**Anarchist Seeds Beneath the Snow** David Goodway 2006-01-01 From William Morris to Oscar Wilde to George Orwell left-libertarian thought has long been an important but neglected part of British cultural and political history. This work seeks to recover that indigenous anarchist tradition. It argues that a recovered anarchist tradition could be a touchstone for contemporary political radicals.

**Wolf of Wessex** Matthew Harffy 2020 AD 838: deep in the forests of Wessex, Dunston's solitary existence is shattered when he stumbles on a mutilated corpse. Accused of the murder, Dunston must clear his name and keep the dead man's daughter alive in the face of savage pursuers desperate to prevent a terrible secret from being revealed. Rushing headlong through Wessex, Dunston will need to use all the skills of survival garnered from a lifetime in the wilderness. And if he has any hope of victory against the implacable enemies on their trail, he must confront his long-buried past--becoming the man he once was and embracing traits he had promised he would never return to. The Wolf of Wessex must hunt again; honor and duty demand it.

The History of Beginning Reading Geraldine E. Rodgers 2001 The puzzling adoption in 1930 of a deaf-mute method for teaching beginning reading to hearing children in America can only be understood when the long history of teaching beginning reading is known. The deaf-mute method adopted almost immediately after 1930 from the Atlantic to the Pacific Oceans and from Canada to Mexico was the "meaning" approach to teach the reading of alphabetic print instead of the "sound" approach. "Dick and Jane" primers and their clones, which teach beginning reading by meaning instead of by sound are, indeed, the disgraceful source for America's functional illiteracy problem. The history is an attempt to bring together most historical sources on those primers and on the long teaching of beginning reading itself so that functional illiteracy can be properly understood and successfully corrected.

Latin Palaeography Bernhard Bischoff 1990-04-12 This work, by the greatest living authority on medieval palaeography, offers the most comprehensive and up-to-date account in any language of the history of Latin script. It also contains a detailed account of the role of the book in cultural history from antiquity to the

Renaissance, which outlines the history of book illumination. Designed as a textbook, it contains a full and updated bibliography. Because the volume sets the development of Latin script in its cultural context, it also provides an unrivalled introduction to the nature of medieval Latin culture. It will be used extensively in the teaching of latin palaeography, and is unlikely to be superseded.

**Theory of Literature** Rene Wellek 2024-04-02 Theory of Literature was born from the collaboration of Ren Wellek, a Vienna-born student of Prague School linguistics, and Austin Warren, an independently minded "old New Critic." Unlike many other textbooks of its era, however, this classic kowtows to no dogma and toes no party line. Wellek and Warren looked at literature as both a social product--influenced by politics, economics, etc.--as well as a self-contained system of formal structures. Incorporating examples from Aristotle to Coleridge, written in clear, uncondescending prose, Theory of Literature is a work which, especially in its suspicion of simplistic explanations and its distrust of received wisdom, remains extremely relevant to the study of literature today.

The Newspapers Handbook Richard Keeble 2014-08-21 This new edition of The Newspapers Handbook presents an enlightening examination of an ever-evolving industry, engaging with key contemporary issues, including reporting in the digital age and ethical and legislative issues following the hacking scandal to display a comprehensive anatomy of the modern newsroom. Richard Lance Keeble and Ian Reeves offer readers expert practical advice, drawing on a wide range of examples from print and digital news sources to illustrate best practice and the political, technological and financial realities of newspaper journalism today. Other key areas explored include: the language

of news basic reporting the art of interviewing feature writing the role of social media in reporting investigative reporting court reporting reporting on national and local government guidance on training and careers for those entering the industry.

*Biomedical Visualisation* Paul M. Rea 2020-11-19 This edited book explores the use of technology to enable us to visualise the life sciences in a more meaningful and engaging way. It will enable

those interested in visualisation techniques to gain a better understanding of the applications that can be used in visualisation, imaging and analysis, education, engagement and training. The reader will be able to explore the utilisation of technologies from a number of fields to enable an engaging and meaningful visual representation of the biomedical sciences, with a focus in this volume related to anatomy, and clinically applied scenarios. The first six chapters in this volume show the wide variety of tools and methodologies that digital technologies and visualisation techniques can be utilised and adopted in the educational setting. This ranges from body painting, clinical neuroanatomy, histology and veterinary anatomy through to real time visualisations and the uses of digital and social media for anatomical education. The last four chapters represent the diversity that technology has to be able to use differing realities and 3D capture in medical visualisation, and how remote visualisation techniques have developed. Finally, it concludes with an analysis of image overlays and augmented reality and what the wider literature says about this rapidly evolving field.

*The Wider Domain of Evolutionary Thought* D.R. Oldroyd

2012-12-06 Only in fairly recent years has History and Philosophy of Science been recognized - though not always under that name - as a distinct field of scholarly endeavour. Previously, in the Australasian region as elsewhere, those few individuals working within this broad area of inquiry found their base, both intellectually and socially, where they could. In fact, the institutionalization of History and Philosophy of Science began comparatively early in Australia. An initial lecturing appointment was made at the University of Melbourne immediately after the Second World War, in 1946, and other appointments followed as the subject underwent an expansion during the 1950s and '60s similar to that which took place in other parts of the world. Today there are major Departments at the University of Melbourne, the University of New South Wales and the University of Wollongong, and smaller groups active in many other parts of Australia, and in New Zealand. "Australasian Studies in History and Philosophy of Science" aims to provide a distinctive publication outlet for Australian and New Zealand scholars working in the general area of history, philosophy and social studies of science. Each volume will comprise a group of essays on a connected theme, edited by an Australian or a New Zealander with special expertise in that particular area. The series should, however, prove of more than merely local interest. Papers will address general issues; parochial topics will be avoided.

**Educating Children with Autism** National Research Council 2001-11-11 Autism is a word most of us are familiar with. But do we really know what it means? Children with autism are challenged by the most essential human behaviors. They have difficulty interacting with other people-often failing to see people as people rather than simply objects in their environment. They cannot easily communicate ideas and feelings, have great trouble imagining what others think or feel, and in some cases spend their lives speechless. They frequently find it hard to make friends

or even bond with family members. Their behavior can seem bizarre. Education is the primary form of treatment for this mysterious condition. This means that we place important responsibilities on schools, teachers and children's parents, as well as the other professionals who work with children with autism. With the passage of the Individuals with Disabilities Education Act of 1975, we accepted responsibility for educating children who face special challenges like autism. While we have since amassed a substantial body of research, researchers have not adequately communicated with one another, and their findings have not been integrated into a proven curriculum. *Educating Children with Autism* outlines an interdisciplinary approach to education for children with autism. The committee explores what makes education effective for the child with autism and identifies specific characteristics of programs that work. Recommendations are offered for choosing educational content and strategies, introducing interaction with other children, and other key areas. This book examines some fundamental issues, including: How children's specific diagnoses should affect educational assessment and planning How we can support the families of children with autism Features of effective instructional and comprehensive programs and strategies How we can better prepare teachers, school staffs, professionals, and parents to educate children with autism What policies at the federal, state, and local levels will best ensure appropriate education, examining strategies and resources needed to address the rights of children with autism to appropriate education. Children with autism present educators with one of their most difficult challenges. Through a comprehensive examination of the scientific knowledge underlying educational practices, programs, and strategies, *Educating Children with Autism* presents valuable information for parents, administrators, advocates, researchers, and policy makers.

The Last 100 Yards Paul Berg 2019-05 The Last 100 Yards: The

Crucible of Close Combat in Large-Scale Combat Operations presents thirteen historical case studies of close combat operations from World War I through Operation Iraqi Freedom. This volume is a collection from the unique and deliberate perspective of the last 100 yards of ground combat. In today's Army, there are few leaders who have experienced multi-domain large-scale ground combat against a near-peer or peer enemy first hand. This volume serves to augment military professionals' understanding of the realities of large-scale ground combat operations through the experiences of those who lived it.
