Handbook of African Medicinal Plants, Second Edition Maurice M. Iwu 2014-02-04 With over 50,000 distinct species in sub-Saharan Africa alone, the African continent is endowed with an enormous wealth of plant resources. While more than 25 percent of known species have been used for several centuries in traditional African medicine for the prevention and treatment of diseases, Africa remains a minor player in the global natural products market largely due to lack of practical information. This updated and expanded second edition of the Handbook of African Medicinal Plants provides a comprehensive review of more than 2,000 species of plants employed in indigenous African medicine, with full-color photographs and references from over 1,100 publications. The first part of the book contains a catalog of the plants used as ingredients for the preparation of traditional remedies, including their medicinal uses and the parts of the plant used. This is followed by a pharmacognostical profile of 170 of the major herbs, with a brief description of the diagnostic features of the leaves, flowers, and fruits and monographs with botanical names, common names, synonyms, African names, habitat and distribution, ethnomedicinal uses, chemical constituents, and reported pharmacological activity. The second part of the book provides an introduction to African traditional medicine, outlining African cosmology and beliefs as they relate to healing and the use of herbs, health foods, and medicinal plants. This book presents scientific documentation of the correlation between the observed folk use and demonstrable biological activity, as well as the characterized constituents of the plants.

Brain Sense Faith Hickman Brynie 2009-09-28 Complex and crucially important, the senses collect the massive amount of information we need to navigate daily life, and serve as a filter between our inner selves and the larger world. But the science of how the senses work has been little understood—until now. New research is rapidly uncovering fascinating insights into how the brain processes sensory information. It's not simply a matter of the brain controlling the senses; the senses actually stimulate brain development. For example, the brain's sound-processing centers mature properly only when sound impulses trigger them to do so—which is why cochlear implants are best used before the age of three. Brain Sense reveals this and a wealth of findings on how the brain and senses interact, as it examines each of the five major senses: touch, smell, taste, vision, and hearing. With eloquent writing and gripping stories, the author deploys a rare gift for explaining complex scientific ideas in a way that is clear and comprehensible. She introduces the scientists at the forefront of "brain sense" studies—neurologists, brain mappers, biochemists, physicians, cognitive psychologists, and others—as well as real-life people who are contributing to the research and benefiting from its practical applications, such as haptic devices to assist people who have lost limbs or rehabilitative software for those who have suffered impairments to their motion vision. You'll find new research that explains: • Why placebos work by changing the way the brain processes pain • How humans respond to pheromones in the same manner as other animals • How taste is highly influenced by expectations of taste • Why color significantly aids the ability to remember an object • How the capacity for language is already at work in newborn babies • What happens in the brain to produce sensory experiences such as déjà vu and phantom limb pain • And much more Expansive and enlightening, Brain Sense shows us that the brain is both flexible and variable, and the reality that we construct based on inputs gathered from the senses differs from person to person. It sheds a much-needed light on the elusive workings of the extraordinary human brain.

Pheromone Communication in Moths Jeremy D. Allison 2016-10-25 Common among moths is a mate-finding system in which females emit a pheromone that induces males to fly upwind along the pheromone plume. Since the chemical pheromone of the domesticated silk moth was identified in 1959, a steady increase in the number of moth species whose pheromone attractants have been identified now results in a rich base for review and synthesis. Pheromone Communication in Moths summarizes moth pheromone biology, covering the chemical structures used by the various lineages, signal production and perception, the genetic control of moth pheromone traits, interactions of pheromones with host-plant volatiles, pheromone dispersal and orientation, male pheromones and courtship, and the evolutionary forces that have likely shaped pheromone signals and their role in sexual selection. Also included are chapters on practical applications in the control and monitoring of pest species as well as case studies that address pheromone systems in a number of species and groups of closely allied species. Pheromone Communication in Moths is an invaluable resource for entomologists, chemical ecologists, pest-management scientists, and professionals who study pheromone communication and pest management.

The Erotic History of Advertising Tom Reichert 2010-04-06 ...a number of fascinating anecdotes...well-documented and fully illustrated...an interesting study in excess and American values. -Blue Ridge Business Journal...explores [sex in advertising] with zest, acuity, and almost suppressed humor...engagingly informative...sparkling social history.-ForeWord...will satisfy the standards of professionalsàacademic or commercial...This is obligatory stuff for anybody in the business...a delightfully provocative read for anyone who is the target of advertisingùanyone, today, who is not actually serving life tenure in a monastery.ö-Baltimore SunVictoria's Secret and Calvin Klein are brand names practically synonymous with sexually suggestive advertising. Considering their high public profile and huge profits, anyone can see that sex sells. Despite polls indicating that the public would like to see less sex in advertising, Americans don't mean what they say. They continue to respond to the lure of provocative marketing and, most important to business, they buy. Knowing this, more and more advertisers are testing the limits of public taste in the highly competitive battle to capture the consumer's attention.All of this is well documented in Tom Reichert's profusely illustrated book, *The Erotic History of Advertising*. As Reichert amply demonstrates, the use of sex in advertising is far from being a recent fad. As long ago as the 1880s, Duke Cigarettes enclosed in their packs--not baseball cards--but similar small cards showing scantily clad women of the stage, which encouraged purchasers to keep buying to complete the whole set. In the 1920s Woodbury soap became the market leader largely through ads with images of romantic situations and claims that Woodbury soap made a woman's skin irresistible to the touch. In the 1930s White Owl cigars had great success in marketing through ads showing attractive couples locked in a passionate kiss, suggesting that only White Owls left the breath smelling pleasant. Warner Lambert capitalized on the same kind of imagery for decades to connect Listerine mouthwash with romantic success.With numerous illustrations showing many erotic ads--some campy, some esthetically elegant, some homoerotic--that push the boundaries of sexuality and taste from over a century of product marketing, Reichert not only tracks the history of sex in advertising but also explores the many factors that make the link between sex and our consumer culture so successful. Among other things, he considers the range of salacious imagery, from mildly suggestive to the use of outright nudity; the emotional impact of sexy ads; the influence of sex on brand recognition; what works and what doesn't; the differences between male and female responses; and the possible harms of using sex in advertising, especially in regard to young audiences and the perpetuation of female stereotypes.This thoughtful, enjoyable, and fascinating look into the world of advertising--from the late 1800s to the most erotic ads of today--will appeal to both media-savvy consumers and aficionados of pop culture.Tom Reichert, Ph.D., an Advertising Professor at the University of Alabama, has dedicated ten years to studying the prevalence of sex in advertising and its effect on persuasion. He has published on this topic in many scholarly journals, is a contributor to the Encyclopedia of Advertising, and is the lead editor and a contributor to *Sex in Advertising: Perspectives on the Erotic Appeal*.

Neurobiology of Sensation and Reward Jay A. Gottfried 2011-03-28 Synthesizing coverage of sensation and reward into a comprehensive systems overview, *Neurobiology of Sensation and Reward* presents a cutting-edge and multidisciplinary approach to the interplay of sensory and reward processing in the brain. While over the past 70 years these areas have drifted apart, this book makes a case for reuniting sensation and reward by highlighting the important links and interface between the two. Emphasizing the role of reward in reinforcing behaviors, the book begins with an exploration of the history, ecology, and evolution of sensation and reward. Progressing through the five senses, contributors explore how the brain extracts information from sensory cues. The chapter authors examine how different animal species predict rewards, thereby integrating sensation and reward in learning, focusing on effects in anatomy, physiology, and behavior. Drawing on empirical research, contributors build on the themes of the book to present insights into the human sensory rewards of perfume, art, and music, setting the scene for further cross-disciplinary collaborations that bridge the neurobiological interface between sensation and reward.

Neurobiology of Chemical Communication Carla Mucignat-Caretta 2014-02-14 Intraspecific communication involves the activation of chemoreceptors and subsequent activation of different central areas that coordinate the responses of the entire organism—ranging from behavioral modification to modulation of hormones release. Animals emit intraspecific chemical signals, often referred to as pheromones, to advertise their presence to members of the same species and to regulate interactions aimed at establishing and regulating social and reproductive bonds. In the last two decades, scientists have developed a greater understanding of the neural processing of these chemical signals. Neurobiology of Chemical Communication explores the role of the chemical senses in mediating intraspecific communication. Providing an up-to-date outline of the most recent advances in the field, it presents data from laboratory and wild species, ranging from invertebrates to vertebrates, from insects to humans. The book examines the structure, anatomy, electrophysiology, and molecular biology of pheromones. It discusses how chemical signals work on different mammalian and non-mammalian species and includes chapters on insects, Drosophila, honey bees, amphibians, mice, tigers, and cattle. It also explores the controversial topic of human pheromones. An essential reference for students and researchers in the field of pheromones, this is also an ideal resource for those working on behavioral phenotyping of animal models and persons interested in the biology/ecology of wild and domestic species.

Chemical Mediation of Coevolution Kevin C. Spencer 2013-10-22 Chemical Mediation of Coevolution explores the degree to which chemicals are the currency of information exchange in coevolved systems; it also reexamines existing concepts of coevolution through interpretation of chemical parameters. The contents of this volume are based on the "Chemical Mediation of Coevolution" symposium held on 14-15 August 1985 as part of the 36th annual AIBS meeting at the University of Florida. The volume contains 18 chapters majority of which address plant-chemical-insect systems. Explorations are also made into mammalian systems and into insect mimicry, as that process derives ultimately from herbivory upon plants. The data thus presented will specifically address chemistry as a factor in the establishment and maintenance of coevolution, and test coevolutionary concepts for their pertinence to chemically mediated systems. It is hoped that this collected work will provide an impetus for careful reconsideration of the possible roles played by chemistry in the establishment, maintenance, and fate of coevolutionary relationships.

Ecology Of Forest Insects A. Szujecki 2012-12-06 Few branches of the biological sciences have developed to such an extent as has ecology in the recent decades. The successful development of this science is directly related to need to create a sound scientific basis by which we can control our diminishing natural resources and integrate this with the control of biological systems of the component species. Studies on the bioenergetics of ecosystems, as well as on the homeostatic mechanisms functioning at the populations and biocenoses levels are of great importance in this respect. The results of these studies are very significant in forestry management which deals with multiannual tree communities - forest stands. It is particularly important in this of the necessity for the possible respect for economic planning, in view prolonged maintenance of forest biocenoses as stable systems. Neither in the present nor in the immediate future can be protection of forest ecosystems consisting of natural plant and animal communities be achieved by the cultivation of resistant forms or the intensification of chemical intervention.
