Making Global MBAs Andrew Orta 2019-10-01 A generation of aspiring business managers has been taught to see a world of difference as a world of opportunity. In Making Global MBAs, Andrew Orta examines the culture of contemporary business education, and the ways MBA programs participate in the production of global capitalism through the education of the business subjects who will be managing it. Based on extensive field

research in several leading US business schools, this groundbreaking ethnography exposes what the culture of MBA training says about contemporary understandings of capitalism in the context of globalization. Orta details the rituals of MBA life and the ways MBA curricula cultivate both habits of fast-paced technical competence and “softer” qualities and talents thought to be essential to unlocking the value of international cultural difference while managing its risks. *Making Global MBAs* provides an essential critique of neoliberal thinking for students and professionals in a wide variety of fields.

The European Administrative Elite John Alexander Armstrong 2015-03-08 Although there have been other studies of elite administrators in France, Great Britain, Germany, and Russia, John Armstrong has made the first systematic comparison of their roles, especially their inclination to participate in economic development. Drawing on role theory and theories of socialization and recruitment, he analyzes the influences that family, secondary school, specialized university instruction, and in-service experiences have had on administrators. Currents of ideas, class concepts of appropriate role behavior, and organizational peculiarities are also examined as possible influences. By exploring this subject over a long period—in some cases reaching as far back as the seventeenth century—this book shows how changing definitions of administrators' roles reflect their position in society and permit the exploration of changing socialization processes. The long time span also shows how factors such as administrative intervention can change from being marginally important to crucial in affecting economic growth. From the diverse European experience the author distills five factors which he hypothesizes have exerted a constant positive influence on administrative intervention in economic development, and suggests how these factors might be applied in analysis of other societies. He also provides a wealth of statistical data and an extensive bibliography. Originally published in 1973. The Princeton Legacy Library uses the latest print-on-demand technology to again make available previously out-of-print books from the distinguished backlist of Princeton University Press. These editions preserve the original texts of these important books while presenting them in durable paperback and hardcover editions. The goal of the Princeton Legacy Library is to vastly increase access to the rich scholarly heritage found in the thousands of books published by Princeton University Press since its founding in 1905.
