

Think Of One Sextet

Play the Way You Feel - Kevin Whitehead 2020
"This book-both a narrative and a film directory-surveys and analyzes English-language feature films (and a few shorts and TV shows/movies) made between 1927 and 2016 that tell stories about jazz music, its musicians, its history and culture. *Play the Way You Feel* looks at jazz movies as a narrative tradition with recurring plot points and story tropes, whose roots and development are traced. It also demonstrates how jazz stories cut across diverse genres-biopic, romance, musical, comedy and science fiction, horror, crime and comeback stories, "race movies" and modernized Shakespeare-even as they constitute a genre of their own. The book is also a directory/checklist of such films,

66 of them with extensive credits, plus dozens more shorter/capsule discussions. Where jazz films are based on literary sources, they are examined, and the nature of their adaptation explored: what gets retained, removed, or invented? What do historical films get right and wrong? How does a film's music, and the style of the filmmaking itself, reinforce or undercut the story?--

The Prize - Kim Anderson 2023-04-04

When two artists enter the 1943 Archibald Prize, a scandal erupts that grips not only the art world, but the nation. A poignant love story with shattering consequences, inspired by real-life events. 'Is that what you want to do? Peer into my soul and capture my flaws, for all to see?' As

World War II draws to a close, Australian society is still deeply conservative. Homosexuality is illegal and the scourge of Modernism is infecting Australian art. When William Dobell paints a portrait of lover and fellow artist Joshua Smith, he is awarded Australia's most prestigious art prize. A protest is lodged by Dobell's competitors who claim the painting is a caricature. Both artist and sitter soon find themselves in the glare of the spotlight when a court case to determine the matter turns into a public spectacle. Bill and Joshua's relationship is put under pressure and at risk of being exposed as they are caught in a world where they must choose between love and art: between acceptance and exile.

Functionalization of Semiconductor

Surfaces - Franklin (Feng) Tao 2012-03-16

This book presents both fundamental knowledge and latest achievements of this rapidly growing field in the last decade. It presents a complete and concise picture of the the state-of-the-art in

the field, encompassing the most active international research groups in the world. Led by contributions from leading global research groups, the book discusses the functionalization of semiconductor surface. Dry organic reactions in vacuum and wet organic chemistry in solution are two major categories of strategies for functionalization that will be described. The growth of multilayer-molecular architectures on the formed organic monolayers will be documented. The immobilization of biomolecules such as DNA on organic layers chemically attached to semiconductor surfaces will be introduced. The patterning of complex structures of organic layers and metallic nanoclusters toward sensing techniques will be presented as well.

Jazz and Culture in a Global Age - Stuart Nicholson 2014-06-03

past, present, and future. Jazz's emergence on the world scene coincided with America's rise as a major global power. The uniqueness of jazz's origins--America's singularly original gift of art to the world, developed by African Americans--adds a level of complexity to any appreciation of jazz's global presence. In this volume, Nicholson covers such diverse and controversial topics as jazz in the iPod musical economy, issues of globalization and authenticity, jazz and American exceptionalism, jazz as colonial tip of the sword, global interpretation, and the limits of jazz as a genre. Nicholson caps the volume with fascinating and anecdote-rich discussions of jazz as a form of "modernism" in the twentieth century, the history of jazz fads (such as the cakewalk) that elicited very different reactions among American and European audiences, and a hearty defense of Paul Whiteman and his efforts to legitimize jazz as art. Stuart Nicholson has written a thought-provoking and opinionated work that should equally engage and enrage all

manner of jazz lovers, scholars, and aficionados.

A remarkable book, destined to become a classic in its field. In the lucidity, penetration, and rigor of its analyses of the philosophical positions with which Plato experiments in this dialogue and in its power to connect these positions with present day metaphysical and epistemological theories it has no superior.

Thinking about Things and Other Frivolities

- Edward Farley 2014-02-13

This memoir records the story of the author's personal journey toward a life of university teaching and probes that story in reflective essays on a variety of subjects. One group of essays has to do with the characteristic activities and institutional setting of a professor. Other essays explore ways of experiencing the world as mysterious, beautiful, and tragic. One piece offers a rather somber account of current ways in which the American experiment in democracy is in peril. Scraps of what looks like an intellectual autobiography are scattered over the pages of the narrative, recalling the puzzles that gave rise to a number of writing projects. In a

way this is a book of paradoxes and antitheses. Janus-like, it faces toward the past and the future. It offers generalized convictions and specific observations, treats both the ordinary themes of life experience and tangled esoterica, and presents both the experiences of an individual and an analysis of educational institutions. As a whole, the book invites readers to join the author in "thinking about things."
[Race Against Time](#) - Frederick Septimus Kelly 2004

Frederick Septimus Kelly, pianist, composer, Olympic gold medallist, World War I officer, diarist and Australian, was killed during the final battle of the Somme on 13 November 1916. He was 35. An expatriate long forgotten in his own country, he lived an extraordinary life in the company of some of Europe's most influential people. His diaries, covering the period 1907-1915, are held in the National Library of Australia.

An Italian Renaissance Sextet - Lauro

Martines 2004-01-01

An Italian Renaissance Sextet is a collection of six tales offering a unique view of the history of Renaissance Italy, with fiction and fictional modes becoming gateways to a real, historical world. All written between 1400 and 1500 - among them a rare gem by Lorenzo the Magnificent and a famous account featuring Filippo Brunelleschi - the stories are presented here in lively translations. As engrossing, fresh, and high-spirited as those in Boccaccio's Decameron, the tales deal with marriage, deception, rural manners, gender relations, social ambitions, adultery, homosexuality, and the demands of individual identity. Each is accompanied by an essay, in which Lauro Martines situates the story in its temporal context, transforming it into an outright historical document. The stories and essays focus mainly on people from the ordinary and middling ranks of society, as they go about their ordinary lives, under the pressure of a highly

practical, conformist, pleasure-loving (but often cruel) urban society. Revealing the concerns of a searching historical work with a combined anthropological, demographic, and cultural slant, An Italian Renaissance Sextet shines a probing light on Italian Renaissance culture. *Esoptrics* - Edward N. Mobile Source Emissions Including Polycyclic Organic Species - D. Rondia 2012-12-06

Species". This meeting was held in Liege, Belgium, from August 30 to September 2, 1982, as an Advanced Research Workshop (ARW). Specialists from 13 countries met to discuss the impacts of fuel type and engine operation on emissions from gasoline and diesel-powered vehicles. The meeting was organized into five sessions: basic studies, biological activity, analytical methods, data bases, engineering and international research programs. The five sessions were each followed by intensive discussions on the important conclusions to be drawn from the data presented. From these session discussions, subcommittee efforts and a final group discussion on all the research results presented, a meeting summary was prepared by the editors that presents the major findings of the conference and gives detailed recommendations for future research. This summary is included at the end of the book. The summary includes highlights of data presented, areas of research needs, recommendations for

standardization of test parameters and species analyzed, suggested new methodology for characterizing mobile emissions, trends in fuel use including diesel, gasoline, anti-knock additives and blending agents, operation of catalysts, control strategies, implications from both in vivo and in vitro health effects studies, and a presentation of the scope and direction of several large international programs that are major studies of mobile source performance. Advances in Superconductivity VIII - Hisao Hayakawa 2013-11-11

remarkable improvement in superconducting properties has been achieved due to the fine optimization of fabrication processes, and this has attracted industrial interest for future applications. In the case of NdBaCuO materials, a new pinning mechanism was found which enhances the critical current under applied magnetic fields. In single crystals of these materials, oxygen control results in an increase in the growth rate. The metalorganic chemical vapor deposition (MOCVD) film quality has been improved by using a new liquid raw material. Simultaneously, real demands from the viewpoint of the market start to be a motivation force, especially in electronics application where some products are already being sold. At the same time, interesting physical properties have been obtained from a new superconducting single crystal which has a layered perovskite structure without copper. In addition, various precision measurement techniques have

confirmed the d-wave mechanism and the existence of intrinsic Josephson junctions in single crystals. These new phenomena challenge the existing theoretical models but also open the way for new applications. These significant areas of progress in materials science have led high-Tc superconductivity research into the next phase of activity, while fundamental research continues to be very important. I sincerely hope that this volume will give further impetus to this development.
