Comprehensive Review of Headache Medicine - Morris Levin 2008-05-08

Headache Medicine has recently become an official medical subspecialty. Practitioners who specialize in the field come from many different backgrounds including neurology, internal medicine, anesthesiology, rehabilitation medicine, family medicine, psychiatry, dentistry and others. A great deal of research is being done in headache medicine and as a result, the field is one which is growing rapidly in every way. Interestingly, most patients with headache are not being treated by specialists in headache medicine, in large part because of the vast numbers of patients requiring medical attention for headache disorders, and the relatively small number of bona fide specialists. Comprehensive Review of Headache Medicine is the first concise manual aimed at the bulk of skilled practitioners taking care of the major share of headache sufferers who wish to understand the important concepts of diagnosis, treatment and prognosis in this complex field. The organization of this book reflects the Curriculum for Headache Medicine designed by the United Council for Neurologic Subspecialties (UCNS) which is the organization responsible for accrediting

Headache Medicine training programs and accrediting individual practitioners. The content of the book also mirrors that of the UCNS board examination. The book consists of 4 parts: Part 1- Headache Medicine Basic Science; Part 2 - Diagnosis of Primary Headache Disorders; Part 3 - Diagnosis of Secondary Headache Disorders; and Part 4 - Headache Treatment. Each chapter is written in a concise, user-friendly way while simultaneously presenting cutting edge information about the diagnosis and treatment of headache. Each chapter also includes key tables and illustrations relevant to the study of headache medicine and review questions as a study resource at the end of the chapter. The editor Dr. Morris Levin is a charter diplomat of the UCNS HM examination and has directed board review courses for the American Headache Society and Headache Cooperative of New England. All of the eligible chapter authors have taken and passed this examination as well. The International Classification of Headache Disorders is used throughout this text and a concerted effort has been made to base content on evidence when available, rather than personal practices. Each chapter is intended as a stand alone monograph and as a result the book can be read in virtually any order.

Handbook of Headache - Paolo Martelletti 2011-08-14

Headache disorders are among the most common disorders of the nervous system. They are pandemic and, in many cases, they are recurrent and can accompany the patient for the whole life. These disorders impose

a substantial burden on headache sufferers, on their families and on society: the individual impact is measured by the frequency and severity of attacks, while the societal burden is measured in terms of loss of activity at work and school as well as of costs for the health system. As a matter of facts, headaches are ranked in the top ten, and maybe the top five, causes of disability worldwide: they are therefore extraordinarily common. Population-based studies have mostly focused on migraine, which, even if it is the most frequently studied headache disorder, is not the most common. Other types of headache, such as the more prevalent TTH and sub-types of the more disabling chronic daily headache, have so far received less attention and need to be better investigated. This book will provide a useful tool to a wide medical population, who is required specific skills to diagnose and manage these frequent and often disabling disorders. Furthermore, it could also represent a compendium for medical students who are usually introduced to this topic through multidisciplinary university programmes.

Management of Subarachnoid Hemorrhage - Adel E. Ahmed Ganaw 2021-11-26

This book focuses on subarachnoid hemorrhage (SAH), describing in detail the neurophysiology, anatomy, epidemiology, grading, anesthesia management, coiling and interventional treatment of this dangerous disease. Written by leading international experts, it highlights the state-of-the-art techniques for the diagnosis and treatment (non-surgical and surgical) of SAH and the clinical variations. It also examines the reliability of the new techniques versus the standard clinical methods to predict problems related to SAH and its recent diagnosis and management. The book starts with a brief discussion of the epidemiology of SAH, cerebral circulation, anatomy of brain blood vessels and neurophysiology related to this fatal disease. Then, in the following chapters it covers grading of subarachnoid hemorrhage, anesthesia management of SAH, treatment, subarachnoid hemorrhage coiling and radiological intervention. Lastly, it explores surgical treatment of intracranial aneurysms in more detail, and addresses complications, critical care management and headache in SAH, traumatic SAH and prognosis. Featuring numerous images, tables, schema, illustrations and videos, the book is intended for junior and senior anesthesiologists, neuroscientists, intervention radiologists, intensivists and neurosurgeons.

Non-Migraine Primary Headaches in Medicine - Paolo Martelletti 2023-03-11

This book on tension-type headache is the second machine-generated scientific book in medicine published by Springer and reflects a new publication format which focuses on literature reviews: state-of-the-art computer algorithms were applied to select relevant sources from Springer Nature journal, rearrange them in a topical order, and provide short summaries of these articles. The result is the auto-summarization of current texts, organized by means of a similarity-based clustering routine in coherent chapters and sections. The human intervention of a world-renowned expert in this field grants the scientific soundness and appropriate organization of the contents identified. The AI-based approach seemed especially suitable to provide an innovative perspective as the topics are indeed both complex, interdisciplinary, and multidisciplinary, as is tension-type headache, the most diffuse among the chronic non communicable diseases. The result of this innovative process will be of help especially for readers with limited time, interested in migraine and wishing to learn more about the subject quickly and if they are new to the topic. Springer seeks to support anyone who needs a fast and effective start in their content discovery journey, from the undergraduate student exploring interdisciplinary content, to Master- or PhD-thesis developing research questions, to the practitioner seeking support materials, this book can serve as an inspiration, to name a few examples.
