The Geography of Strabo - 2014-05-29

The Geography of Strabo is the only surviving work of its type in Greek literature, and the major source for the history of Greek scholarship on geography and the formative processes of the earth. In addition, this lengthy and complex work contains a vast amount of information on other topics, including the journey of Alexander the Great, cultic history, the history of the eastern Mediterranean in the first century BC, and women's history. Modern knowledge of seminal geographical authors such as Eratosthenes and Hipparchos relies almost totally on Strabo's use of them. This is the first complete English translation in nearly a century, and the first to make use of recent scholarship on the Greek text itself and on the history of geography. The translation is supplemented by a detailed discussion of Strabo's life and his purpose in writing the Geography, as well as the sources that he used.

The Federalist Papers - Alexander Hamilton 2018-08-20

Classic Books Library presents this brand new edition of "The Federalist Papers", a collection of separate essays and articles compiled in 1788 by Alexander Hamilton. Following the United States Declaration of Independence in 1776, the governing doctrines and policies of the States lacked cohesion. "The Federalist", as it was previously known, was constructed by American statesman Alexander Hamilton, and was intended to catalyse the ratification of the United States Constitution. Hamilton recruited fellow statesmen James Madison Jr., and John Jay to write papers for the compendium, and the three are known as some of the Founding Fathers of the United States. Alexander Hamilton (c. 1755–1804) was an American lawyer, journalist and highly influential government official. He also served as a Senior Officer in the Army between 1799-1800 and founded the Federalist Party, the system that governed the nation's finances. His contributions to the Constitution and leadership made a significant and lasting impact on the early development of the nation of the United States.

Discourse on the Arts and Sciences - Jean-Jacques Rousseau 2005

Censored in its own time, the Social Contract (1762) remains a key source of democratic belief and is one of the classics of political theory. It argues concisely but eloquently, that the basis of any legitimate society must be the agreement of its members. As humans we were 'born free' and our subjection to government must be freely accepted. Rousseau is essentially a radical thinker, and in a broad sense a revolutionary. He insisted on the sovereignty of the people, and made some provocative statements that are still highly controversial. His greatest contribution to political thought is the concept of the general will, which unites individuals through their common self-interest, thus validating the society in which they live and the constraints it imposes on them. This new translation is fully annotated and indexed. The volume also contains the opening chapter of the manuscript version of the Contract, together with the long article on Political Economy, a work traditionally between the Contract and Rousseau's earlier masterpiece, the Discourse on Inequality.

The World Republic of Letters - Pascale Casanova 2004

The "world of letters" has always seemed a matter more of metaphor than of global reality. In this book, Pascale Casanova shows us the state of world literature behind the stylistic refinements--a world of letters relatively independent from economic and political realms, and in which language systems, aesthetic orders, and genres struggle for dominance. Rejecting facile talk of globalization, with its suggestion of a happy literary "melting pot," Casanova exposes an emerging regime of inequality in the world of letters, where minor languages and literatures are subject to the invisible but implacable violence of their dominant counterparts. Inspired by the writings of Fernand Braudel and Pierre Bourdieu, this ambitious

book develops the first systematic model for understanding the production, circulation, and valuing of literature worldwide. Casanova proposes a baseline from which we might measure the newness and modernity of the world of letters--the literary equivalent of the meridian at Greenwich. She argues for the importance of literary capital and its role in giving value and legitimacy to nations in their incessant struggle for international power. Within her overarching theory, Casanova locates three main periods in the genesis of world literature--Latin, French, and German--and closely examines three towering figures in the world republic of letters--Kafka, Joyce, and Faulkner. Her work provides a rich and surprising view of the political struggles of our modern world--one framed by sites of publication, circulation, translation, and efforts at literary annexation.
