Perfumes - Luca Turin 2010-08-06

'I've long wished perfumery to be taken seriously as an art, and for scent critics to be as fierce as opera critics, and for the wearers of certain "fragrances" to be hissed in public, while others are cheered. This year has brought Perfumes: The Guide by Luca Turin and Tania Sanchez, which I breathed in, rather than read, in one delighted gulp.' Hilary Mantel, Guardian Perfumes: The Guide is the culmination of Turin's lifelong obsession and rare scientific flair and Sanchez's stylish and devoted blogging about every scent that she's ever loved and loathed. Together they make a fine and utterly persuasive argument for the unrecognised craft of perfume-making. Perfume writing has certainly never been this honest, compelling or downright entertaining.

Perfumery - Steve Van Toller 2013-04-17

THE SENSE OF SMELL The nose is normally mistakenly assumed to be the organ of smell reception. It is not. The primary function of the nose is to regulate the temperature and humidity of inspired air, thereby protecting the delicate linings of the lungs. This is achieved by the breathed air passing through narrow passageways formed by three nasal turbinates in each nostril. The turbinates are covered by spongy vascular cells which can expand or contract to open or close the nasal pathways. The olfactory receptors, innervated by the 1st cranial nerve, are located at the top of the nose. There are about 50 million smell receptors in the human olfactory epithelia, the total size of which, in humans, is about that of a small postage stamp, with half being at the top of the left and half at the top of the right nostril. The receptive surfaces of olfactory cells are ciliated and extend into a covering layer of mucus. There is a constant turnover of olfactory cells. Their average active life has been estimated to be about 28 days.

Fragrant - Mandy Aftel 2014-10-16

Winner of the 2016 Perfumed Plume Award The "Alice Waters of American natural perfume" (indieperfume.com) and author of the Art of Flavor celebrates our most potent sense, through five rock stars of the fragrant world Mandy Aftel is widely acclaimed as a trailblazer in natural perfumery. Over two decades of sourcing the finest aromatic ingredients from all over the world and creating artisanal fragrances, she has been

an evangelist for the transformative power of scent. In *Fragrant*, through five major players in the epic of aroma, she explores the profound connection between our sense of smell and the appetites that move us, give us pleasure, make us fully alive. Cinnamon, queen of the Spice Route, touches our hunger for the unknown, the exotic, the luxurious. Mint, homegrown the world over, speaks to our affinity for the familiar, the native, the authentic. Frankincense, an ancient incense ingredient, taps into our longing for transcendence, while ambergris embodies our unquenchable curiosity. And exquisite jasmine exemplifies our yearning for beauty, both evanescent and enduring. In addition to providing a riveting initiation into the history, natural history, and philosophy of scent, *Fragrant* imparts the essentials of scent literacy and includes recipes for easy-to-make fragrances and edible, drinkable, and useful concoctions that reveal the imaginative possibilities of creating with—and reveling in—aroma. Vintage line drawings make for a volume that will be a treasured gift as well as a great read.

[Handbook of African Medicinal Plants, Second Edition](#) - Maurice M. Iwu
2014-02-04

With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources. While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the *Handbook of African Medicinal Plants* provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of traditional remedies, including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs with botanical names, common names, synonyms, African names, habitat

and distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the plants.

The Psychological Basis of Perfumery - J. Stephan Jellinek
2012-12-06

During the many years of its publication and subsequent revisions, Paul Jellinek's book has been the standard work on its subject. This new edition, translated into English for the first time, was conceived in response to the increased interest in recent years in perfumes and the sense of smell. This interest has come not only from within the highly competitive perfumery industry, but also from psychologists and market researchers. The original text has impressively withstood the test of time and the approach of this new book has been to supplement it with chapters that are now of critical importance, but which were only touched upon in the original book. A market researcher looks at why people use perfumes; a psychologist examines the motivation of perfume choice; another psychologist discusses odours and a perfumer looks at the effects of odours on human experience and behaviour. In the final chapter the editor compares the original author's views with those of today's experts and suggests which aspects are still valid and in what areas divergent views now prevail. This book is written principally to provide a scientific basis to the craft of perfumery and to enable formulators and marketers to understand why the smells they create and sell have the effect they do. It allows a systematic approach to the development of these products. Others outside the industry, including psychologists in academia, will find the book an essential reference source.

Neurobiology of Sensation and Reward - Jay A. Gottfried 2011-03-28
Synthesizing coverage of sensation and reward into a comprehensive systems overview, *Neurobiology of Sensation and Reward* presents a cutting-edge and multidisciplinary approach to the interplay of sensory and reward processing in the brain. While over the past 70 years these areas have drifted apart, this book makes a case for reuniting sensation and reward by highlighting the important links and interface between the two. Emphasizing the role of reward in reinforcing behaviors, the book begins with an exploration of the history, ecology, and evolution of sensation and reward. Progressing through the five senses, contributors explore how the brain extracts information from sensory cues. The chapter authors examine how different animal species predict rewards, thereby integrating sensation and reward in learning, focusing on effects in anatomy, physiology, and behavior. Drawing on empirical research, contributors build on the themes of the book to present insights into the human sensory rewards of perfume, art, and music, setting the scene for further cross-disciplinary collaborations that bridge the neurobiological interface between sensation and reward.

Neurobiology of Chemical Communication - Carla Mucignat-Caretta
2014-02-14

Intraspecific communication involves the activation of chemoreceptors and subsequent activation of different central areas that coordinate the responses of the entire organism—ranging from behavioral modification to modulation of hormones release. Animals emit intraspecific chemical signals, often referred to as pheromones, to advertise their presence to members of the same species and to regulate interactions aimed at establishing and regulating social and reproductive bonds. In the last two decades, scientists have developed a greater understanding of the neural processing of these chemical signals. *Neurobiology of Chemical Communication* explores the role of the chemical senses in mediating intraspecific communication. Providing an up-to-date outline of the most recent advances in the field, it presents data from laboratory and wild species, ranging from invertebrates to vertebrates, from insects to humans. The book examines the structure, anatomy, electrophysiology,

and molecular biology of pheromones. It discusses how chemical signals work on different mammalian and non-mammalian species and includes chapters on insects, Drosophila, honey bees, amphibians, mice, tigers, and cattle. It also explores the controversial topic of human pheromones. An essential reference for students and researchers in the field of pheromones, this is also an ideal resource for those working on behavioral phenotyping of animal models and persons interested in the biology/ecology of wild and domestic species.

The Erotic History of Advertising - Tom Reichert 2010-04-06

...a number of fascinating anecdotes...well-documented and fully illustrated...an interesting study in excess and American values. -Blue Ridge Business Journal...explores [sex in advertising] with zest, acuity, and almost suppressed humor...engagingly informative...sparkling social history. -ForeWord...will satisfy the standards of professionalsàacademic or commercial...This is obligatory stuff for anybody in the business...a delightfully provocative read for anyone who is the target of advertisingùanyone, today, who is not actually serving life tenure in a monastery.ö-Baltimore SunVictoria's Secret and Calvin Klein are brand names practically synonymous with sexually suggestive advertising. Considering their high public profile and huge profits, anyone can see that sex sells. Despite polls indicating that the public would like to see less sex in advertising, Americans don't mean what they say. They continue to respond to the lure of provocative marketing and, most important to business, they buy. Knowing this, more and more advertisers are testing the limits of public taste in the highly competitive battle to capture the consumer's attention.All of this is well documented in Tom Reichert's profusely illustrated book, *The Erotic History of Advertising*. As Reichert amply demonstrates, the use of sex in advertising is far from being a recent fad. As long ago as the 1880s, Duke Cigarettes enclosed in their packs--not baseball cards--but similar small cards showing scantily clad women of the stage, which encouraged purchasers to keep buying to complete the whole set. In the 1920s Woodbury soap became the market leader largely through ads with

images of romantic situations and claims that Woodbury soap made a woman's skin irresistible to the touch. In the 1930s White Owl cigars had great success in marketing through ads showing attractive couples locked in a passionate kiss, suggesting that only White Owls left the breath smelling pleasant. Warner Lambert capitalized on the same kind of imagery for decades to connect Listerine mouthwash with romantic success.With numerous illustrations showing many erotic ads--some campy, some esthetically elegant, some homoerotic--that push the boundaries of sexuality and taste from over a century of product marketing, Reichert not only tracks the history of sex in advertising but also explores the many factors that make the link between sex and our consumer culture so successful. Among other things, he considers the range of salacious imagery, from mildly suggestive to the use of outright nudity; the emotional impact of sexy ads; the influence of sex on brand recognition; what works and what doesn't; the differences between male and female responses; and the possible harms of using sex in advertising, especially in regard to young audiences and the perpetuation of female stereotypes.This thoughtful, enjoyable, and fascinating look into the world of advertising--from the late 1800s to the most erotic ads of today--will appeal to both media-savvy consumers and aficionados of pop culture.Tom Reichert, Ph.D., an Advertising Professor at the University of Alabama, has dedicated ten years to studying the prevalence of sex in advertising and its effect on persuasion. He has published on this topic in many scholarly journals, is a contributor to the *Encyclopedia of Advertising*, and is the lead editor and a contributor to *Sex in Advertising: Perspectives on the Erotic Appeal*.
