

Man And Environment Relationship Wikipedia

Sex at Dawn - Christopher Ryan 2021-01-05

The 10th-anniversary edition of the book that radical re-evaluates the origins and nature of human sexuality. Since Darwin's day, we've been told that sexual monogamy comes naturally to our species. Mainstream science — as well as religious and cultural institutions — has maintained that men and women evolved in families in which a man's possessions and protection were exchanged for a woman's fertility and fidelity. In this groundbreaking book, however, Christopher Ryan and Cacilda Jethá argue that human beings evolved in egalitarian groups that shared food, child care, and, often, sexual partners. Weaving together evidence from anthropology, archaeology, primatology, anatomy, and psychosexuality, the authors show how far from human nature monogamy really is. With intelligence and humour, Ryan and Jethá explain how our promiscuous past haunts our contemporary struggles. They explore why many people find long-term fidelity so difficult; why sexual passion tends to fade even as love deepens; why homosexuality persists in the face of standard evolutionary logic; and what the human body reveals about the prehistoric origins of modern sexuality. Shocking, enlightening, and ultimately inspiring, *Sex at Dawn* offers a revolutionary understanding of why we live and love as we do.

The Limits to Growth - 1975

Environmental Justice and Environmentalism - Ronald Sandler 2007

In ten essays, contributors from a variety of disciplines consider such topics as the relationship between the two movements' ethical commitments and activist goals, instances of successful cooperation in U.S. contexts, and the challenges posed to both movements by globalisation and climate change.

The Death of Nature - Carolyn Merchant 2019-09-10

UPDATED 40TH ANNIVERSARY EDITION WITH 2020 PREFACE An examination of the Scientific Revolution that shows how the mechanistic world view of modern science has sanctioned the exploitation of nature, unrestrained commercial expansion, and a new socioeconomic order that subordinates women.

Win-Win Ecology - Michael L. Rosenzweig 2003-04-24

As humanity presses down inexorably on the natural world, people debate the extent to which we can save the Earth's millions of different species without sacrificing human economic welfare. But is this argument wise? Must the human and natural worlds be adversaries? In this book, ecologist Michael Rosenzweig finds that ecological science actually rejects such polarization. Instead it suggests that, to be successful, conservation must discover how we can blend a rich natural world into the world of economic activity. This revolutionary, common ground between development and conservation is called reconciliation ecology: creating and maintaining species-friendly habitats in the very places where people live, work, or play. The book offers many inspiring examples of the good results already achieved. The Nature Conservancy, for instance, has a cooperative agreement with the Department of Defense, with more than 200 conservation projects taking place on more than 170 bases in 41 states. In places such as Elgin Air Force Base, the human uses—testing munitions, profitable timbering and recreation—continue, but populations of several threatened species on the base, such as the long-leaf pine and the red-cockaded woodpecker, have been greatly improved. The Safe Harbor strategy of the Fish & Wildlife Service encourages private landowners to improve their property for endangered species, thus overcoming the unintended negative aspects of the Endangered Species Act. And Golden Gate Park, which began as a system of sand dunes, has become, through human effort, a world of ponds and shrubs, waterfowl and trees. Rosenzweig shows that reconciliation ecology is the missing tool of conservation, the practical, scientifically based approach that, when added to the rest, will solve the problem of preserving Earth's species.

The Territorial Imperative - Robert Ardrey 2014-09-02

A territory is an area of space which an animal guards as its exclusive possession and which it will defend

against all members of its kind. In this revolutionary book Robert Ardrey takes a concept familiar to every biologist, brings together for the first time a fair sampling of all scientific observations of this form of behavior, and demonstrates that man obeys the same laws as does many other animal species. With *African Genesis* Mr Ardrey stirred up enough storm to last an author, one would think, for a lifetime. In *The Territorial Imperative*, however, he explores more deeply and incisively man's evolutionary nature and threatens even more forcefully some of our most precious assumptions. In a time when we attribute to man either no instincts at all, or instincts too weak to be of significance, Mr Ardrey's conclusions concerning the instinctual force exerted on human life by territory will undoubtedly raise an even greater storm. The author concludes, for example, that a common cause for war lies in our ignorance of man's animal nature - in particular, in the aggressor's ignorance of the enormous animal energies which his intrusion will release in a seemingly weak territorial defender. In a quite different vein, he concludes that family loyalty and responsibility, in men no less than in gibbons or beavers or robins, rests on joint attachment to a private territory. Perhaps the author's most far-reaching, most controversial conclusion is that morality - our willingness to make personal sacrifice for interests larger than ourselves - has its origins in dim evolutionary beginnings, is as essential to the life of the animal as to the lives of men, and could probably not exist in the human species without property either privately or jointly defended and the ultimate command of the territorial imperative. Like its predecessor, *The Territorial Imperative* is a work of wit, of literary wealth, of high adventure. Again the author draws on his inexhaustible knowledge of animal ways, and again his wife presents her intriguing sketches of animal life. But this time Mr Ardrey takes his readers on far deeper excursions into the ancient animal world, and on far deeper penetrations of the contemporary human wilderness. While evolutionary science has advanced markedly since Ardrey's times, his insights on human behavior have a timeless quality and *The Territorial Imperative* remains a classic reference for anyone wishing to begin an adventure exploring life's biggest questions. Praise for the 1966 edition: "One of the most exciting books about the nature of man that has ever been presented." - *Newsday* "Robert Ardrey's vision of man's future is as hopeful as any doctrinaire utopian's, and, in my opinion, a good deal more interesting... He ranks as the lyric poet of human evolution, a superb writer with a special vision." - E. O. Wilson "One of the most intellectually exciting books of humanized sciences we have ever recommended in the Club's long history, a fascinating inquiry into the nature of the human animal, and an invaluable, as well as beautifully written, treatise on recent extensions of the boundaries of the biological sciences." - Clifton Fadiman, *Book-of-the-Month Club News* "This is a fascinating, stimulating, fruitful, thought-provoking, and irritating book." - Dr Abraham Maslow, Department of Psychology, Brandeis University "Few books are as fresh in concept, lively in style, and potentially important in understanding human behavior." - *Wall Street Journal* "Ardrey belongs to the long and distinguished tradition of first-rate scientific amateurs... the love of science, especially biological science, animates every page." - *The New Yorker*

The Population Bomb - Paul R. Ehrlich 1971

Overshoot - William R. Catton 1982-06

Our day-to-day experiences over the past decade have taught us that there must be limits to our tremendous appetite for energy, natural resources, and consumer goods. Even utility and oil companies now promote conservation in the face of demands for dwindling energy reserves. And for years some biologists have warned us of the direct correlation between scarcity and population growth. These scientists see an appalling future riding the tidal wave of a worldwide growth of population and technology. A calm but unflinching realist, Catton suggests that we cannot stop this wave - for we have already overshot the Earth's capacity to support so huge a load. He contradicts those scientists, engineers, and technocrats

who continue to write optimistically about energy alternatives. Catton asserts that the technological panaceas proposed by those who would harvest from the seas, harness the winds, and farm the deserts are ignoring the fundamental premise that "the principals of ecology apply to all living things." These principles tell us that, within a finite system, economic expansion is not irreversible and population growth cannot continue indefinitely. If we disregard these facts, our sagging American Dream will soon shatter completely.

LEVIATHAN (Complete Edition) - Thomas Hobbes 2018-11-02

This eBook edition of "Leviathan" has been formatted to the highest digital standards and adjusted for readability on all devices. Leviathan or The Matter, Forme and Power of a Common-Wealth Ecclesiasticall and Civil—commonly referred to as Leviathan—is a book written by Thomas Hobbes. Its name derives from the biblical Leviathan. The work concerns the structure of society and legitimate government, and is regarded as one of the earliest and most influential examples of social contract theory. Leviathan ranks as a classic western work on statecraft comparable to Machiavelli's *The Prince*. Written during the English Civil War (1642–1651), Leviathan argues for a social contract and rule by an absolute sovereign. Hobbes wrote that civil war and the brute situation of a state of nature ("the war of all against all") could only be avoided by strong, undivided government.

The Giving Tree - Shel Silverstein 2014-02-18

As *The Giving Tree* turns fifty, this timeless classic is available for the first time ever in ebook format. This digital edition allows young readers and lifelong fans to continue the legacy and love of a classic that will now reach an even wider audience. "Once there was a tree...and she loved a little boy." So begins a story of unforgettable perception, beautifully written and illustrated by the gifted and versatile Shel Silverstein. This moving parable for all ages offers a touching interpretation of the gift of giving and a serene acceptance of another's capacity to love in return. Every day the boy would come to the tree to eat her apples, swing from her branches, or slide down her trunk...and the tree was happy. But as the boy grew older he began to want more from the tree, and the tree gave and gave and gave. This is a tender story, touched with sadness, aglow with consolation. Shel Silverstein's incomparable career as a bestselling children's book author and illustrator began with *Lafcadio, the Lion Who Shot Back*. He is also the creator of picture books including *A Giraffe and a Half, Who Wants a Cheap Rhinoceros?*, *The Missing Piece*, *The Missing Piece Meets the Big O*, and the perennial favorite *The Giving Tree*, and of classic poetry collections such as *Where the Sidewalk Ends*, *A Light in the Attic*, *Falling Up*, *Every Thing On It*, *Don't Bump the Glump!*, and *Runny Rabbit*. And don't miss the other Shel Silverstein ebooks, *Where the Sidewalk Ends* and *A Light in the Attic!*

The Man Who Planted Trees - Jean Giono 2008-12

A solitary man plants a forest over many years, rejuvenating a barren wasteland.

Life on the Brink - Philip Cafaro 2012-12-01

Life on the Brink aspires to reignite a robust discussion of population issues among environmentalists, environmental studies scholars, policymakers, and the general public. Some of the leading voices in the American environmental movement restate the case that population growth is a major force behind many of our most serious ecological problems, including global climate change, habitat loss and species extinctions, air and water pollution, and food and water scarcity. As we surpass seven billion world inhabitants, contributors argue that ending population growth worldwide and in the United States is a moral imperative that deserves renewed commitment. Hailing from a range of disciplines and offering varied perspectives, these essays hold in common a commitment to sharing resources with other species and a willingness to consider what will be necessary to do so. In defense of nature and of a vibrant human future, contributors confront hard issues regarding contraception, abortion, immigration, and limits to growth that many environmentalists have become too timid or politically correct to address in recent years. Ending population growth will not happen easily. Creating genuinely sustainable societies requires major change to economic systems and ethical values coupled with clear thinking and hard work. *Life on the Brink* is an invitation to

join the discussion about the great work of building a better future. Contributors: Albert Bartlett, Joseph Bish, Lester Brown, Tom Butler, Philip Cafaro, Martha Campbell, William R. Catton Jr., Eileen Crist, Anne Ehrlich, Paul Ehrlich, Robert Engelman, Dave Foreman, Amy Gulick, Ronnie Hawkins, Leon Kolankiewicz, Richard Lamm, Jeffrey McKee, Stephanie Mills, Roderick Nash, Tim Palmer, Charmayne Palomba, William Ryerson, Winthrop Staples III, Captain Paul Watson, Don Weeden, George Wuerthner.

Walden - Henry David Thoreau 1996-01-01

A detailed account of one man's sojourn living off the land.

Biophilia - Edward O. WILSON 2009-06-30

Biophilia is Edward O. Wilson's most personal book, an evocation of his own response to nature and an eloquent statement of the conservation ethic. Wilson argues that our natural affinity for life—biophilia—is the very essence of our humanity and binds us to all other living species.

The War of the Worlds - H. G. Wells 2017-01-01

When a meteorite lands in Surrey, the locals don't know what to make of it. But as Martians emerge and begin killing bystanders, it quickly becomes clear—England is under attack. Armed soldiers converge on the scene to ward off the invaders, but meanwhile, more Martian cylinders land on Earth, bringing reinforcements. As war breaks out across England, the locals must fight for their lives, but life on Earth will never be the same. This is an unabridged version of one of the first fictional accounts of extraterrestrial invasion. H. G. Wells's military science fiction novel was first published in book form in 1898, and is considered a classic of English literature.

Gaia - James Lovelock 2016

First published 1979, first issued as an Oxford University paperback 1982.

The Sixth Extinction - Elizabeth Kolbert 2014-01-01

"Over the last half billion years, there have been five major mass extinctions, when the diversity of life on Earth suddenly and dramatically contracted. Scientists are currently monitoring the sixth extinction, predicted to be the most devastating since the asteroid impact that wiped out the dinosaurs. This time around the cataclysm is us. In this book the author tells us why and how human beings have altered life on the planet in a way no species has before. She provides a moving account of the disappearances of various species occurring all around us and traces the evolution of extinction as concept, from its first articulation by Georges Cuvier in revolutionary Paris up to Lyell and Darwin, and through the present day. The sixth extinction is likely to be mankind's most lasting legacy, compelling us to rethink the fundamental question of what it means to be human". -- Back cover.

The Voice of the Earth - Theodore Roszak 2001-01-01

What is the bond between the human psyche and the living planet that nurtured us, and all of life, into existence? What is the link between our own mental health and the health of the greater biosphere? In this "bold, ambitious, philosophical essay" (Publishers Weekly), historian and cultural critic Roszak explores the relationships between psychology, ecology, and new scientific insights into systems in nature. Drawing on our understanding of the evolutionary, self-organizing universe, Roszak illuminates our rootedness in the greater web of life and explores the relationship between our own sanity and the larger-than-human world. *The Voice of the Earth* seeks to bridge the centuries-old split between the psychological and the ecological with a paradigm which sees the needs of the planet and the needs of the person as a continuum. The Earth's cry for rescue from the punishing weight of the industrial system we have created is our own cry for a scale and quality of life that will free us to become whole and healthy. This second edition contains a new afterword by the author.

Man and Nature - George P. Marsh 2021-04-14

This landmark text analyzes the impact of human action on nature by linking the environmental degradation of ancient Mediterranean civilization to the United States of the 1800s. As profoundly topical today as it was in 1864.

[Evidence as to Man's Place in Nature](#) - Thomas Henry Huxley 1863
