Charge Density Waves in Solids - Gyula Hutiray 1985

Multicritical Phenomena - Roger Pynn 2012-12-06

This book comprises the Proceedings of a NATO Advanced Study Institute on Multicritical Phenomena held in Geilo, Norway, between 10-21 April 1983. This school was the seventh to be held in Geilo, on various aspects of phase transitions. In spite of its apparently restrictive title the school was planned as a forum for the discussion of phase transitions and instabilities in systems, with competing interactions and competing order parameters. Thus, in addition to the canonical multicritical points, subjects were diverse as critical phenomena in random magnetic systems and routes to chaos were discussed. The subject matter of the school is naturally divided into a series of categories which to some extent, reflect the historical development of interest in competing phenomena at phase transitions. Multicritical points in equilibrium systems, defined phenomenologically as points of sudden change of behaviour on an otherwise smooth phase boundary, were the first topics of the school. The theoretical consensus which has emerged during the past decade, largely as a result of calculations with the renormalisation group, was reviewed in some detail. The results presented, however, apply only to pure systems (in which dirt and other manifestations of reality are irrelevant) in that small realm close to the phase transition known as "asymptopia".

Scaling Phenomena in Disordered Systems - Roger Pynn 2013-11-21

This volume comprises the proceedings of a NATO Advanced Study Institute held in Geilo, Norway, between 8-19 April 1985. Although the principal support for the meeting was provided by the NATO Committee for Scientific Affairs, a number of additional sponsors also contributed,

allowing the assembly of an unusually large number of internationally recognized speakers. Additional funds were received from: EXXON Research and Engineering Co. IBM (Europe) Institutt for energiteknikk (Norway) Institut Lauge-Langevin (France) The Norwegian Research Council for Science and Humanities NORDITA (Denmark) The Norwegian Foreign Office The U. S. Army Research, Development and Standardization Group (Europe) The U. S. National Science Foundation - The Norwegian Council for Science and Letters The organizing committee would like to take this opportunity to thank these contributors for their help in promoting a most exciting rewarding meeting. This Study Institute was the eighth of a series of meetings held in Geilo on subjects related to phase transitions. In contrast to previous meetings which were principally concerned with transitions in ordered systems, this school addressed the problems which arise when structural order is absent. The unifying feature among the subjects discussed at the school and the link to themes of earlier meetings was the concept of scaling.

Compiler Generators - Mads Tofte 2012-12-06

The Origin of this monograph is a course entitled "Semantics directed Compiler Generation" which Professor Neil D. Jones gave in 1982 at Copenhagen University, where I was a student at the time. In this course, he described a compiler generator, called CERES, which he was developing. I immediately felt attracted to the unusual combination of mathematical reasoning about compilers and the small intricate building blocks that made up the running system. As I came to understand the system I discovered that within the existing mathematical framework one could express compiler generation as a special case of compilation; this led to a specification of a compiler generator which was bootstrapped on itself resulting in a machine-generated compiler generator. The purpose

of this monograph is to describe the CERES system we produced in 1983-84 and compare it with other systems, including more recent ones. Also, it is as relevant today as it was then to discuss the role of compiler generators as an aid in the design and implementation of programming languages; this I do in Chap. 5. This monograph is a strongly revised version of the *cando scient*.

Tragedy of Romeo & Juliet - William Shakespeare 1905

Junction 2013 - 2015-10

Meridian Observations - Perth Observatory 1913

The Burgher and the Whore - Lotte van de Pol 2011-03-31

Amsterdam's reputation as a city of prostitutes is age-old. 'The Burgher and the Whore' is the story of the red light district's 'golden age', bringing to life the relationships between men and women and providing a fascinating account of what it was like to inhabit the greatest city of its day.

Functional Programming, Glasgow 1990 - Simon L. Peyton Jones
2013-03-14

This volume contains the papers presented at the 3rd Glasgow Workshop on Functional Programming which was held in Ullapool, Scotland, 13-15 August 1990. Members of the functional programming groups at the universities of Glasgow and Stirling attended the workshop, together with a small number of invited participants from other universities and industry. The papers vary from the theoretical to the pragmatic, with particular emphasis on the application of theoretical ideas to practical problems. This reflects the unusually close relationship between theory and practice which characterises the functional programming research community. There is also material on the experience of using functional languages for particular applications, and on debugging and profiling functional programs.

Uncertain Images: Museums and the Work of Photographs - Elizabeth Edwards 2016-02-17

Almost all museums hold photographs in their collections, and museum professionals and their audiences engage with photographs in a myriad of ways. Yet despite some three decades of critical museology and photographic theory, and an extensive debate on the politics of representation, outside art museums, almost no critical attention has been given specifically to the roles, purposes and lives of these photographs within museums. This book brings into focus the ubiquitous yet entirely unconsidered work that photographs are put to in museums. The authors' argument is that there is an economy of photographs in museums which is integral to the processes of the museum, and integral to the understanding of museums. The international contributors, drawn from curators and academics, reflect a range of visual and museological expertise. After an introduction setting out the range of questions and problems, the first part addresses broad curatorial strategies and ways of thinking about photographs in museums. Shifting the emphasis from curatorial practices and anxieties to the space of the gallery, this is followed by a series of case studies of exhibitionary practices and the museum strategies that support them. The third section focuses on the role of photographs in the museum articulation of 'difficult histories'. A final section addresses photograph collections in a digital environment. New technologies and new media have transformed the management, address and purposing in photographs in museums, from cataloguing practices to streaming on social media. These growing practices challenge both traditional hierarchies of knowledge in museums and the location of authority about photographs. The volume emerges from PhotoCLEC, a HERA funded project on museums and the photographic legacy of the colonial past in a postcolonial and multicultural Europe.

Perfect Sweat - Mikkel Aaland 2019-02-20

This book contains production stills and more from the Perfect Sweat Sauna Aufguss episode, shot in Italy and Germany in 2018. Perfect Sweat is a nine-part series, documenting the explosive rebirth of ancient sweat bathing traditions that are reviving the human spirit and changing the world. Episodes are based on the book *Sweat*, by Mikkel Aaland published in 1978.

Activity in Red-Dwarf Stars - P.B. Byrne 2013-11-11

IAU Colloquium No. 71 had its immediate origins in a small gathering of people interested in the optical and UV study of flare stars which took place during the 1979 Montreal General Assembly. We recognized that a fundamental change was taking place in the study of these objects. Space-borne instruments (especially IUE and Einstein) and a new generation of ground-based equipment were having a profound effect on the range of investigations it was possible to make. To extract maximum benefit from these new possibilities it would be necessary as never before to have good communication with colleagues in other disciplines, for instance, with atomic and solar physicists. Similarly, studies of phenomena associated with the outer atmospheres of the late-type stars could now hope to give significant insights into certain aspects of solar activity. So, in view of the wide range of backgrounds of those participating, the meeting had an unusually high proportion of invited reviews while most of the contributed papers were presented as posters. It is gratifying that in the short time since the meeting a good deal of correspondence has been received from participants remarking on the success of this format. Once the decision had been taken in principle to hold the meeting, a very considerable amount of work fell on the two organizing committees, viz. the Scientific and Local Organizing Committees. The Scientific Organizing Committee was chaired by D.J. Mullan and consisted of A.D.

Sad Fortunes of the Reverend Amos Barton - George Eliot 2006

But, my dear madam, it is so very large a majority of your fellow-

countrymen that are of this insignificant stamp. At least eighty out of a hundred of your adult male fellow-Britons returned in the last census are neither extraordinarily silly, nor extraordinarily wicked, nor extraordinarily wise; their eyes are neither deep and liquid with sentiment, nor sparkling with suppressed witticisms; they have probably had no hairbreadth escapes or thrilling adventures; their brains are certainly not pregnant with genius, and their passions have not manifested themselves at all after the fashion of a volcano.

Light on Dark Matter - F.P. Israël 2012-12-06

'Light on Dark Matter', held from 10-14 June 1985 in the Dutch seaside resort of Noordwijk, was the first international conference devoted to the results of the all-sky survey by the US-Dutch-UK Infra-Red Astronomical Satellite (IRAS). As such, it was a homage to the scientists, engineers and technicians who conceived, built and operated this extremely successful satellite. That this was generally felt to be the case, was proven by the large number of participants (over 200 from seventeen different nations), the lively discussions, and the great variety of topics presented during the meeting. All this notwithstanding a typical Dutch summer: gale-force winds, heavy cloud cover, and meter-high surf crashing onto a beach on which only the hardy ventured. Most participants contented themselves by watching the lonely seagulls patrolling the North Sea coastline through the panoramic windows of the conference center. Parallel to the IRAS Conference, a Workshop on Infrared Properties of Interstellar Grains was organized by J. M. Greenberg of the Leiden Laboratory Astrophysics Group: a busy shuttling of participants between the Workshop room and the Main Conference Hall showed that many found it hard to choose. A large number of people were involved in making the Conference a success: in the first place the scientific organizers with their valuable advice and the conference speakers, among which I would like to mention Dr. J. H.

Quasars and Gravitational Lenses - 1983

Constructive Quantum Field Theory II - G. Velo 2012-12-06

The seventh Ettore Majorana International School of Mathematical

Physics was held at the Centro della Cultura Scientifica Erice, Sicily, 1-15 July 1988. The present volume collects lecture notes on the session which was entitled Constructive Quantum Field Theory II. The II refers to the fact that the first such school in 1973 was devoted to the same subject. The school was a NATO Advanced Study Institute sponsored by the Italian Ministry of Scientific and Technological Research and the Regional Sicilian Government. At the time of the 1973 Erice School on Constructive Field Theory, the speakers could summarize a decade of effort on the solution of superrenormalizable models in two dimensional space-time leading to the verification of the axioms of relativistic quantum field theory for these examples. The resulting lecture notes have proved to be exceptionally useful and are still in print. In the decade and a half that have elapsed since that time, there has been much hard work with the ultimate objective of providing a rigorous mathematical foundation for the quantum field theories in four dimensional space-time that summarize a large fraction of our current understanding of elementary particle physics: QCD and the electroweak theory. The

lecture notes of the 1988 school record the fact that, although this objective has not been reached, important progress has been made. The ultraviolet stability of Yang-Mills theory in four dimensions has been treated and renormalizable (not superrenormalizable) models in two dimensional space-time, Gross-Neveu models, have been solved.

Across the North Sea - Jelle van Lottum 2007

Daily life in the early modern North Sea region was largely subject to international forces such as wars, trade and changing religion.

Consequently, many people from the North Sea region emigrated to the Dutch Republic. From 1550 to 1800 this small confederation of provinces attracted hundreds of thousands of foreigners to work in its industries, in its households and on board of its ships. This book is about the impact of the Dutch Republic on the geographical mobility of the people in the surrounding countries. Jelle van Lottum works at the Cambridge Group of Population and Social Structure of the University of Cambridge (Geography Department) (UK).
