**Mokole** - James Ray Comer  
1999-11

Werewolf: The Apocalypse is about anger over the loss of what the shapeshifting Garou hold dearest: Gaia, the Earth itself. Corruption from without and within has caused the destruction not only of the Garou's environment, but also of their families, friends and culture, which extends in an unbroken line to the very dawn of life. No matter how righteously the Garou hold

themselves, no matter how they prey on their destroyers, the corruption spreads. Now the time for reconciliation is past. This grave insult against Gaia can end in only one way: blood, betrayal... and rage.

Reasonable Children - Michael S. Pritchard 1996

The public outcry for a return to moral education in our schools has raised more dust than it's dispelled. Building upon his provocative ideas in *On Becoming Responsible*, Michael Pritchard clears the air with a sensible plan for promoting our children's moral education through the teaching of reasonableness. Pritchard contends that children have a definite but frequently untapped capacity for reasonableness and that schools in a democratic society must make the nurturing of that capacity one of their primary aims, as fundamental to learning as the development of reading, writing, and math skills. Reasonableness itself, he shows, can be best cultivated

through the practice of philosophical inquiry within a classroom community. In such an environment, children learn to work together, to listen to one another, to build on one another's ideas, to probe assumptions and different perspectives, and ultimately to think for themselves.

Advocating approaches to moral education that avoid mindless indoctrination and timid relativism, Pritchard neither preaches nor hides behind abstractions. He makes liberal use of actual classroom dialogues to illustrate children's remarkable capacity to engage in reasonable conversation about moral concepts involving fairness, cheating, loyalty, truth-telling, lying, making and keeping promises, obedience, character, and responsibility. He also links such discussions to fundamental concerns over law and moral authority, the roles of teachers and parents, and the relationship between church and state. Pritchard draws broadly and deeply from the fields of philosophy and

psychology, as well as from his own extensive personal experience working with children and teachers. The result is a rich and insightful work that provides real hope for the future of our children and their moral education.

*America's Lab Report -*

National Research Council  
2006-01-20

Laboratory experiences as a part of most U.S. high school science curricula have been taken for granted for decades, but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nation's high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools: What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all student have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education

system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers, and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculum-and how that can be accomplished.
