*Treating Endocrine and Metabolic Disorders With Herbal Medicines* - Hussain, Arif 2020-12-11

The utilization of herbal medicine to treat endocrine and metabolic disorders has garnered much attention within the past few decades. Specifically, the popularity of using dietary supplements for the management of chronic disorders has drastically increased, with a wide variety of these products available over the counter. They represent an attractive adjuvant to traditional therapy for their lower toxicity and their easy accessibility. The identification of such dietary compounds has prompted researchers to explore the vast array of their beneficial effects. However, despite their widespread use, there is still limited data on the safety and efficacy of the products currently on the market. Current research on the side effects and safe usage of herbal

medicines is necessary for providing optimal care and counseling for patients.

*Treating Endocrine and Metabolic Disorders With Herbal Medicines* is a comprehensive reference book focused on spreading awareness on the safety, potential harmful effects, and rational use of herbal medicines. The chapters within explore and provide insight on the effectiveness, versatility, and side effects of various herbal medicines across a range of different diseases and conditions. While highlighting herbal medicine in areas such as diabetes, cancer, infertility, and endocrine disorders, this publication is ideally intended for clinical practitioners, pharmaceutical scientists, doctors, practitioners, stakeholders, researchers, academicians, and students interested in enhancing their knowledge and awareness in the field of complementary medicine.

*The Genetics of Sex Hormones and Their Effects on Mammographic Density in Women* - Cameron B. Haas 2021

In this work we leveraged genomic information from large-scale population-based studies to explore the relationships between three epidemiologic factors associated with breast cancer in women: 1) mammographic density, 2) sex hormone concentrations, and 3) body mass index (BMI).

Mammographic density, which describes the proportion of dense (i.e., epithelial and stromal) tissue in the breast, is one of the strongest predictors of breast cancer in women.

Women with extremely dense breasts have a 3 to 6-fold increased risk of breast cancer compared to those with primarily fatty breasts. Breast cancer is generally considered to be a primarily hormone-

driven cancer, an attribute that has led to the development of effective treatment and prophylactic strategies for hormone receptor positive subtypes and cause for investigating the role of endogenous hormones in breast cancer etiology. Finally, BMI has been consistently observed to have paradoxical associations with breast cancer across menopause, with evidence of preventative effects associated with higher BMI in premenopausal women but increased risk in postmenopausal women. We first built on recent analyses that investigated the genetic architecture of testosterone and sex hormone binding globulin (SHBG) in men and women of European ancestry by conducting genome-wide association studies (GWAS) of estradiol concentrations in women. Additionally, we investigated the generalizability of previous findings in women of African ancestry. We further conducted menopausal status specific GWAS of these sex hormones

to identify loci with heterogeneous effects across menopause. We found that the strongest overall genetic predictor of testosterone concentrations, located in the CYP3A7 gene, had an effect nearly twice as large in premenopausal women compared to postmenopausal women. Similarly, genetic variants in the AKR1C4 gene were strongly associated with concentrations of SHBG in premenopausal women, but not in postmenopausal women, with a 5-fold difference in effect estimates between the two. We also estimated the shared heritability across menopausal status specific hormone concentrations, and observed a relatively low genetic correlation between pre- and postmenopausal detectable levels of estradiol, whereas comparisons of pre- and postmenopausal shared heritability for SHBG and testosterone were both close to one, indicating near identical genetic architectures. We performed gene-level tests for enrichment of genetic

associations within tissue-specific gene expressions by collapsing multiple SNP-level associations in a gene while accounting for linkage disequilibrium. Using this gene-set analysis for tissue specificity we observed a change from strong adrenal gland tissue specificity of testosterone in premenopausal to adipose tissue specificity in postmenopausal women, suggesting that adiposity may play a more important role in determining circulating concentrations of testosterone after menopause. To understand the directional relationships between overall and menopausal status specific concentrations of sex hormones and BMI on mammographic dense and non-dense area we performed Mendelian Randomization analyses. We created menopausal status specific genetic instruments for SHBG, testosterone, and estradiol based on our previous work. We obtained single nucleotide polymorphisms (SNP)-specific association statistics from a recent GWAS

of mammographic density of up to 27,900 women of European ancestry. Effect estimates for BMI were obtained from the largest meta-GWAS of BMI to date, comprising more than 700,000 individuals. We observed an inverse relationship between overall genetically predicted testosterone and dense area. Increasing genetically predicted BMI was strongly associated with an increase in genetically predicted non-dense area, as previously observed. However, we also observed an inverse association between genetically predicted BMI and absolute dense area, which might explain some of the reduced risk of breast cancer associated with an increase in genetically predicted BMI. Higher genetically predicted BMI was also strongly associated with decreasing SHBG concentrations, as well as increasing concentrations of testosterone. Based on the inverse-variance weighted results, we observed increasing genetically predicted BMI to be

associated with a decrease in genetically predicted detectable levels of overall and premenopausal specific estradiol concentrations, but not for postmenopausal only. Multivariable MR approaches for the association of BMI and mammographic density adjusting for sex hormones did not substantively change the effect estimates of BMI. Building on the strong association between BMI and mammographic density, we sought to identify genetic loci that interact with BMI to alter mammographic density phenotypes. We conducted genome-wide tests for the interaction between SNPs and BMI on percent mammographic density, absolute dense area, and absolute non-dense area in 14,837 women. Despite having the largest sample size to date with genetic and phenotypic data for mammographic density, we did not find any loci that reached standard Bonferroni correction for statistical significance. This work presents novel findings of the unique genetic

architectures of menopausal specific concentrations of sex hormones in women and extends these findings to investigate their associations with mammographic density. We show that BMI plays an important role in determining not only non-dense area, but also dense area and a possibly separate mechanism for breast cancer etiology. Additionally, there is evidence based on our MR approaches of a regulatory role of BMI on endogenous estradiol as yet another possible pathway to tumorigenesis. We did not identify any genetic variant that has a strong modifying effect of BMI on mammographic density phenotypes. It is possible that larger studies are merited to investigate the interactions between germline genetic variants and BMI on mammographic density variation.

### **Androgen Deficiency in The**

**Adult Male** - Malcolm

Carruthers 2004-08-30

Just what is the andropause?

Although acceptance of the

andropause concept by the medical community is growing, it is still a hotly debated issue. But as a busy clinician you have patients to treat and you need information. So where can you find the information you need to understand, diagnose, and treat this condition? Androgen Deficiency in the Adult Male: Causes, Diagnosis and Treatment distills the knowledge acquired by author Dr. Malcolm Carruthers in his 25 years of research and clinical experience in diagnosing and treating the andropause into a comprehensive, detailed clinical resource. Dr. Carruthers documents the history of the search for testosterone treatment from antiquity to the awarding of the Nobel Prize to Adolf Butenandt and Leopold Ruzicka for synthesizing testosterone and patenting its production some 4,000 years later. He discusses the causes of androgen deficiency, the male menopause or andropause, and recent advances in its

diagnosis. The text includes reviews of the literature in each section and a fund of bibliographic references gleaned from the author's years of research in this field. This combination of features makes Androgen Deficiency in the Adult Male: Causes, Diagnosis and Treatment an invaluable and practical clinical guide, a complete and detailed reference volume, and a cohesive and readable textbook.

**Hormones, Cognition and Dementia** - Eef Hogervorst 2009-09-24

A decade ago, oestrogen-containing hormone therapy was viewed as a promising strategy for the prevention and treatment of dementia and age-related cognitive decline.

However, treatment trials in women with Alzheimer's disease showed that oestrogens did not reverse cognitive impairment, and clinical trials in healthy older women indicated that oestrogens did not prevent cognitive decline. The Women's Health Initiative Memory Study trial even suggested an increased risk of dementia with treatment late in life. What happened? How are we to understand these findings? What are the implications for middle-aged and older women? What about testosterone, and what about men? And where do we go from here? This book brings together world-renowned experts in basic and clinical research on sex steroids, aging, and cognition to integrate existing findings with emerging new data, and offer challenging hypotheses on these key issues.

### **Modern Menopausal**

**Hormone Treatment** - Hilde Löfqvist 2022-02-10

This unique book is structured to give the reader a comprehensive view to understand the decline of hormones at midlife and the risks and benefits of evidence based hormonal treatments. The difference between bio-identical and synthetic hormones is shown. With this book the author intends to restore the trust of the mostly positive effects of hormone treatment during menopause. In this book effective hormone treatments that may be carried on for years are discussed. Those hormones may even prevent age related diseases (arthralgia, osteoporosis, cardiovascular diseases) if

started at the right time frame directly after menopause, known as "window of opportunity". This book fills a gap for medical health providers and can be of benefit for all women searching evidence-based information and answers on hormone menopausal changes and treatments. The book provides the reader with case histories to show how different women are at the menopausal transition, and what the doctor has to consider in the choice of investigation and treatment. [Polycystic Ovary Syndrome](#) - Andrea Dunaif 2008-01-12 This volume includes the latest diagnostic criteria for PCOS and comprises the most up-to-date information about the genetic features and pathogenesis of PCOS. It critically reviews the methodological approaches and the evidence for various PCOS susceptibility genes. The book also discusses additional familial phenotypes of PCOS and their potential genetic basis. All four editors of this title are extremely prominent

in the field of PCOS.

### **Trends in Oral**

**Contraception** - R.F. Harrison  
2013-11-08

After 20 years of oral contraceptive (OC) use, epidemiological data and scientific research have led to the now accepted evidence that the most important effect produced by these drugs on humans, other than the prevention of unwanted pregnancy, is an increase in

the risk of cardiovascular disease. Because the incidence of cardiovascular disease is also related to disturbances of the lipoprotein metabolism, it appears to be opportune to analyse the different aspects of the interaction between female hormones and lipoprotein (LP) metabolism. **SERUM LIPOPROTEINS:**

**METABOLISM** In the serum, lipids (cholesterol (C), triglycerides (TG), and phospholipids) are associated with peptides called apoproteins: apoproteins A-I, A-11, B, C, etc. The chylomicrons and the very low density lipoproteins (VLDL) are rich in TG and contain the Apo B-48; the low density lipoproteins (LDL) are rich in C and contain the Apo B- 100; and the high density lipoproteins (HDL) are rich in proteins (Apo A-I, Apo A-II) and phospholipids.

The roll that bioidentical hormone replacement therapy has in overall wellbeing for millions of people is simply remarkable. *Androgens and the Aging Male* - B.J. Oddens 1996-11-15 While menopause in women is a well-established and well documented phenomenon, the andropause in men is a relatively new concept. The terms male menopause and andropause suggest that this is an abrupt phenomenon related to a sudden deprivation of sex hormones. Unlike the menopause, which has a relatively sudden onset, the andropause appears to be a gradual process. It has been hypothesized that an androgen deficiency might develop with aging. Androgens and the

Aging Male explores this hypothesis. The book focuses on the gradually progressive problems related to the decline in androgens that can occur with advancement of age. It examines the debate about the extent to which an age-dependent decline in androgens leads to health

problems that affect or impair the quality of life, and the theory behind it. In addition, it reviews studies evaluating the effects of androgen supplementation. Androgens and the Aging Male comprehensively covers androgen function and how it changes over time.
