How to Naturally Overcome Unexplained Infertility Elvis Oswald 2013-03-25 The thing we can't have is the thing we crave the most. This aphorism is never truer than when it comes to having children. Alarming new research, showing that a woman's fertility begins to decline at 30- rather than 35 as had long been believed, has brought new urgency to the debate as to "right" age to have a baby. But given the fact that we live in an era where women put careers first and try for children later- in fact than at any time in modern history, it is not surprising to discover a burgeoning interest in natural ways of prolonging fertility. There are many reasons for infertility. Understanding the cause of infertility is very important in deciding which type of therapy is best for your specific case. Be positive about your ability to solve your problem and learn as much as possible about your condition as you can. This knowledge will give you the power you need to help improve your situation and achieve a healthy pregnancy naturally. Many couples have achieved healthy pregnancy after years of failed fertility treatments like in-vitro fertilization after changing their dietary habits, making significant life style changes, taking fertility vitamins and natural remedies and doing yoga and learning effective ways to release stress. You can get pregnant naturally, even if you have endometriosis, fibroids, blocked fallopian tubes, low sperm count, poor sperm motility, hormonal imbalance, luteal phase defect, irregular periods, poor egg quality, PCOS, etc. It is about time that fertility doctors start listening to what scientists in the field of ecology, epidemiology, endocrinology and toxicology have been saying for years. Instead of IVF and fertility drugs, as a solution to infertility, women need a treatment and a cure that counteracts the harmful effects of hormonal disruptors. This is important not just for you, but for the daughter of your daughters to come. In terms of baby gender selection, this offers the chance for a more balanced family and allows your children to feel wanted. A female child who knows that her family wished she were a boy carries an unnecessary burden throughout their childhood. As more parents choose their children with success, there will be more love to go round, less rejection, and a reduction in family size. Whether you get a baby boy or baby girl depends on one simple fact. The sperm carries the genetic material called chromosome X or chromosome Y that determines the sex of the baby. Do you want to get pregnant with a high degree of certainty to have a son or a daughter? Can you be certain about it even before you conceive it? Would you like to move on from 50:50 chances on gender selection to 55-65% or a higher degree of certainty which is beyond 98%? These and more are what this book has set out to elaborate. And so this is to help achieve the desires and bring to the knowledge of couples and yet to be couples on what they should know and do with this information within the eBook (about unexplained infertility and sex selection).

The book discusses how the clash of opinions on sex and family planning prevents us from making a national commitment to reproductive health; why people in the United States have fewer contraceptive choices than those in many other countries; what we need to do to improve social and medical services for teens and people living in poverty; how couples should "shop" for a fertility service and make consumer-wise decisions; and what we can expect in the future—featuring interesting accounts of potential scientific advances.

**The Baby Trail** Sinead Moriarty 2010-05-11 Makeup artist Emma Hamilton is thirty-three when she and her husband James decide it's time to start a family. She has it all mapped out: Go off the pill in December, have sex, get pregnant by January, have the baby in September. With the help of a personal trainer, she figures she'll be back to her fighting weight in time for Christmas. But when three months of candle-scented sex fails to produce the desired result, Emma decides that maybe Mother Nature needs a helping hand. Soon her life is a roller coaster of post-coital handstands (you can't argue with gravity), hormone-inducing (sanity-reducing!) drugs, and a veritable army of probing specialists (torturers, more like). It's out with alcohol and spontaneous sex, in with green tea and ovulation kits. Emma and James try everything from fertility drugs to in vitro, but all their carefully laid plans seem to go south -- along with Emma's rapidly plummeting self-esteem. The members of her support team are unquestionably loyal, but distracted by their own personal dramas. There's Babs, her younger sister, who prescribes Emma half an Ecstasy pill to treat her depression. Her friend Jess is pregnant with her second child and gives Emma an earful about the downside of motherhood. The glamorous Lucy, Emma's closest pal, fears she might be stuck in her "single rut" forever -- that is, until she meets Donal, a rough-around-the-edges rugby player who passes out on their first date but quickly proves that he is worth a second chance. And last, but certainly not least, is James, Emma's rugby coach husband, who quite unhelpfully manages to give himself a groin injury just when she is ovulating. But just when Emma feels as if her obsession may have alienated all of her loved ones, including James, events take a ninety-degree turn that will have unforeseen consequences for everyone. Sinead Moriarty brings a wicked sense of humor to a subject of feverish concern for women worried by the loud ticking of their biological clocks in this sizzingly funny, yet deeply moving novel.

**Contemporary Bioethics** Mohammed Ali Al-Bar 2015-05-27 This book discusses the common principles of morality and ethics derived from divinely endowed intuitive reason through the creation of al-fitr' a (nature) and human intellect (al-'aql). Biomedical topics are presented and ethical issues related to topics such as genetic testing, assisted reproduction and organ transplantation are discussed. Whereas these natural sources are God's special gifts to human beings, God's revelation as given to the prophets is the supernatural source of divine guidance through which human communities have been guided at all times through history. The second part of the book concentrates on the objectives of Islamic religious practice - the maqa' sid - which include: Preservation of Faith, Preservation of Life, Preservation of Mind (intellect and reason), Preservation of Progeny (al-nasl) and Preservation of Property. Lastly, the third part of the book discusses selected topical issues, including abortion, assisted reproduction devices, genetics, organ transplantation, brain death and end-of-life aspects. For each topic, the current medical evidence is followed by a detailed discussion of the ethical issues involved.

**Exploring the Biological Contributions to Human Health** Institute of Medicine 2001-07-02 It's obvious why only men develop prostate cancer and why only women get ovarian cancer. But it is not obvious why women are more likely to recover language ability after a stroke than men or why women are more apt to develop autoimmune diseases such as lupus. Sex differences in health throughout the lifespan have been documented. *Exploring the Biological Contributions to Human Health* begins to snap the pieces of the puzzle into place so that this knowledge can be used to improve health for both sexes. From behavior and cognition to metabolism and response to chemicals and infectious organisms, this book explores the health impact of sex (being male or female, according to reproductive organs and chromosomes) and gender (one's sense of self as male or female in society). *Exploring the Biological Contributions to Human Health* discusses basic biochemical differences in the cells of males and females and health variability between the sexes from conception throughout life. The book identifies key research needs and opportunities and addresses barriers to research. *Exploring the Biological Contributions to Human Health* will be important to health policy makers, basic, applied, and clinical researchers, educators, providers, and journalists-while being very accessible to interested lay readers.

**Baby Mine** Faith Loveright 2014-05-04 Eric had loved and lost. His wife had suddenly passed away in a car accident and he had believed his chances of being a father were long past. They had struggled with fertility and had seen a specialist who had fertilized several eggs for them and kept them frozen for Eric, just on the safe side. He had sworn up one side and down the other that without Victoria, he had no interest in the embryos. It isn't until he gets confirmation from a panicked man at the clinic telling him that a woman had accidentally received their eggs instead of her own that Eric realized that if he was going to be a father anyways, he wanted to be the one to raise the baby in question. Madeline had given up on finding the perfect man to conceive the child she wanted so desperately and had done the unthinkable... She'd gone to a fertility doctor to look into using a sperm donor. She had been over the moon happy when she was told that the procedure had been a success... at least until an angry rancher showed up on her door demanding access to her unborn baby. She had gone through a lot to find a way to have this child. There was no way she was handing it over to some overbearing cowboy. They both thought of Lillie Rose as theirs... the only things in question were how they were going to deal with the fact that they both had rights where the sweet baby girl was concerned. The bigger problem was figuring out what they were going to do about the growing attraction they begin to feel for each other the more time they spend getting to know the daughter they share.
