding dietary micronutrients, recommendations have been formulated regarding vitamins A and K, iron, iodine, chromium, copper, manganese, molybdenum, zinc, and other potentially beneficial trace elements such as boron to determine the roles, if any, they play in health. The book also: Reviews selected components of food that may influence the bioavailability of these compounds. Develops estimates of dietary intake of these compounds that are compatible

with good nutrition throughout the life span and that may decrease risk of chronic disease where data indicate they play a role. Determines Tolerable Upper Intake levels for each nutrient reviewed where adequate scientific data are available in specific population subgroups. Identifies research needed to improve knowledge of the role of these micronutrients in human health. This book will be important to professionals in nutrition research and education.

The Smarter Science of Slim - Jonathan Bailor 2012

As our knowledge of the human body becomes ever more exact, scientists have made remarkable leaps forward in many fields. Yet for one question that many of us would like answered--What causes the body to burn fat?--we find all sorts of confusing claims. Since we know so much about how our body works, can't science tell us the answer? As it turns out, science already has. I have spent over ten years

reading thousands of fat-loss studies. Not theories promoted by diet gurus. Only the proven data. My investigation uncovered all kinds of scientific findings: - Studies stating how certain foods cripple our ability to burn fat - Scientists showing how to burn fat while eating more food - Researchers revealing how to get all the benefits of traditional exercise in a tenth of the time - Physiologists finding out how eating less sets us up to gain fat in the long run - Doctors discussing how a few minutes of a new form of exercise immunizes us against fat gain - Endocrinologists explaining how we fix the underlying condition causing us to gain fat We deserve to know the proven facts about fat loss, but who has time to read tens of thousands of pages of scientific studies? The study took me more than a decade. It should not take you that long because the facts have been summarized in this book. They have also been simplified, so anyone who wants to lose weight can understand them. Make no mistake. Tons of clinical studies

Recommended Dietary Allowances - National Research Council 1989-02-01

Since its introduction in 1943 Recommended Dietary Allowances has become the accepted source of nutrient allowances for healthy people. These Recommended Dietary Allowances (RDAs) are used throughout the food and health fields. Additionally, RDAs serve as the basis for the U.S. Recommended Daily Allowances, the Food and Drug Administration's standards for nutrition labeling of foods. The 10th Edition includes research results and expert interpretations from

years of progress in nutrition research since the previous edition and provides not only RDAs but also "Estimated Safe and Adequate Daily Dietary Intakes" – provisional values for nutrients where data were insufficient to set an RDA. Organized by nutrient for ready reference, the volume reviews the function of each nutrient in the human body, sources of supply, effects of deficiencies and excessive intakes, relevant study results, and more. The volume concludes with the invaluable "Summary Table of Recommended Dietary Allowances," a convenient and practical summary of the recommendations.
