**The Chickens Fight Back** -  
David Waltner-Toews  
2009-03-01

If you have any interest at all in epidemiology, modern medicine, or the survival of the human race, do read *The Chickens Fight Back* —Georgia Straight Emerging diseases like mad cow, SARS, and avian flu are — for the moment, at least — far more prevalent in animals than in humans. Still, the knowledge that measles, TB, and smallpox were at one time “emerging” diseases that eventually made a permanent, and quite deadly, jump to humans gives epidemiologists pause. This book examines the various groups of animal diseases, explains what attracts them to the human population — from food to sex to living conditions — and offers suggestions for keeping them at bay. It also points out that diseases must be looked at from an ecological, cultural, and economic point of view as well as from a biological standpoint. Cooking meat till its well done and slathering on insect repellent for a hike in the woods are effective preventative measures, but as the author notes, it’s more

important to fundamentally rethink humankind’s place in the world.

[The Origin of Feces](#) - David Waltner-Toews 2013-06-13

An entertaining and enlightening exploration of why waste matters, this cultural history explores an often ignored subject matter and makes a compelling argument for a deeper understanding of human and animal waste. Approaching the subject from a variety of perspectives-- evolutionary, ecological, and cultural--this examination shows how integral excrement is to biodiversity, agriculture, public health, food production and distribution, and global ecosystems. From primordial ooze, dung beetles, bug frass, cat scats, and flush toilets to global trade, pandemics, and energy, this is the awesome, troubled, uncensored story of feces.

vegetables have grown rapidly in recent years, due in large part to advances in vegetable processing technology. This 448-page book provides a detailed, expert guide to current methods of vegetable processing. The authoritative presentations were prepared by a team of leading international food specialists. The text is organized for easy reference and supplemented with hundreds of photographs and diagrams illustrating procedures and equipment. Hundreds of tables provide useful reference data in convenient form. Each chapter includes a section of extensive references for additional research on each subject.

*The Fifty Finest Athletes of the 20th Century* - Robert J.

Condon 2004-05-14

These superachievers, from 13 sports, rose to a level of performance yet to be equalled, played a sport so well it was played differently, dominated a sport for a decade or more, or played several sports extremely well. A sampling of those who made

the cut—Gordie Howe, Jim Thorpe, Christy Mathewson, Martina Navratilova, Pele, Joe Louis, Sonja Henie, Bobby Orr, and Mark Spitz. The book has a section for the top 20 athletes followed by a section of the “runners-up.” The final entry is devoted to the greatest athlete of the 20th century, as determined by the author. Each entry gives the name of the athlete, nickname (such as Wilt the Stilt), date of birth and death, photographs and career summary.

*A Conspiracy of Chickens* -

David Waltner-Toews

2022-11-08

In this wide-ranging memoir Waltner-Toews shares his joys and misadventures with chickens, and reflects on our history and relationship with chickens and urban animals and the ecosystem that contains us all. Funny, wise and thought-provoking, *A Conspiracy of Chickens* takes chickens seriously and asks the reader to do the same.

**Eat the Beetles!** - David Waltner-Toews 2017-05-09  
“Provides a sturdy literary exoskeleton to the field of human insectivory . . . it entertains as it enlightens” (Daniella Martin, author of *Edible*). Meet the beetles: there are millions and millions of them and many fewer of the rest of us—mammals, birds,

and reptiles. Since before recorded history, humans have eaten insects. While many get squeamish at the idea, entomophagy—people eating insects—is a possible way to ensure a sustainable and secure food supply for the eight billion of us on the planet. Once seen as the great enemy of human civilization, destroying our crops and spreading plagues, we now see insects as marvelous pollinators of our food crops and a potential source of commercial food supply. From upscale restaurants where black ants garnish raw salmon to grubs as pub snacks in Paris and Tokyo, from backyard cricket farming to high-tech businesses, *Eat the Beetles!* weaves these cultural, ecological, and evolutionary narratives to provide an accessible and humorous exploration of entomophagy. “Waltner-Toews punctuates this serious subject with his quirky humour . . . *Eat the Beetles!* is an essential part of a growing buzz.” —Toronto Star “An excellent read for

those interested in multiple perspectives on the issue of entomophagy, digging deep into science and math with flair and irreverence.” —Scene Magazine “When it comes to the future of insects as food for humans and livestock, Waltner-Toews walks the line between skepticism and optimism in an intelligent, witty, and provocative analysis.” —Jeff Lockwood, author of *The Infested Mind* “Full of humor and science, this edible insect book is definitely a must read!” —EntoMove Project

**The Essential HIV Treatment Fact Book** - Laura Pinsky 1992-11

The authors of *The Essential AIDS Fact Book* suggest ways to control the HIV virus while more effective treatments are being developed. Sections include HIV Antibody Testing; Obtaining Treatment; Health Care Strategies; Drugs that Help; Living with HIV; Managing Complications; and more.

**Salmonella in Domestic Animals** - Paul A. Barrow 2013  
Salmonella remains a major

cause of economic loss in domestic livestock and human food poisoning worldwide. In the last 10 years there have been major advances in understanding the salmonella organism, meaning a compiled source of the new research is urgently needed. With fully updated chapters and new coverage of genome structure, virulence, vaccine development, molecular methods for epidemiology and exotics, this second edition is an invaluable resource for researchers of animal and human health.

Food, Sex and Salmonella - David Waltner-Toews 2009-07-01

What sex is to interpersonal relationships, eating is to the human-environment relationship: a consummation of humans’ connection to the living biosphere. But while sticking one’s tongue into a new and exciting environment may be an act as old as the

planet, it can also lead to some nasty surprises. In this lively look at foodborne illnesses, David Waltner-Toews discusses food-related problems caused by bacteria, viruses, and parasites, including death by puffer fish, rollicking tales of tapeworms, neurological problems brought on by ciguatera poison, and that old standby, botulism. He also examines the chemicals and antibiotics that have entered the food supply and the havoc they can wreak. And to help readers stop problems before they start, he offers common-sense solutions to confronting the complicated issue of foodborne disease. His witty approach makes a deadly serious subject accessible to all readers, while never minimizing the risk.

**Food, Sex, & Salmonella -**

David Waltner-Toews  
1992-12-04

What sex is to inter-personal relationships, eating is to the Human-Environment relationship, a daily consummation of our de facto marriage to the living biosphere. This book is about the true meaning of eating, intimacy, love, vomiting and diarrhea: You and your food partner. It is about the celebration of ecology through eating and about how food poisoning can save the world. This book should be kept next to your toilet, and also next to your refrigerator. The next time you suffer from a bout of food poisoning, doubled over in abdominal pain, feeling like there rages a true revolution within, I want you to understand what is happening to you, why the inner child is having a gaseous tantrum in your guts. I want you to hear Gaia's, the earth organism's, whispered love-message to you.
