**The American Psychiatric Association Practice Guidelines for the Psychiatric Evaluation of Adults, Third Edition**

American Psychiatric Association 2015-07-29 Since the publication of the Institute of Medicine (IOM) report Clinical Practice Guidelines We Can Trust in 2011, there has been an increasing emphasis on assuring that clinical practice guidelines are trustworthy, developed in a transparent fashion, and based on a systematic review of the available research evidence. To align with the IOM recommendations and to meet the new requirements for inclusion of a guideline in the National Guidelines Clearinghouse of the Agency for Healthcare Research and Quality (AHRQ), American Psychiatric Association (APA) has adopted a new process for practice guideline development. Under this new process APA's practice guidelines also seek to provide better clinical utility and usability. Rather than a broad overview of treatment for a disorder, new practice guidelines focus on a set of discrete clinical questions of relevance to an overarching subject area. A systematic review of evidence is conducted to address these clinical questions and involves a detailed assessment of individual studies. The quality of the overall body of evidence is also rated and is summarized in the practice guideline. With the new process, recommendations are determined by weighing potential benefits and harms of an intervention in a specific clinical context. Clear, concise, and actionable recommendation statements help clinicians to incorporate recommendations into clinical practice, with the goal of improving quality of care. The new practice guideline format is also designed to be more user friendly by dividing information into modules on specific clinical questions. Each module has a consistent organization, which will assist users in finding clinically useful and relevant information quickly and easily. This new edition of the practice guidelines on psychiatric evaluation

for adults is the first set of the APA's guidelines developed under the new guideline development process. These guidelines address the following nine topics, in the context of an initial psychiatric evaluation: review of psychiatric symptoms, trauma history, and treatment history; substance use assessment; assessment of suicide risk; assessment for risk of aggressive behaviors; assessment of cultural factors; assessment of medical health; quantitative assessment; involvement of the patient in treatment decision making; and documentation of the psychiatric evaluation. Each guideline recommends or suggests topics to include during an initial psychiatric evaluation. Findings from an expert opinion survey have also been taken into consideration in making recommendations or suggestions. In addition to reviewing the available evidence on psychiatry evaluation, each guideline also provides guidance to clinicians on implementing these recommendations to enhance patient care.

**Mohs Micrographic Surgery** Stephen N. Snow 2004 Mohs Micrographic Surgery, an advanced treatment procedure for skin cancer, offers the highest potential for recovery--even if the skin cancer has been previously treated. This procedure is a state-of-

the-art treatment in which the physician serves as surgeon, pathologist, and reconstructive surgeon. It relies on the accuracy of a microscope to trace and ensure removal of skin cancer down to its roots. This procedure allows dermatologists trained in Mohs Surgery to see beyond the visible disease and to precisely identify and remove the entire tumor, leaving healthy tissue unharmed. This procedure is most often used in treating two of the most common forms of skin cancer: basal cell carcinoma and squamous cell carcinoma. The cure rate for Mohs Micrographic Surgery is the highest of all treatments for skin cancer--up to 99 percent even if other forms of treatment have failed. This procedure, the most exact and precise method of tumor removal, minimizes the chance of regrowth and lessens the potential for scarring or disfigurement

Department of Health and Human Services 2019-11-23 The Federal Guidelines for Opioid Treatment Programs (Guidelines) describe the Substance Abuse and Mental Health Services Administration's (SAMHSA) expectation of how the federal opioid treatment standards found in Title 42 of the Code of Federal Regulations Part 8 (42 CFR 8) are to be satisfied by opioid treatment programs (OTPs). Under these federal regulations, OTPs are required to have current valid accreditation status, SAMHSA certification, and Drug Enforcement Administration (DEA) registration before they are able to administer or dispense opioid drugs for the treatment of opioid addiction.

**Terrorizing Gender** Mia Fischer 2019-11-01 The increased visibility of transgender people in mainstream media, exemplified by Time magazine's declaration that 2014 marked a "transgender tipping point," was widely believed to signal a civil rights breakthrough for trans communities in the United States. In Terrorizing Gender Mia Fischer challenges this narrative of

progress, bringing together transgender, queer, critical race, legal, surveillance, and media studies to analyze the cases of Chelsea Manning, CeCe McDonald, and Monica Jones. Tracing how media and state actors collude in the violent disciplining of these trans women, Fischer exposes the traps of visibility by illustrating that dominant representations of trans people as deceptive, deviant, and threatening are integral to justifying, normalizing, and reinforcing the state-sanctioned violence enacted against them. The heightened visibility of transgender people, Fischer argues, has actually occasioned a conservative backlash characterized by the increased surveillance of trans people by the security state, evident in debates over bathroom access laws, the trans military ban, and the rescission of federal protections for transgender students and workers. Terrorizing Gender concludes that the current moment of trans visibility constitutes a contingent cultural and national belonging, given the gendered and racialized violence that the state continues to enact against trans communities, particularly those of color.

*The Best Intentions* Institute of Medicine 1995-07-02 Experts estimate that nearly 60 percent of all U.S. pregnancies and 81 percent of pregnancies among adolescents are unintended. Yet the topic of preventing these unintended pregnancies has long been treated gingerly because of personal sensitivities and public controversies, especially the angry debate over abortion.

Additionally, child welfare advocates long have overlooked the connection between pregnancy planning and the improved well-being of families and communities that results when children are wanted. Now, current issues health care and welfare reform, and the new international focus on population are drawing attention to the consequences of unintended pregnancy. In this climate *The Best Intentions* offers a timely exploration of family planning issues from a distinguished panel of experts. This committee sheds much-needed light on the questions and controversies surrounding unintended pregnancy. The book offers specific recommendations to put the United States on par with

other developed nations in terms of contraceptive attitudes and policies, and it considers the effectiveness of over 20 pregnancy prevention programs. The Best Intentions explores problematic definitions of "unintended" versus "unwanted" versus "mistimed" and presents data on pregnancy rates and trends. The book also summarizes the health and social consequences of unintended pregnancies, for both men and women, and for the children they bear. Why does unintended pregnancy occur? In discussions of "reasons behind the rates," the book examines Americans' ambivalence about sexuality and the many other social, cultural, religious, and economic factors that affect our approach to contraception. The committee explores the complicated web of peer pressure, life aspirations, and notions of romance that shape an individual's decisions about sex, contraception, and pregnancy. And the book looks at such practical issues as the attitudes of doctors toward birth control and the place of contraception in both health insurance and "managed care." The Best Intentions offers frank discussion, synthesis of data, and policy recommendations on one of today's most sensitive social topics. This book will be important to policymakers, health and social service personnel, foundation executives, opinion leaders, researchers, and concerned individuals.

Third Sex, Third Gender Gilbert Herdt 2020-10-27 Most modern discussions of the relationship of biological sex to gender presuppose that there are two genders, male and female, founded on the two biological sexes. But not all cultures share this essentialist assumption, and even Western societies have not always embraced it. Bringing together historical and anthropological studies, Third Sex, Third Gender challenges the usual emphasis on sexual dimorphism and reproduction, providing a unique perspective on the various forms of socialization of people who are neither "male" nor "female." The existence of a third sex or gender enables us to understand how Byzantine palace eunuchs and Indian hijras met the criteria of special social roles that necessitated practices such as self-castration, and how intimate and forbidden desires were expressed among the Dutch Sodomites in the early modern period, the Sapphists of eighteenth-century England, or the so-called hermaphrodite-homosexuals of nineteenth-century Europe and America. By contextualizing these practices and by allowing these bodies, meanings, and desires to emerge, Third Sex, Third Gender provides a new way to think about sex and gender systems that is crucial to contemporary debates within the social sciences.

**Body Contouring** Melvin A. Shiffman 2010-09-14 As plastic surgeons, we seek to combine art and science to improve the results we see in clinical practice. Through our artistic sensibilities, we try to understand and obtain aesthetic results. Scientific analysis provides the data to predict which approaches will be successful and safe. Both art and science connote a high level of skill or mastery. At the present time, our literature is replete with descriptions of specific procedures for body contouring. However, there remains a need for a definitive reference describing the basic principles to address the complete scope of body contouring including the postbariatric patient and their plastic surgery deformities. Dr. Shiffman and Dr. Di Giuseppe saw this need and sought to address the needs of plastic surgeons faced with the complexities of body contouring surgery. This is a comprehensive text aimed at providing multiple perspectives. The numerous sections, which include a- positivity and lipolysis, the breast, abdomen, chest, and buttocks, the

extremities, and liposuction, offer various approaches from the foremost authors. Indeed it is with a tremendous amount of skill and mastery that Dr. Shiffman and Dr. Di Giuseppe have successfully edited and collated the numerous contributions to this work. In addition, they have authored individually or, in collaboration, over a dozen of the 87 total chapters. Their combined work as editors and authors are evident throughout their text. The final result is a comprehensive contribution that will benefit all plastic surgeons seeking to improve their approach to body contouring.

NOMESCO Classification of Surgical Procedures Henning Bay-Nielsen 2000

The Health of Lesbian, Gay, Bisexual, and Transgender People Institute of Medicine 2011-06-24 At a time when lesbian, gay, bisexual, and transgender individuals--often referred to under the umbrella acronym LGBT--are becoming more visible in society and more socially acknowledged, clinicians and researchers are faced with incomplete information about their health status. While LGBT populations often are combined as a single entity for research and advocacy purposes, each is a distinct population group with its own specific health needs. Furthermore, the experiences of LGBT individuals are not uniform and are shaped by factors of race, ethnicity, socioeconomic status, geographical location, and age, any of which can have an effect on health-

related concerns and needs. The Health of Lesbian, Gay, Bisexual, and Transgender People assesses the state of science on the health status of LGBT populations, identifies research gaps and opportunities, and outlines a research agenda for the National Institute of Health. The report examines the health status of these populations in three life stages: childhood and adolescence, early/middle adulthood, and later adulthood. At each life stage, the committee studied mental health, physical health, risks and protective factors, health services, and contextual influences. To advance understanding of the health needs of all LGBT individuals, the report finds that researchers need more data about the demographics of these populations, improved methods for collecting and analyzing data, and an increased participation of sexual and gender minorities in research. The Health of Lesbian, Gay, Bisexual, and Transgender People is a valuable resource for policymakers, federal agencies including the National Institute of Health (NIH), LGBT advocacy groups, clinicians, and service providers.

Cancer Surgery in the Elderly John D. Spiliotis 2011 The significant advances in medical, surgical and social care during the last two decades in the western world have resulted in a considerable prolongation of life expectancy. The decision making for providing the appropriate surgical care in these patients is a difficult and multivariant task. This book examines cancer surgery in elderly patients, as well as a need for a more 'personalised' approach and a thorough discussion of their disease treatment and status of life. *They're Chasing Us Away from Sport* 2020-12-04
