The Lonely Guy and The Slightly Older Guy - Bruce Jay Friedman 2007-12-01

The New York Times–bestselling author finds the pulse of the aging American male in two ingeniously funny novels. “I just laughed myself sick” (Neil Simon). Two classic works of comic self-help fiction by “one of the funniest writers in America” available together for the first time in a single ebook edition (John Gregory Dunne). With its “sparkling . . . winsome and true” look at the single male in America—from his sad new apartment furnishings to his career struggles to the mystifying dating world—Bruce Jay Friedman’s *The Lonely Guy’s Book of Life* was as cringingly relatable to both men and women when it was first published in 1978 as is today (*The New York Times Book Review*). The inspiration for Steve Martin’s classic cult film comedy, *The Lonely Guy*, it was hailed as “the funniest book of this year, or most any other. You don’t close this book. You just start reading it again immediately. I loved every page—and laughed out loud on most of them” (Dan Jenkins, author of *Semi-Tough* and *Dead Solid Perfect*). Twenty years later, Friedman returned to the subject with *The Slightly Older Guy*, finding his quarry no longer alone, maybe a little less lonely, not so young anymore, faltering at fashion, pondering a new career, but just as resiliently witty. Featuring a new afterword, *The Considerably Older Guy* offers advice on such topics as divorce, grandchildren, exercise, diet, and insomnia. “If you believe in reading, then when a book comes along by Friedman, you have to read it. It’s as simple as that” (*The Washington Post Book World*).

CRC Handbook of Medicinal Spices - James A. Duke 2002-09-27

"Let food be your medicine, medicine your food."-Hippocrates, 2400 B.C. Author James A. Duke predicts that spices such as capsicum, cinnamon, garlic, ginger

The Psychological Basis of Perfumery - J. Stephan Jellinek 2012-12-06

During the many years of its publication and subsequent revisions, Paul Jellinek's book has been the standard work on its subject. This new edition, translated into English for the first time, was conceived in response to the increased interest in recent years in perfumes and the sense of smell. This interest has come not only from within the highly competitive perfumery industry, but also from psychologists and market researchers. The original text has impressively withstood the test of time and the approach of this new book has been to supplement it with chapters that are now of critical importance, but which were only touched upon in the original book. A market researcher looks at why people use perfumes; a psychologist examines the motivation of perfume choice; another psychologist discusses odours and a perfumer looks at the effects of odours on human experience and behaviour. In the final chapter the editor compares the original author's views with those of today's experts and suggests which aspects are still valid and in what areas divergent views now prevail. This book is written principally to provide a scientific basis to the craft of perfumery and to enable formulators and marketers to understand why the smells they create and sell have the effect they do. It allows a systematic approach to the development of these products. Others outside the industry, including psychologists in academia, will find the book an essential reference source.

Handbook of African Medicinal Plants, Second Edition - Maurice M. Iwu 2014-02-04

With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources. While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the *Handbook of African Medicinal Plants* provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of traditional remedies, including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs

with botanical names, common names, synonyms, African names, habitat and distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the plants.

Handbook of Spices, Seasonings, and Flavorings, Second Edition - Susheela Raghavan 2006-10-23

An A to Z Catalog of Innovative Spices and Flavorings Designed to be a practical tool for the many diverse professionals who develop and market foods, the Handbook of Spices, Seasonings, and Flavorings combines technical information about spices—forms, varieties, properties, applications, and quality specifications — with information about trends, spice history, and the culture behind their cuisines. The book codifies the vast technical and culinary knowledge for the many professionals who develop and market foods. While many reference books on spices include alphabetized descriptions, the similarity between this book and others ends there. More than just a list of spices, this book covers each spice's varieties, forms, and the chemical components that typify its flavor and color. The author includes a description of spice properties, both chemical and sensory, and the culinary information that will aid in product development. She also explains how each spice is used around the world, lists the popular global spice blends that contain the spice, describes each spice's folklore and traditional medicine usage, and provides translations of each spice's name in global languages. New to this edition is coverage of spice labeling and a chapter on commercial seasoning formulas. Going beyond the scope of most spice books, this reference describes ingredients found among the world's cuisines that are essential in providing flavors, textures, colors, and nutritional value to foods. It explores how these ingredients are commonly used with spices to create authentic or new flavors. The author has created a complete reference book that includes traditionally popular spices and flavorings as well as those that are emerging in the US to create authentic or fusion products. Designed to help you meet the challenges and demands of today's dynamic marketplace, this book is a complete guide to developing and marketing successful products.

Perfumery - Steve Van Toller 2013-04-17

THE SENSE OF SMELL The nose is normally mistakenly assumed to be the organ of smell reception. It is not. The primary function of the nose is to regulate the temperature and humidity of inspired air, thereby protecting the delicate linings of the lungs. This is achieved by the breathed air passing through narrow passageways formed by three nasal turbinates in each nostril. The turbinates are covered by spongy vascular cells which can expand or contract to open or close the nasal pathways. The olfactory receptors, innervated by the 1st cranial nerve, are located at the top of the nose. There are about 50 million smell receptors in the human olfactory epithelia, the total size of which, in humans, is about that of a small postage stamp, with half being at the top of the left and half at the top of the right nostril. The receptive surfaces of olfactory cells are ciliated and extend into a covering layer of mucus. There is a constant turnover of olfactory cells. Their average active life has been estimated to be about 28 days.

The Perfume Handbook - N. Groom 2012-12-06

In 1948 I was posted, as a Political Officer, to a remote part of south-west Arabia on the edge of the great desert called the Empty Quarter. In valleys made fertile by seasonal flood-waters lay the remains of an ancient civilization. I found inscriptions and the ruin sites of towns, palaces and temples. Almost buried under the sand dunes were the tumbled walls of a great city. From here, two thousand years before, huge camel caravans had trudged their way along 1600 miles of burning sand and rocks to Petra and Gaza, burdened with a most precious cargo - frankincense, myrrh and other perfume materials for the courts, temples and perfume shops of Rome. My book Frankincense and Myrrh delved into the details of this romantic trade and led to a broader interest in the perfumes of ancient times. Then, researching on behalf of a perfume house into the Arab contribution to perfumery, I came across the collection of perfume recipes assembled by the Arab philosopher-scientist Yaqub al-Kindi, which have never been translated into English (some, which I have translated myself, are now included in an appendix to this book). I realized that in that work I had found key evidence to demonstrate how the medieval Arab perfume makers had been the bridge in perfume history between ancient and modern times. Perfumery could now be seen as an art with a continuous history of development since the dawn of civilization.
