

Aids Sexual Behavior And Intravenous Drug Use

AIDS - National Research Council 1990-02-01
Expanding on the 1989 National Research Council volume AIDS, Sexual Behavior, and Intravenous Drug Use, this book reports on changing patterns in the distribution of cases and the results of intervention efforts under way. It focuses on two important subpopulations that are becoming more and more at risk: adolescents and women. The committee also reviews strategies to protect blood supplies and to improve the quality of surveys used in AIDS research. AIDS: The Second Decade updates trends in AIDS cases and HIV infection among the homosexual community, intravenous drug

users, women, minorities, and other groups; presents an overview of a wide range of behavioral intervention strategies directed at specific groups; discusses discrimination against people with AIDS and HIV infection; and presents available data on the proportion of teenagers engaging in the behaviors that can transmit the virus and on female prostitutes and HIV infection.

Community-based AIDS Prevention - National AIDS Demonstration Research Project (U.S.). National Meeting 1991

Handbook on Risk of AIDS - Barry S. Brown

1993-10-11

Intravenous drug users account for nearly one-third of the current AIDS cases in the United States--second only to gay males--and are responsible for 72 percent of female and 59 percent of pediatric cases of AIDS. Thus the National Institute of Drug Abuse launched a major effort in 1987 to locate hidden users and to see how they function and to evaluate strategies and community-based programs in 50 cities and 60 nearby communities around the country in order to lower risks to IV users and to reduce the dangers that they pose to others in the population. Brown and Beschner present the very latest findings and come to well-tested conclusions about how to change behaviors positively. This handbook is written for use in college, university, and professional libraries and for students, teachers, policymakers, and practitioners in public health service and in public policy at all governmental levels to study carefully. Brown and Beschner open with an

introduction showing how injection drug users and their sexual partners are at risk for aids. Part I describes the spread of AIDS in the United States and Puerto Rico. Part II depicts patterns of injection drug and crack use and their effect on sex partners. Part III deals with gender issues. Part IV goes into demographic and background factors. Part V discusses key issues in the use of drug abuse treatment. Part VI analyzes outreach and behavior change strategies. And Part VII looks into how risk can be reduced as a result of outreach and specific intervention strategies. The final chapter comes to some conclusions about the effectiveness of various interventions by the National AIDS Demonstration Research Project. Background readings also add to the importance of this major reference.

Drug Use Practices and Sexual Behavior Among IV Drug Users and Their Sexual Partners in Houston - Brenda Lou Haile 1988

Sexual Attitudes and Behaviours - Bruce Rollins 1989

This bibliography and review of the literature on sexual behaviors and attitudes toward sexual behavior was developed to contribute to an understanding of changes in attitudes toward sexual behaviors and in community patterns of sexual behaviors, and to assist in the development of Acquired Immune Deficiency

Syndrome (AIDS) education programs. It reports on Australian and major overseas studies describing community patterns of sexual behavior, with special reference to the period since 1978. It includes a review and analysis of the results of these studies and reports on the reliability and validity of survey results. Comments are made concerning the implications of the survey results for AIDS prevention and community education strategies and programs for both the general community and specific subgroups (intravenous drug users, bisexual and homosexual males, and adolescents). Sources for the information in this review include commercial polls and sample surveys, work commissioned by governments and their agencies, studies by voluntary agencies, and academic studies. Individual sections of the review focus on: (1) patterns of sexual behavior from the Kinsey reports of 1948 and 1953 to the 1970s; (2) patterns of sexual behavior found in Australia studies between 1980 and 1988; (3)

cohabitation; (4) heterosexual adolescents and the risk of human immunodeficiency virus infection; (5) intravenous drug users, AIDS, and behavior change; (6) the arrival of AIDS and patterns of homosexual behavior; (7) behavioral changes in the homosexual community in response to the threat of AIDS; (8) research methodologies; and (9) a summary of findings. A 29-page bibliography is included. (NB)

AIDS, Sexual Behavior, and Intravenous Drug Use - National Research Council 1989-02-01
The AIDS virus is spread by human behaviors enacted in a variety of social situations. In order to prevent further infection, we need to know more about these behaviors. This volume explores what is known about the number of

people infected, risk-associated behaviors, facilitation of behavioral change, and barriers to more effective prevention efforts.

AIDS - Charles F. Turner 1989

A Disease of Society - 1990

[Preventing HIV Infection Among Injecting Drug Users in High-Risk Countries](#) - Institute of Medicine 2006-12-20

Drug dependence is a complex, chronic, relapsing condition that is often accompanied by severe health, psychological, economic, legal, and social consequences. Injecting drug users are particularly vulnerable to HIV and other bloodborne infections (such as hepatitis C) as a result of sharing contaminated injecting equipment. All drug-dependent individuals, including injecting drug users (IDUs), may be at increased risk of HIV infection because of high-risk sexual behaviors. There are an estimated 13.2 million injecting drug users (IDUs) world-

wide-78 percent of whom live in developing or transitional countries. The sharing of contaminated injecting equipment has become a major driving force of the global AIDS epidemic and is the primary mode of HIV transmission in many countries. In some cases, epidemics initially fueled by the sharing of contaminated injecting equipment are spreading through sexual transmission from IDUs to non-injecting populations, and through perinatal transmission to newborns. Reversing the rise of HIV infections among IDUs has thus become an urgent global public health challenge-one that remains largely unmet. In response to this challenge, the Institute of Medicine convened a public workshop in Geneva in December 2005 to gather information from experts on IDU-driven HIV epidemics in the most affected regions of the world with an emphasis on countries throughout Eastern Europe, the Commonwealth of Independent States, and significant parts of Asia. Experts from other regions also provided

information on their experiences in preventing HIV infection among IDUs. This report provides a summary of the workshop discussions. Preventing HIV Infection among Injecting Drug Users in High Risk Countries describes the evidence on the intermediate outcomes of drug-related risk and sex-related risk prior to examining the impact on HIV transmission. This report focuses on programs that are designed to prevent the transmission of HIV among injecting drug users. These programs range from efforts to curtail non-medical drug use to those that encourage reduction in high-risk behavior among drug users. Although the report focuses on HIV prevention for IDUs in high-risk countries, the Committee considered evidence from countries around the world. The findings and recommendations of this report are also applicable to countries where injecting drug use is not the primary driver, but in which injection drug use is nevertheless associated with significant HIV transmission.

AIDS and Alcohol/Drug Abuse - Dennis Fisher
2022-10-30

AIDS is the number one health issue facing the nation today. The way in which AIDS relates to substance abuse is explored by drug abuse researchers in this timely volume. A major focus of *AIDS and Alcohol/Drug Abuse* is on the problems of conducting AIDS research on racial minorities in this country. Bringing together experts in the field, this volume examines the specific obstacles and challenges researchers have faced in assessing and addressing the needs of underserved populations and maps routes and procedures that can improve both research and available health care services. This unique volume also focuses on aspects of HIV infection that have received little attention elsewhere. It includes the first information published in the open literature about intravenous drug use in Alaska. Another chapter highlights some little-known facts that relate substance abuse to HIV infection in the

American Indian/Alaskan Native population, among whom--it has been predicted--a devastating epidemic of HIV infection is likely. Problems with prevention, research, and treatment of individuals who are both intravenous drug users and who are infected with HIV are explored. Other chapters look at the transmission of HIV infection--by gay men who are alcoholics and by intravenous drug users. *AIDS and Alcohol/Drug Abuse* ends with hopeful chapter for AIDS prevention. Readers interested in the relationship of intravenous drug use and HIV infection, particularly among racial and ethnic minorities, will find this to be a practical, readable book. In particular, substance abuse counselors and researchers, and anyone involved in the AIDS prevention movement will find a valuable wealth of information.
