The Gender Gap in Psychotherapy E.H. Carmen 2012-12-06 This collection of readings is designed to clarify the relationship between social structures and psychological processes. Our awareness of the need for such a book derives from our extensive experiences in teaching a formal course for mental health professionals on gender and psychotherapy. The material in this anthology emphasizes the clinical implications of the new research and knowledge that has changed our understanding of the psychological development of women and men. Throughout the book, we present ideas that challenge conventional explanations of psychological distress in women and men and suggest alternative conceptualizations of these processes. As will be evident, our work is informed by and contributes to the growing field of knowledge produced by feminist scholars over the last decade. That this book on gender has more to say about women reflects the existence of a substantial body of research that reconceptualizes women's psychology. The corresponding research on men is still in its formative stages, due in part to the later development of a men's movement. Although many of the chapters focus on women, we have attempted in our discussion to consider the implications for men. We believe that the fundamental processes explored in this book are relevant to the understanding of both women and men.

Disease Control Priorities, Third Edition (Volume 2) Robert Black 2016-04-11 The evaluation of reproductive, maternal, newborn, and child health (RMNCH) by the Disease Control Priorities, Third

Edition (DCP3) focuses on maternal conditions, childhood illness, and malnutrition. Specifically, the chapters address acute illness and undernutrition in children, principally under age 5. It also covers maternal mortality, morbidity, stillbirth, and influences to pregnancy and pre-pregnancy. Volume 3 focuses on developments since the publication of DCP2 and will also include the transition to older childhood, in particular, the overlap and commonality with the child development volume. The DCP3 evaluation of these conditions produced three key findings: 1. There is significant difficulty in measuring the burden of key conditions such as unintended pregnancy, unsafe abortion, nonsexually transmitted infections, infertility, and violence against women. 2. Investments in the continuum of care can have significant returns for improved and equitable access, health, poverty, and health systems. 3. There is a large difference in how RMNCH conditions affect different income groups; investments in RMNCH can lessen the disparity in terms of both health and financial risk.

Feminist Perspectives on Social Work and Human Sexuality Mary Valentich 2016-06-10 First published in 1985, this ground-breaking volume contributes to a largely neglected area of social work research, theory and practice. The collection of essays by internationally known social work educators and practitioners applies feminist perspectives to a wide range of issues influencing the social work profession and social work practice. In doing so, it demonstrates that a liberal feminist position is consistent with social work practice. Nearly all the chapters focus on direct practice issues, such as problems faced by women who have been sexually assaulted, the lack of adequate health care provided to lesbians from traditional health care systems, and sexist bias in sex therapy and family therapy models. This book will be of interest to students and practitioners of social work.

Individualizing Gender and Sexuality Nancy J. Chodorow 2012-05-04 Nancy Chodorow, in her groundbreaking book *The Reproduction of Mothering*, quite simply changed the conversation in at

least three areas of study: psychoanalysis, women's studies, and sociology. In her latest book, *Individualizing Gender and Sexuality*, she examines the complexity and uniqueness of each person's personal creation of sexuality and gender and the ways that these interrelate with other aspects of psychic and cultural life. She brings her well-known theoretical agility, wide-ranging interdisciplinarity, and clinical experience to every chapter, advocating for the clinician's openness, curiosity, and theoretical pluralism. The book begins with reflections on Freud's *Three Essays on the Theory of Sexuality*, followed by considerations of Melanie Klein and Stephen Mitchell, as well as on her own work and on the postmodern turn in psychoanalytic gender theory. Subsequent chapters address contemporary clinical-cultural issues such as women and work, women and motherhood, and men and violence. Concluding chapters elaborate on the multiple ingredients and the personal affective, conflictual, and defensive constellations and processes that create sexuality and gender in each individual. Ending with a chapter on homosexualities as compromise formations, Chodorow deepens her account of clinical individuality and sex-gender transference-countertransference while bringing her readers back to Freud and to the many strands that followed, as she consolidates a consistent line of interest in sexuality and gender, theory and practice, sustained over a lifetime.

Mental Health Aspects of Women's Reproductive Health World Health Organization 2009 This book has reviewed the research undertaken on a broad range of reproductive health issues and their mental health determinants/consequences over the last 15 years from both high- and low-income countries. Evidence from peer-reviewed journals has been used wherever possible but has been augmented with results of a specific survey initiated to gather state of the art information on reproductive and mental health issues from a variety of researchers and interested parties. Valuable data from consultant reports, national programme evaluations and postgraduate research work was

also compiled, analyzed and synthesized

Nancy Chodorow and The Reproduction of Mothering Petra Bueskens 2020-11-30 This book analyzes Nancy Chodorow's canonical book *The Reproduction of Mothering*, bringing together an original essay from Nancy Chodorow and a host of outstanding international scholars—including Rosemary Balsam, Adrienne Harris, Elizabeth Abel, Madelon Sprengnether, Ilene Philipson, Meg Jay, Daphne de Marneffe, Alison Stone and Petra Bueskens—in a mix of memoir, festschrift, reflection, critical analysis and new directions in Chodorowian scholarship. In the 40 years since its publication, *The Reproduction of Mothering* has had a profound impact on scholarship across many disciplines including sociology, psychoanalysis, psychology, ethics, literary criticism and women's and gender studies. Organized as a "reproduction of mothering scholarship", this volume adopts a generationally differentiated structure weaving personal, political and scholarly essays. This book

will be of interest to scholars across the social sciences and humanities. It will bring Nancy Chodorow and her canonical work to a new generation showcasing classic and contemporary Chodorowian scholarship.

Medical Psychiatric Practice Alan Stoudemire 1993 This volume is the second in a series of succinct, analytical reviews of advances in the psychiatric care of medically ill patients. Medical-Psychiatric Practice, Volume 2 is designed to help psychiatrists who specialize in the care of medical patients integrate psychotherapeutic, psychopharmacological, and behavioral approaches to therapy, while dealing with complex systems of medical care, mental health care, and health care financing. Under the guidance of an eminent editorial advisory board, the second volume includes critical reviews of the latest advances for medically ill patients in psychotherapy, psychopharmacology, neuropsychiatry, medical-legal issues, and special topics such as psychiatric aspects of anesthesia and cardiac diseases.

Psychiatric Consultation in Childbirth Settings Ronald L. Cohen 2012-12-06 The primary purposes of this volume are: 1. To provide mental health practitioners with a current overview of our knowledge about normal parental development during pregnancy and its relation to fetal development, with particular emphasis on the impact of acute and chronic stress on these developmental processes. 2. To provide an understanding of the general state of the field of pregnancy and childbirth care both in conventional health systems and in alternative options. 3. To provide an understanding of models of consultation and liaison that are adapted to the special conditions of pregnancy and childbirth care, as contrasted to the more traditional modes that characterize these activities in medical and surgical hospitals. If there prove to be secondary gains as a result of pursuing these goals, so much the better. The most desirable of these would be a

heightening of awareness of the mental health needs of "pregnant families" and of the risks they incur in transition from non parenthood to parenthood, and a more effective level of primary and secondary prevention of childhood mental disorders. These latter goals are more global and perhaps even a bit grandiose. Their attainment could only be documented through a series of carefully designed research projects aimed at measuring long-range developmental outcome in children and families who have experienced appropriate and early intervention during the pregnancy period.

Diagnosis: Difference Abby Wilkerson 2019-05-15 How is justice in the delivery of health care influenced by the culture of medicine? In a groundbreaking new work of feminist bioethics, Abby L. Wilkerson examines the cultural status of the medical establishment. Challenging traditional views, she shows that morality in health care has a far-reaching impact on social justice. Situating her analysis in the context of the AIDS and women's health movements, Wilkerson explores continuing patterns of injustice in medicine, the function of health care as social control, and the unequal risk of illness and injury among different social groups. She assesses the role of medicine and bioethics in the sexual oppression of women and of gay and bisexual men, and defines the forces undermining the role of bioethics in monitoring the moral status of health care. What changes would make bioethicists more responsive to the needs of oppressed groups? Wilkerson's book points the way toward a better understanding of medical authority and brings a fresh perspective to health activism, demonstrating that a feminist and sexually inclusive analysis has much to offer in revealing the hidden cultural politics of medicine.

The Women And International Development Annual, Volume 1 Rita S Gallin 2019-06-26 This annual series, published in cooperation with the Women and International Development Program at Michigan State University, uses a multi-disciplinary approach to explore women's experiences across a wide range of geographical areas, economic sectors, and social institutions. The articles presented in each volume synthesize a growing body of literature on key issues, suggest priorities for research, and propose changes in development policy and programming. Each volume is divided into three major sections. In the first, contributors distill and interpret research in review articles; in the second—a trend report—they provide original analyses of existing data sets; and in the final section, they analyze a specific research concern from varying perspectives.

Broken Patterns Anita M. Harris 1995 Based on personal interviews and historical and psychological research, this book examines the complex relationships women share with their mothers and grandmothers and considers how those relationships and society's changing attitudes shape the experience of professional women.

Women's Sexual Experience Martha Kirkpatrick 2012-12-06 This book, like its companion volume, *Women's Sexual Development*, is a potpourri of ideas, not campaign literature to promote a particular point of view. The editor agrees with some of her authors and strongly disagrees with others. The "facts" are few, the questions many. The intent of both books is to evoke questions, delay convictions, invite controversy, and plead for opening minds. The examination and explanation of women's sexual experience has long been the province of men. The "is" and the "oughts" have been

hopelessly confused by the investigators' (or exhorters') biases and limited experience, as well as by the use of the male sexual experience as the model for all human sexual experience. Women, at long last, are talking not only to each other, in personal journals and letters, but also in the more formal worlds of academic and scientific publications. The papers in this book come from many sources. Some are academic; some are experiential, journalistic, or personal. Several emphasize the lack of adequate research and data but address an issue that is just appearing on the surface of contemporary controversy and concern. Many topics and sources of information are missing.

Family Medicine J. L. Buckingham 2013-06-29 This Second Edition of *Family Medicine: Principles and Practice* presents a scientific approach to health and illness in the context of mankind's most enduring societal unit—the family. This is a new book, building on the strengths of the First Edition. The emphasis of this book, like that of the specialty itself, is on the clinical delivery of health care; that is, how the practitioner manages common problems and recognizes uncommon entities encountered in office, hospital, home, and nursing home. In the First Edition, we were faced with the problem of how to organize a family medicine textbook that dealt with clinical topics yet represented more than a series of essays on the specialties for the generalist reader. We began by identifying specific objectives, outlined in the preface to the First Edition. From this evolved an approach which has been called the biopsychosocial perspective—inclusion of behavioral, family, social, and cultural aspects of health care integrated with the traditional "manifestations-and-management" textbook model. The First Edition also introduced a comprehensive classification of clinical problems in family medicine now used in curriculum planning in many family practice residency programs.

Standards and Guidelines for the Psychotherapies Paul M. Cameron 1998-01-01 A comprehensive overview of the art and science of psychotherapy and a set of practice guidelines for

psychiatrist developed from a report by the Joint Task Force on Standards and Guidelines for Medical (Psychiatric) Psychotherapy of the OPA and OMA.

Manual of Gynecologic Surgery Byron J. Masterson 2012-12-06 for a significant portion of the new information in this book. His ability to select the important developments from the literature of the last five years was essential to the completion of this second edition. Further, Dr. Stone's original research on wounds and sutures is included in this volume. Dr. Felix Rutledge and Dr. Laman Gray, Sr., in addition to all the named authors, made valuable comments. Their years of experience were especially helpful in updating the chapters on ovarian surgery and vaginal hysterectomy. My personal Administrative Assistant, Elizabeth Davies, successfully coordinated my various clinical schedules, speaking engagements and department obligations, providing me the time necessary for writing this book. The advice and support of Jerry Stone, Senior Medical Editor, Springer Verlag, also were invaluable in the production of this edition. Lastly, one of our team became ill while we were preparing this book and subsequently died of a rare malignancy. Her outstanding work while with us and her continued interest and encouragement, even though quite of us. Mrs. Sue Koenig was a bright, competent ill, was an inspiration to all and effective co-worker whom is missed by all of us in the Department of Obstetrics and Gynecology at the University of Louisville.

Critical Psychophysical Passages in the Life of a Woman Joan Offerman-Zuckerberg 2012-12-06 After the birth of my second son some 11 years ago, I was painfully torn by the timing of my reentry to work-my wish to return to a prestigious and stimulating position as chief psychologist of a large agency, or my equally powerful wish to enjoy fully my beautiful new son's infancy,

undivided and unturned. At the time I had a dream that my body was cut in half at the waist-my head leaned to the books neatly contained on the library shelves; my belly went to the crib, all sweet-smelling and soft. Not having had the opportunity to be "un divided" with my first son (now 17 years old), I chose to resign my agency position and stay home as long as I wished and then develop my private practice. It was a decision that at the time entailed much loss-cerebral, collegial, social, prestigious-and generated some self-doubt, but in retrospect it is not regretted and was perhaps wise. This son's infancy will always be remembered as a time in which I experienced mothering with ease and grace.

The Transformation of American Sex Education Ellen S. More 2022-01-11 "This book examines Americans' attempts to come to terms with the vexed subject of sex education in the schools from the late 1940s to the early 21st century. Using Mary Calderone's life and career as a touchstone, it traces the origins of modern sex education in the United States from the work of a group of reformers who coalesced around Calderone to create SIECUS in 1964 through the development and use of the competing approaches known as 'abstinence-based' and 'comprehensive' sex education from the 1980s into the 21st century"--

Religion, Women's Health Rights, and Sustainable Development in Zimbabwe: Volume 1 Sophia Chirongoma 2022-08-26 This volume brings to the fore the interface of religion, women's sexual reproductive health and rights (SRHR), and the sustainable development goals (SDGs) in Zimbabwe. It emphasizes that empowering African women is a pivotal pillar for attaining sustainable development. Contributors discuss the need for implementing structural changes as a prerequisite for social progress and development to occur in Southern Africa. They interrogate the extent to which religious beliefs and practices either promote or impede women's SRHR. The contributors

also proffer several ways in which addressing the themes of health for all and equality for all women and girls can make a meaningful contribution towards the fulfillment of the goals set for Agenda 2030.

[The Woman Patient](#) Malkah Notman 2014-01-15

The Woman Patient Malkah Notman 2013-11-11 This volume presents the knowledge, views, and experiences of experts in the fields of health care that are particularly important to women. Not all of the authors agree on all of the issues, but all share the same concerns about women's health and recognize the importance of providing information to enable women to become active participants in the health care partnership. The idea for the book evolved from our own work in the field of women's health care. The positive responses we received to several papers and presentations based on our experiences and addressed to patients, physicians, and other health care professionals indicated that there is a growing need for open discussion of women's health care issues as well as a need for developing and implementing new and better ways of dealing with these issues. We were further motivated by the repeated failure of the health care community to integrate new insights and information (that frequently contradict older, established beliefs and practices) into current health planning, education, and practice.

Exploring/Teaching the Psychology of Women Michele A. Paludi 1990-03-16 The first of its kind, this manual presents educational approaches and processes which reflect feminist principles for teachers and leaders of courses and workshops in the psychology of women. Sample syllabi, outlines, references, lists of audio-visual material, organizations, discussion questions, and experiential exercises reflect the content areas typically covered in these courses: achievement, sexuality, health, adjustment, psychotherapy, communication, victimization, methodology, life-style choices, work, and development.

Emotional Geographies Liz Bondi 2016-05-13 Bringing together well-established interdisciplinary scholars - including geographers Phil Hubbard, Chris Philo and Hester Parr, and sociologists Jenny Hockey, Mike Hepworth and John Urry - and a new generation of researchers, this volume presents a wide range of innovative studies of fundamentally important questions of emotion. Following an overarching introduction, three interlinked sections elaborate key intersections between emotions and spatial concepts, on which each chapter offers a particular take informed by substantive research. At the heart of the collection lies a commitment to convey how emotions always spill over from one domain to another, as well as to illuminate the multiplicity of spaces that produce and are produced by emotional life. The book demonstrates the richness that an interdisciplinary engagement with the emotionality of socio-spatial life generates.

Exploring the Biological Contributions to Human Health Institute of Medicine 2001-07-02 It's obvious why only men develop prostate cancer and why only women get ovarian cancer. But it is not obvious why women are more likely to recover language ability after a stroke than men or why women are more apt to develop autoimmune diseases such as lupus. Sex differences in health throughout the lifespan have been documented. *Exploring the Biological Contributions to Human Health* begins to snap the pieces of the puzzle into place so that this knowledge can be used to improve health for both sexes. From behavior and cognition to metabolism and response to chemicals and infectious organisms, this book explores the health impact of sex (being male or

female, according to reproductive organs and chromosomes) and gender (one's sense of self as male or female in society). Exploring the Biological Contributions to Human Health discusses basic biochemical differences in the cells of males and females and health variability between the sexes from conception throughout life. The book identifies key research needs and opportunities and addresses barriers to research. Exploring the Biological Contributions to Human Health will be important to health policy makers, basic, applied, and clinical researchers, educators, providers, and journalists-while being very accessible to interested lay readers.

The Psychology of Women Margaret W. Matlin 1993 This highly respected, best-selling text offers students an enjoyable, extraordinarily well-written introduction to the Psychology of Women. Appropriate for students from a wide variety of backgrounds, this comprehensive book captures womens' own experiences through direct quotations and an emphasis on empirical research. Known for its balance of scholarship, readability, and inclusion of various kinds of women, Margaret Matlin continues to lead the way for the Psychology of Women course. Meticulously updated to reflect the most current research, PSYCHOLOGY OF WOMEN was written with a genuine interest in and understanding of the students for whom the book is written. Her text includes a chapter on old age as well as discussions of topics such as welfare issues, and pregnancy and women's retirement, which are central in many women's lives, but not consistently covered in other texts.

The Woman Patient Carol Nadelson 2013-11-11 In Volumes 2 and 3, we have chosen a focus that places in context aspects of mental health and the complex psychosocial factors that affect our perceptions of how health and illness are defined and experienced. We are aware that some may take exceptions to the topics chosen or to the way in which some authors have developed their ideas and presented their information. While we cannot expect to agree with each other all of the time, we

can provide a framework and a perspective from which ideas can take form and evolve. The first section of Volume 2 provides an overview of some of the theoretical issues involved in understanding the psychology of women. These issues include changes in psychoanalytic views, particularly in relation to femininity and feminine development. The particular developmental experiences of black women are also clearly delineated. The second section deals with specific points in the life cycle that raise unique issues for women, especially as they pertain to the many roles of women in contemporary society and the impact that these roles have on their careers and on their families. The impact of having a working mother on the early interaction with children, the concerns of midlife, especially marital interactions, and the ambiguities of aging are discussed. We intend to provide information and to raise questions that we hope will be part of an ongoing dialogue, as well as a stimulus to more intensive study and understanding.

American Psychiatry After World War II (1944-1994) Roy W. Menninger 2008-11-01 The history of psychiatry is complex, reflecting diverse origins in mythology, cult beliefs, astrology, early medicine, law religion, philosophy, and politics. This complexity has generated considerable debate and an increasing outflow of historical scholarship, ranging from the enthusiastic meliorism of pre-World War II histories, to the iconoclastic revisionism of the 1960s, to more focused studies, such as the history of asylums and the validity and efficacy of Freudian theory. This volume, intended as a successor to the centennial history of American psychiatry published by the American Psychiatric Association in 1944, summarizes the significant events and processes of the half-century following World War II. Most of this history is written by clinicians who were central figures in it. In broad terms, the history of psychiatry after the war can be viewed as the story of a cycling sequence, shifting from a predominantly biological to a psychodynamic perspective and back again -- all

presumably en route to an ultimate view that is truly integrated -- and interacting all the while with public perceptions, expectations, exasperations, and disappointments. In six sections, Drs. Roy Menninger and John Nemiah and their colleagues cover both the continuities and the dramatic changes of this period. The first four sections of the book are roughly chronological. The first section focuses on the war and its impact on psychiatry; the second reviews postwar growth of the field (psychoanalysis and psychotherapy, psychiatric education, and psychosomatic medicine); the third recounts the rise of scientific empiricism (biological psychiatry and nosology); and the fourth discusses public attitudes and perceptions of public mental health policy, deinstitutionalization, antipsychiatry, the consumer movement, and managed care. The fifth section examines the development of specialization and differentiation, exemplified by child and adolescent psychiatry, geriatric psychiatry, addiction psychiatry, and forensic psychiatry. The concluding section examines ethics, and women and minorities in psychiatry. Anyone interested in psychiatry will find this book a fascinating read.

Technology and Infertility M. Seibel 2012-12-06 Medicine is changing at a speed never witnessed before in history. With each passing year, medical technology achieves the capacity to provide cures and improve treatments that even a short time before were difficult to conceptualize and impossible to provide. Reproductive technology personifies this concept perhaps better than any other field of medicine. The 1990s have seen an explosion in endoscopic and ambulatory procedures, the application of molecular biology to clinical conditions, and the refinement of assisted reproduction to allow third parties (donors and surrogates) into the process of family building. More than ever before, comprehensive medical care requires a team approach. However, the team comprises not only medical and scientific personnel, but also mental health professionals, lawyers, and ethicists. This integrated and multidisciplinary approach to medical care will become even more necessary as medical capabilities continue to develop faster than society can respond. This book reflects such an approach. It is based on a Harvard Postgraduate Course in June 1990 entitled *Infertility in the 1990s: Technological Advances and Their Psychosocial Implications* that was sponsored by the Faulkner Centre for Reproductive Medicine. The first half of the course was directed by Drs. M. Seibel, A. Kiessling, and C. Richards. The second half of the course was directed by Dr. M. Seibel, J. Bernstein, R. N. and S. Levin, LICSW.

Baumgardner, Susan Brownmiller, Phyllis Chesler, Angela Y. Davis, Barbara Ehrenreich, Germaine Greer, Shulamith Firestone, Charlotte Perkins Gilman, Erica Jong, Molly Haskell, Shere Hite, Susie Orbach, Judith Rossner, Alix Kates Shulman, Gloria Steinem, Sojourner Truth, Rebecca Walker, Naomi Wolf, and many others.
