few understand the principles involved in the construction of chimneys and fireplaces, and even experienced builders make mistakes which not only affect the efficiency of the heating unit but frequently create a menace to life and property. This bulletin is designed to give the householder and prospective builder, and especially the farmer or other rural resident who builds or superintends the building of his own home, a working knowledge of the principles to be observed in planning and building chimneys and fireplaces, which if they are observed will go a long way to promote the comfort of the home and insure the safety of the property."--Page ii.

two of the best-loved songbirds, but newer backyard arrivals, like rose-breasted grosbeaks and scarlet tanagers, quickly captivate with their vivid colors and unique songs. Bird lovers will learn to attract new visitors by offering treats that songbirds like best, such as soft, easy-to-peck foods that closely mimic caterpillars, their top food preference. And planting just a few carefree perennials and shrubs can provide opportunities for cover and nesting. Sally Roth's *Attracting Songbirds to Your Backyard* draws on the latest science and 50 years of observation to reveal these fascinating details:

- In the wee hours, it's the robins that sing first, followed by the babble of house wrens and the whistle of cardinals
- Some birds learn birdsongs throughout their lives, while others stop learning once they can mimic their parents' song
- It's Dad, not Mom, who teaches the young birds to sing

Simple tips, ideas, and recipes, as well as an understanding of why songbirds are coming from the treetops into the backyard, will help any bird enthusiast create a songbird sanctuary.

**Birdwatching in New York City and on Long Island** Deborah Rivel 2016-05-03 This easy-to-use guide gives seasonal information for both popular birding sites and those off the beaten path. Precise directions to the best viewing locations within the region's diverse habitats enable birdwatchers to efficiently explore urban and wild birding hotspots. Over 500 species of birds can be seen in New York City's five boroughs and on Long Island, one of the most densely populated and urbanized regions in North America, which also happens to be situated directly on the Atlantic Flyway. In this fragmented environment of scarce resources, birds concentrate on what's available. This means that high numbers of birds are found in small spaces. In fact, Central Park alone attracts over 225 species of birds, which birders from around the world flock to see during spring and fall migration. Beyond Central Park, the five boroughs and Long Island have numerous wildlife refuges of extraordinary scenic beauty where resident and migratory birds inhabit forests, wetlands, grasslands, and beaches. These special places present an opportunity to see a wide array of songbirds, endangered nesting shorebirds, raptors, and an unprecedented number and variety of waterfowl. Including the latest information on the seasonal status and distribution of more than 400 species, with 39 maps and over 50 photographs, this full-color guide features information essential to planning a birding visit. It will become the go-to book for both the region's longtime birders and those exploring the area for the first time.
