Health Care in America: Separate and Unequal Kant Patel 2015-01-28 The American health care system is a unique mix of public and private programs that critics argue has produced a two-tier system - one for the rich and the other for the poor - that delivers dramatically unequal care and leaves millions of Americans seriously underinsured or with no coverage at all. This book examines the root causes of the inequalities of the American health care system and discusses various policy alternatives. It systematically documents the demands on and the performance of our health care system for different population groups as defined on the basis of gender (women), age (children), race and ethnicity (African Americans, Hispanics, Native Americans), and residence in high poverty areas (rural and inner city locales). For each population, the book documents: historical and demographic profile, data on health status, aspects of inequality including access; quality of care; and endemic, cultural, and lifestyle issues affecting health; policies, laws, and programs relevant to health care; and, indicators of improvement or negative trends.

New Horizons in Medical Anthropology Margaret Lock 2003-09-02 *New Horizons in Medical Anthropology* is a festschrift in honor of Charles Leslie whose influential career helped shape this subfield of anthropology. This collection of cutting-edge essays explores medical innovation and medical pluralism at the turn of the 21st century. The book accomplishes two things: it reflects recent research by medical anthropologists working in Asia who have been inspired by Charles Leslie's writing on such topics as medical pluralism and the early emergence of what has become a globalized biomedicine, the social relations of therapy management, and the relationship between the politics of the state and discourse about the health of populations, illness, and medicine. The book also takes up lesser known aspects of Leslie's work: his contribution as an editor and the role he played in carrying the field forward; his ethics as a medical anthropologist committed to humanism and sensitive to racism and eugenics; and the passion he inspired in his co-workers and students. Charles Leslie is a remarkable and influential social scientist. *New Horizons in Medical Anthropology* is a fitting tribute to a sensitive scholar whose theories and codes of practice provide an essential guide to future generations of medical anthropologists.

Gender, Health, and History in Modern East Asia Angela Ki Che Leung 2017-11-22 This groundbreaking volume captures and analyzes the exhilarating and at times disorienting experience when scientists, government officials, educators, and the general public in East Asia tried to come to terms with the introduction of Western biological and medical sciences to the region. The nexus of gender and health is a compelling theme, for this is an area in which private lives and personal characteristics encounter the interventions of public policies. The nine empirically based studies by scholars of history of medicine, sociology, anthropology, and STS (science, technology, and society), spanning Japan, Korea, China, Taiwan, and Hong Kong from the 1870s to the present, demonstrate just how tightly concerns with gender and health have been woven into the enterprise of modernization and nation-building throughout the long twentieth century. The concepts of "gender" and "health" have become so commonly used that one might overlook that they are actually complicated notions with vexed histories even in their native contexts. Transposing such terminologies into another historical or geographical dimension is fraught with problems, and what makes the East Asian cases in this volume particularly illuminating is that they present concepts of gender and health in motion. The studies show how individuals and societies made sense of modern scientific discourses on diseases, body, sex, and reproduction, redefining existing terms in the process and adopting novel ideas to face new challenges and demands. "Whether reviewing the comparative national histories of birth control, debating early cases of transsexual surgery, or highlighting the resurgence of 'traditional' Asian medical commodities, this volume provides accessible and productive studies on these intriguing topics in Asia. Scholars of modern East Asia and indeed anyone concerned with the analysis of gender and health in light of intersecting postcolonial studies will find the book rewarding." —Rayna Rapp, New York University "A bold and important volume that explores the interweaving of gender, body, and modernity throughout East Asia. With vivid articles on sexuality, reproductive technologies, and sexual identities, the book opens multiple possibilities for how 'Asia as method' can shine new light on persistent theoretical questions from biopower to biocitizenship." —Ruth Rogaski, Vanderbilt University

Sex and Medicine Rosemary Pringle 1998-06-13 This insightful 1998 book uses the experiences of women doctors to explore whether they make a difference.

Tackling Health Inequities Through Public Health Practice Richard Hofrichter 2010 Social justice has always been a core value driving public health. Today, much of the etiology of avoidable disease is rooted in inequitable social conditions brought on by disparities in wealth and power and reproduced through ongoing forms of oppression, exploitation, and marginalization. *Tackling Health Inequities* raises questions and provides a starting point for health practitioners ready to reorient public health practice to address the fundamental causes of health inequities. This reorientation involves restructuring the organization, culture and daily work of public health. *Tackling Health Inequities* is meant to inspire readers to imagine or envision public health practice and their role in ways that question contemporary thinking and assumptions, as emerging trends, social conditions, and policies generate increasing inequities in health.

Giving Birth in Canada, 1900-1950 Wendy Mitchinson 2002-01-01 A fascinating account of childbirth rituals in the first half of the twentieth century from the initial diagnosis of pregnancy, through childbirth - who was present, and where it took place - to the definition of what constituted a normal birth.

Women's Health, Politics, and Power Elizabeth Fee 2020-11-25 This collection of essays addresses the broadening array of issues on the agenda of the women's health movements of the 1980s and 1990s, just as a previous collection, "Women and Health: The Politics of Sex in Medicine", gathered contributions from the earlier wave of the women's health movement in the 1970s. The papers in both volumes are selected from the "International Journal of Health Services", edited by Vicente Navarro. The essays in this volume were originally published in the 1980s and early 1990s. Together, they present a framework for understanding the struggles over women's health that have occurred in this time period, and provide specific analyses of women's health in relation to race/ethnicity and class, the work of health care, the health of women workers, international reproductive health, sexuality, AIDS, and public health policy.

Everyday Women's and Gender Studies Ann Braithwaite 2016-08-11 *Everyday Women's and Gender Studies* is a text-reader that offers instructors a new way to approach an introductory course on women's and gender studies. This book highlights major concepts that organize the diverse work in this field: Knowledges, Identities, Equalities, Bodies, Places, and Representations. Its focus on "the everyday" speaks to the importance this book places on students understanding the taken-for granted circumstances of their daily lives. Precisely because it is not the same for everyone, the everyday becomes the ideal location for cultivating students' intellectual capacities as well as their political investigations and interventions. In addition to exploring each concept in detail, each chapter includes up to five short recently published readings that illuminate an aspect of that concept. *Everyday Women's and Gender Studies* explores the idea that "People are different, and the world isn't fair," and engages students in the inevitably complicated follow-up question, "Now that we know, how shall we live?"

The Biopolitics of Breast Cancer Maren Klawiter 2008 For nearly forty years, feminists and patient activists have argued that medicine is a deeply individualizing and depoliticizing institution. According to this view, medical practices are incidental to people's transformation from patients to patient activists. *The Biopolitics of Breast Cancer* turns this understanding upside down. Maren Klawiter analyzes the evolution of the breast cancer

movement to show the broad social impact of how diseases come to be medically managed and publicly administered. Examining surgical procedures, adjuvant therapies, early detection campaigns, and the rise in discourses of risk, Klawiter demonstrates that these practices created a change in the social relations-if not the mortality rate-of breast cancer that initially inhibited, but later enabled, collective action. Her research focuses on the emergence and development of new forms of activism that range from grassroots patient empowerment to environmental activism and corporate-funded breast cancer awareness. The *Biopolitics of Breast Cancer* opens a window onto a larger set of changes currently transforming medically advanced societies and ultimately challenges our understanding of the origins, politics, and future of the breast cancer movement. Maren Klawiter holds a PhD in sociology from the University of California, Berkeley. She is currently pursuing a law degree at Yale University.

Women's Health, Politics, and Power Elizabeth Fee 2020-11-26 This collection of essays addresses the broadening array of issues on the agenda of the women's health movements of the 1980s and 1990s, just as a previous collection, "Women and Health: The Politics of Sex in Medicine", gathered contributions from the earlier wave of the women's health movement in the 1970s. Communities in Action National Academies of Sciences, Engineering, and Medicine 2017-04-27 In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

Encyclopedia of Women and Gender, Two-Volume Set Judith Worell 2001-10-16 The study of gender differences began in earnest in the 1970s and has since increased dramatically to infiltrate virtually all fields of study in the social and behavioral sciences. Along the way, it was discovered that while women very often think and behave differently than do men, industrialized societies cater to masculine perspectives. The "Psychology of Women" emerged as a field of study focusing on just those areas in which women most often butted against assumed roles. And similarly, in the 1990s, the "Psychology of Men" emerged to focus on the same issues for men. The *Encyclopedia of Gender* covers all three areas under one cover, discussing psychological differences in personality, cognition, and behavior, as well as biologically based differences and how those differences impact behavior. Coverage includes studies of these differences in applied settings such as education, business, the home, in politics, sports competition, etc. Key Features * Over 100 In-depth chapters by leading scholars in the psychology of women and gender * Addresses critical questions of similarities and differences in gendering across diverse groups, challenging myths about gender polarization and the "Venus/Mars" distinction * Broad coverage of topics from theory and method to development, personality, violence, sexuality, close relationships, work, health, and social policy * Sensitive attention to multicultural and cross-cultural research * Clearly written, readable, comprehensive, with helpful guides (outline, glossary, reference list) * Raises difficult questions related to power, inequality, ethics, and social justice * Challenges the reader to revise established "truths" and to seek further information * Maintains a feminist and woman-centered focus

Feminism in Twentieth-Century Science, Technology, and Medicine Angela N. H. Creager 2001-11 What useful changes has feminism brought to science? Feminists have enjoyed success in their efforts to open many fields to women as participants. But the effects of feminism have not been restricted to altering employment and professional opportunities for women. The essays in this volume explore how feminist theory has had a direct impact on research in the biological and social sciences, in medicine, and in technology, often providing the impetus for fundamentally changing the theoretical underpinnings and practices of such research. In archaeology, evidence of women's hunting activities suggested by spears found in women's graves is no longer dismissed; computer scientists have used feminist epistemologies for rethinking the human-interface problems of our growing reliance on computers. Attention to women's movements often tends to reinforce a presumption that feminism changes institutions through critique-from-without. This volume reveals the potent but not always visible transformations feminism has brought to science, technology, and medicine from within. Social Epidemiology Lisa F. Berkman 2000-03-09 The authors of this groundbreaking text define social epidemiology as the study of the social determinants of health, implying that an important goal of public health is to identify and address factors in the social environment that may be related to health outcomes. In the first systematic account of this field, they focus on the major social variables that influence health, including socioeconomic position, income distribution, race/ethnicity, gender, social networks/social support, social capital and community cohesion, work environment, life transitions, and affective psychological states. Individual chapters describe the conceptualization and measurement of each social variable, as well as the empirical evidence linking them to a broad range of mental, physical, and behavioral health outcomes. The volume draws on the expertise of an internationally renowned group of scholars, representing the diversity of disciplines relevant to this emerging field, from sociology and psychology to physiology and medicine. The approaches covered by the chapters span the range from formulating and testing hypotheses about the links between social conditions and health to designing and implementing interventions and social policies to improve population health. The challenge of persistent social inequalities in health across the globe makes this a timely publication. The book will be an indispensable introduction to the field for students, researchers, practitioners, and policy analysts.

The Politics of Women's Health Susan Sherwin 1998 Examines the real world of women's health status and health-care delivery in different countries, and the assumptions behind the dominant medical model of solving problems without regard to social conditions. This book asks what feminist health-care ethics looks like if we start with women's experiences and concerns.

Embodying Inequality Nancy Krieger 2016-12-05 To advance the epidemiological analysis of social inequalities in health, and of the ways in which population distributions of disease, disability, and death reflect embodied expressions of social inequality, this volume draws on articles published in the "International Journal of Health Services" between 1990 and 2000. Framed by ecosocial theory, it employs ecosocial constructs of "embodiment"; "pathways of embodiment"; "cumulative interplay of exposure, susceptibility, and resistance across the lifecourse"; and "accountability and agency" to address the question; and who and what drives current and changing patterns of social inequalities in health.

What Makes Women Sick Lesley Doyal 1995-06-19 Lesley Doyal draws on a wide range of disciplines to highlight the limitations of medical models in understanding global patterns of health and disease in women. Examining in detail the impact of sexuality, fertility control, reproduction, domestic labour and waged work on women's well-being, she shows how gender divisions in economic and social life affect their experiences of illness, disability and mortality. A concluding chapter illustrates the multiplicity of ways in which women around the world are challenging the threats to their health.

Women, Medicine, Ethics and the Law Susan Sherwin 2020-09-10 This title was first published in 2002: A collection of articles focused on women within a general study of medicine, ethics and the law. Topics covered include: areas where the institutions of medicine, ethics and the law intersect in women's reproductive and sexual lives; the impact of legal policies and dominant ethical beliefs on many aspects of women's health; and the health practices and policies of bioethics and health law. The editors recognise that it is important not to lose sight of social differences other than gender, such as race, ethnicity, class, age, sexuality, religion, level of physical and mental ability, and family relationships. In their approach they seek to consider the lives and experiences of women as primary. Hence, they focus on the question of how women's encounters with the health-care system are structured by gender and other socially significant dimensions of their lives (rather than the question of how women differ from the male "norm").

Epidemiology and the People's Health Nancy Krieger 2011-03-23 This concise, conceptually rich, and accessible book is a rallying cry for a return to the study and discussion of epidemiologic theory: what it is, why it matters, how it has changed over time, and its implications for improving population health and promoting health equity. By tracing its history and contours from ancient societies on through the development of--and debates within--contemporary epidemiology worldwide, Dr. Krieger shows how epidemiologic theory has long shaped epidemiologic practice, knowledge, and the politics of public health.

Man-made Medicine Kary L. Moss 1996 If not for the reproductive functions of women, would there be anything called women's health care? A review of medical literature, practice, and policy in this country would suggest that the answer is no. Offering a startling view of the current state of health care for women in the United States and laying the foundation for a new, widely defined women's medicine, Man-Made Medicine makes an urgent statement about gender bias in the medical establishment and its pernicious effects on the well-being of women and the care they receive. These essays by physicians, lawyers, activists, and scholars present a rare interdisciplinary approach to a complex set of issues. Gender stereotyping and bias in the collection, analysis, and reporting of scientific data and in the ways health-related news is covered by the media are examined. The exclusion of women from the health care policy-making process and the effect such exclusion has on the determination of priorities among potential areas of research are also explored. With discussions of the plight of specific populations of women whose health care needs are not being sufficiently met--for example, immigrants, prisoners, the mentally ill, or women with HIV/AIDS, disabilities, or reproductive health problems--this book considers matters of race and class within the parameters of gender as it builds a fundamental challenge to the existing health care system. A range of current reform proposals are also evaluated in terms of their potential impact on women. Suggesting no less than a radical rethinking of women's medicine, Man-Made Medicine gives essential direction to the discussions that will shape the future of health care in this country. It will be of great interest to a wide audience, including health care advocates, policymakers, scholars, and readers generally concerned with women's health issues. Feminist Rhetorical Science Studies Julie Jung 2018-01-30 This edited collection disrupts tendencies in feminist science studies to dismiss rhetoric as having concern only for language, and it counters posthumanist theories that ignore human materialities and asymmetries of power as co-constituted with and through distinctions such as gender, sex, race, and ability. The eight essays of *Feminist Rhetorical Science Studies: Human Bodies, Posthumanist Worlds* model methodologies for doing feminist research in the rhetoric of science. Collectively they build innovative interdisciplinary bridges across the related but divergent fields of feminism, posthumanism, new materialism, and the rhetoric of science. Each essay addresses a question: How can feminist rhetoricians of science engage responsibly with emerging theories of the posthuman? Some contributors respond with case studies in medical practice (fetal ultrasound; patient noncompliance), medical science (the neuroscience of sex differences), and health policy (drug trials of the U.S. Food and Drug Administration); others respond with a critical review of object-oriented ontology and a framework for researching women technical writers in the workplace. The contributed essays are in turn framed by a comprehensive introduction and a final chapter from the editors, who argue that a key contribution of feminist posthumanist rhetoric is that it rethinks the agencies of people, things, and practices in ways that can bring about more ethical human relations. Individually the contributions offer as much variety as consensus on matters of methodology. Together they demonstrate how feminist posthumanist and materialist approaches to science expand our notions of what rhetoric is and does, yet they manage to do so without sacrificing what makes their inquiries distinctively rhetorical.

The Future of the Public's Health in the 21st Century Institute of Medicine 2003-02-01 The anthrax incidents following the 9/11 terrorist attacks put the spotlight on the nation's public health agencies, placing it under an unprecedented scrutiny that added new dimensions to the complex issues considered in this report. *The Future of the Public's Health in the 21st Century* reaffirms the vision of Healthy People 2010, and outlines a systems approach to assuring the nation's health in practice, research, and policy. This approach focuses on joining the unique resources and perspectives of diverse sectors and entities and challenges these groups to work in a concerted, strategic way to promote and protect the public's health. Focusing on diverse partnerships as the framework for public health, the book discusses: The need for a shift from an individual to a population-based

approach in practice, research, policy, and community engagement. The status of the governmental public health infrastructure and what needs to be improved, including its interface with the health care delivery system. The roles nongovernment actors, such as academia, business, local communities and the media can play in creating a healthy nation. Providing an accessible analysis, this book will be important to public health policy-makers and practitioners, business and community leaders, health advocates, educators and journalists.
