Imaging and Imagining the Fetus Malcolm Nicolson 2013-02-15 How engineers and clinicians developed the ultrasound diagnostic scanner and how its use in obstetrics became controversial. To its proponents, the ultrasound scanner is a safe, reliable, and indispensable aid to diagnosis. Its detractors, on the other hand, argue that its development and use are driven by the technological enthusiasms of doctors and engineers (and the commercial interests of manufacturers) and not by concern to improve the clinical care of women. In some U.S. states, an ultrasound scan is now required by legislation before a woman can obtain an abortion, adding a new dimension to an already controversial practice. *Imaging and Imagining the Fetus* engages both the development of a modern medical technology and the concerted critique of that technology. Malcolm Nicolson and John Fleming relate the technical and social history of ultrasound imaging—from early experiments in Glasgow in 1956 through wide deployment in the British hospital system by 1975 to its ubiquitous use in maternity clinics throughout the developed world by the end of the twentieth century. Obstetrician Ian Donald and engineer Tom Brown created ultrasound technology in Glasgow, where their prototypes were based on the industrial flaw detector, an instrument readily available to them in the shipbuilding city. As a physician, Donald supported the use of ultrasound for clinical purposes, and as a devout High Anglican he imbued the images with moral significance. He opposed abortion—decisions about which were increasingly guided by the ultrasound technology he pioneered—and he occasionally used ultrasound images to convince pregnant women not to abort the fetuses they could now see. *Imaging and Imagining the Fetus* explores why earlier innovators failed where Donald and Brown succeeded. It also shows how ultrasound developed into a "black box" technology whose users can fully appreciate the images they produce but do not, and have no need to, understand the technology, any more than do users of computers. These "images of the fetus may be produced by machines," the authors write, "but they live vividly in the human imagination."

The Public Life of the Fetal Sonogram Janelle S. Taylor 2008-09-09 In *The Public Life of the Fetal Sonogram*, medical anthropologist Janelle S. Taylor analyzes the full sociocultural context of ultrasound technology and imagery. Drawing upon ethnographic research both within and beyond the medical setting, Taylor shows how ultrasound has entered into public consumer culture in the United States. The book documents and critically analyzes societal uses for ultrasound such as nondiagnostic "keepsake" ultrasound businesses that foster a new consumer market for these blurry, monochromatic images of eagerly awaited babies, and anti-abortion clinics that use ultrasound in an attempt to make women bond with the fetuses they carry, inciting a pro-life state of mind. This book offers much-needed critical awareness of the less easily recognized ways in which ultrasound technology is profoundly social and political in the United States today.

My Pink Diary L. A. Reilly 2019-04-29 Most people think breast cancer only affects women and men who have a family history. Stay healthy, eat right, don't smoke, get yearly mammograms. The radiologist tells you you're good until next year. You are all set. Wrong! Breast cancer can affect anyone, any age, any lifestyle. Hidden from view. Like an alien hiding in your chest. Cancer cells put up a barrier around themselves. A disguise, so your body doesn't know it's there. The only way to protect yourself is a good screening. For some of us, we have dense to extremely dense breast tissue which is like looking at a snow globe. Impossible to see anything. We need ultrasounds and MRIs. We need good facilities and good doctors. We need hope. My book, *My Pink Diary: A Survival Guide. What Every Woman Should Know*, is my personal journey with breast cancer from day one to the present. My words have helped so many women that I know. I wanted to write down all of my experiences and research to help all women. Not just the ones I know. If my words can save women and help them go through breast cancer or procedures with a sense of ease and familiarity, I will feel complete. Every time I hear someone I know or a friend of a friend has breast cancer, I just want to give them my book. Friends ask me all the time if my book is ready so they can give to someone they know who is going through breast cancer. My journey can help so many women on so many levels. Of course, I added in some humor. Because laughter, sometimes, can be one of the best remedies. So starts my journey. The diary describes everything in detail with pictures, charts and research. I walked into every appointment and test blind, frightened and ill informed. Googling everything was foolish and scary. I needed facts. What would I be going through? What can I expect from surgery, chemo and radiation? Every day was a journey. Here it is. Everything you need to know. Even my medication schedule that I had to follow that prevented me from being sick from my endless chemo sessions. I've included every detail of what to expect and many unexpected details I wish I had known prior. Think of my diary as a guide through anyone's journey. What does chemo feel like? Lumpectomy vs Mastectomy? What will happen before and after surgery or when I have biopsies? I wish I had been more prepared. So I wrote this diary to prepare the reader. I was diagnosed with Stage 2B breast cancer in 2015. I had been faithfully going for routine mammograms since I was 39. At age 46, it was the first time in 7 years I was told I had dense breasts. No wonder during my past mammograms the radiologists didn't see anything. They really couldn't see anything. The entire mammogram screen was white! I should have been sent for better testing at age 39. This time, they thought they saw something. "Maybe nothing", they said. After an ultrasound and MRI, they found a large suspicious lump along with 5 other lumps. 6 lumps in my chest, 3 in each breast that had been undetected with the traditional 2D mammogram. Who knows how long they have been in my breasts. Today I am cancer free but live year to year waiting for the results of my MRIs. My journey had to be shared. I have been a graphic designer for over 20 years. I graduated college with a degree in Journalism and a minor in English. I wrote and designed *My Diary*. Although there are thousands of books on breast cancer, to the best of my knowledge, mine would be the only book in diary form jam-packed with information every woman should know written in an easy to read and understand format without technical jargon. I wanted to write my book as if I was talking to a friend.

How to "fabricate" a TOTAL QUALITY Son Mario Garcia Varela 2019-05-22 If you're interested in quality when you acquire any product: why shouldn't quality be important to you when you are trying to produce a descendant whom you'll love intensely as long as you live? In the corrupt modern environment, it is impossible to achieve quality offspring without knowledge. Unfortunately, such knowledge is not available in doctors' offices. This book, underpinned on a first-class scientific base, was born from the urgent need to warn future parents of the innumerable dangers that modernity imposes on the process of procreating humans. Its pages speak of a tragedy (avoidable): the actual humans lose qualities in each generation. The manufacture of a human being begins with the choice of a partner and ends when the product reaches 18 years of age. Throughout this long journey, multiple risks threaten, like evil elves, the quality that the offspring will have as long as it lives, both in its form and in its behavior. I'm not trying to give you simple advice for your baby to be born "healthy"; a few examples will make it clear to you that making a human that meets the highest standards of quality is an extremely complex challenge: - If a pregnant woman does not get enough sunlight on her bare skin, she will be deficient in vitamin D and her child will be at high risk of (lifelong) type 1 diabetes. - A child born by cesarean section will accumulate large amounts of fat in the waist when reaches adulthood and nothing and no one can change that fate. - Ultrasound damages the fetal brain. Result: autism. - Maternal caffeine consumption during pregnancy is associated with an 87% increased risk of "permanent" obesity in the offspring. - Cell phone use by the pregnant woman damages the fetal brain which can result in behavioral problems such as delinquency and drug addiction. - If a pregnant woman uses nail polish, she will have high levels of phthalates in her blood and her male child can be born with a micropenis (tiny penis) and will remain so for as long as he lives. - A human who is born by cesarean section will have five units less IQ than if he had been born vaginally. Most C-sections are unnecessary and are made by the medical industry for profit. - A beautiful face is only given by prolonged breastfeeding because bottle feeding does not produce a harmonious development of the bones of the face. - A child who does not receive prolonged breastfeeding will (irremediably) have atherosclerosis and a high risk of heart attack when it reaches adulthood. - Maternal stress during gestation feminizes the brain of the male fetus and masculinizes the brain of the female fetus. Result: homosexuality. - If a woman consumes liquids or food packaged in plastic, she will have high concentrations of phthalates in her blood, and her descendant may behave aggressively or be a criminal. - A human conceived in the sparsely sunny winter months will have osteoporosis and fractures when it reaches old age. To make a human being without this instructive entails the possibility that it presents irreparable defects that can be manifested in any age.

The One and Only Face of Islam Ghazi 2013-10-23 Women's rights as best and civilized as it gets and everything about Islam from some of Prophet Mohammed's biography to the importance of science in Islam and animal rights. Muslims worship God. The God—in Arabic, Allah. Muslims worship the Creator—God of Abraham, Noah, David, Solomon, Moses, Jesus, and Mohammed. About only 20 percent of Muslims in the world are Arabs. Islam is not the religion of Arabs; nor are all Arabs Muslims. Many Arabs are Jews and Christians, and they also say Allah referring to God: The God. Muslims are the believers; in the Qur'an, God called followers of Islam the believers because they believe in all God's prophets, books, messages, and religions. The believers—or, as called today, Muslims—proudly name their children Abraham, David, Solomon, Moses, Jesus, Mohammed, and other names of God's prophets. Out of all the women that came in the Qur'an, the Virgin Mary is the only woman named by name in the Qur'an. Muslims also proudly named many of their daughters Mary. All stages of pregnancy are described in the Qur'an. More than 1,400 years ago, God gave pregnant women a free ultrasound to picture and to know what's going on inside them . . . and much more. Some must-know key factors about Islam; women's rights as best and civilized as it gets; some of Prophet Mohammed's biography, science in Islam, and animal rights.

Ultrasound Imaging in Reproductive Medicine Laurel A. Stadtmauer 2019-07-19 Now in an updated edition, this is the most comprehensive book on modern ultrasound imaging in assisted reproductive technology (ART) and reproductive medicine. Fully revised and expanded, it covers emerging technologies possible with the improvement in ultrasound equipment. 3-D monitoring of ovarian follicles, bidirectional vibrant color and Doppler, and improved 3-D and 4-D imaging of reproductive structures are discussed. MRI-guided ultrasound procedures are covered, and comparisons of 3-D imaging with MRI imaging for uterine anomalies is reviewed with an emphasis on the advantages of 3-D performed in the gynecologist's office, and as a less expensive modality. The overall approach of the original edition is maintained, starting with ultrasound safety and technique and diagnosis of the ovary, uterus and fallopian tubes (both normal and pathologic), followed by both male and female infertility and ART treatments and procedures. Ultrasound monitoring of follicular development, the endometrium, and as an aid in embryo transfer to maximize IVF success rates are reviewed. Topics new to this edition include updated information on the diagnosis of benign and malignant adnexal masses, 3-D follicle monitoring, and the diagnosis of adenomyosis and endometriosis, including deep inseminated endometriosis. Additionally, the evaluation of endometrial receptivity, the use of contrasts for fallopian tube patency, controversies regarding septate uterus versus arcuate uterus with the use of 3-D ultrasound, and 3-D ultrasound with saline infusion sonogram and early pregnancy ultrasound are all discussed. An excellent resource for reproductive medicine and ART specialists, gynecologists and ultrasonographers alike, *Ultrasound Imaging in Reproductive Medicine, Second Edition* covers all that clinicians need to know about the role of ultrasound, from the first time a woman comes into the clinic for treatment, including ART, to early pregnancy monitoring.
