Rethinking Wood Markus Hudert 2019-04-18 Advances in the materials and the digitalization of architecture bring about new methods in design and construction. Whereas traditional timber construction consists of pre-cut and pre-assembled timber sections, modern timber buildings today consist of elaborate wood-based materials. Owing to their flexibility and good properties in terms of building physics and ecology, these wood-based materials are ideal for computer-aided building component production. Fifteen case examples from research, teaching, and practical applications provide inspiring insights into the potential of formable wood-based materials and digital design: Woven Wood, Wood Foam, Living Wood and Organic Joints, Timber Joints for Robotic Building Processes, Efficiencies of Wood, Designing with Tree Form.

A Dictionary of Sexual Language and Imagery in Shakespearean and Stuart Literature Gordon Williams 2001-09-13 Providing an alphabetical listing of sexual language and locution in 16th and 17th-century English, this book draws especially on the more immediate literary modes: the theatre, broadside ballads, newsbooks and pamphlets. The aim is to assist the reader of Shakespearean and Stuart literature to identify metaphors and elucidate meanings; and more broadly, to chart, through illustrative quotation, shifting and recurrent linguistic patterns. Linguistic habit is closely bound up with the ideas and assumptions of a period, and the figurative language of sexuality across this period is highly illuminating of socio-cultural change as well as linguistic development. Thus the entries offer as much to those concerned with social history and the history of ideas as to

the reader of Shakespeare or Dryden.

*Wood Architecture* Ruth Slavid 2005 Timber is having a renaissance as an architectural material, as more architects come to understand its properties, and enjoy adding it to their repertoire of materials. With a growing crop of good new timber buildings, architects are coming to realise that this is no longer the sole preserve of the traditionalist, but a material that has an important role to play in the contemporary world. The book's introduction examines the ways in which a raw material of diminishing quality (but abundant quantity) can be 'stretched' to perform as it has never done before using new technology and careful detailing. The 40 case studies are devoted to some of the most interesting new wood projects from around the world. The projects are grouped in seven themed chapters. Featured architects from around the world include Steven Holl, Foster and Partners, Rural Studio, Renzo Piano and Shigeru Ban.
