Sex, Sexuality and Therapeutic Practice Catherine Butler 2009-10-26 Sexuality is an important area of clients' lives yet it is often neglected, both in the consulting room and in training. This book examines issues of sexuality in a positive and affirming light and considers how sexuality-related issues can be introduced into therapy and training. Sex and sexuality are important to consider in psychotherapy, psychology, counselling and health provision across a variety of contexts and are relevant to clinicians and therapists working in health and mental health settings as well as in specialist services such as sexual and reproductive health and HIV. *Sex, Sexuality and Therapeutic Practice* opens with a general discussion of sex and sexuality before considering how the therapists can think and talk about sexuality in practical and self-reflective ways in different circumstances. Each chapter in the book focuses on a specific topic with areas covered including: sexual diversity across the lifespan health and disability sexual and gender minority issues how culture and sexuality interact. The manual provides up-to-date information, further reading, handouts for clients, self-reflective exercises and examples of training exercises for workshops and teaching. It is an essential resource for health professionals, therapists, clinicians, academics and trainers, and will support the practicing therapist as well as those in training.

Is Two-Tier Health Care the Future? Colleen M. Flood 2020-04-28 Canadians are deeply worried

about wait times for health care. Entrepreneurial doctors and private clinics are bringing Charter challenges to existing laws restrictive of a two-tier system. They argue that Canada is an outlier among developed countries in limiting options to jump the queue. This book explores whether a two-tier model is a solution. In *Is Two-Tier Health Care the Future?*, leading researchers explore the public and private mix in Canada, Australia, Germany, France, and Ireland. They explain the history and complexity of interactions between public and private funding of health care and the many regulations and policies found in different countries used to both inhibit and sometimes to encourage two-tier care, such as tax breaks. This edited collection provides critical evidence on the different approaches to regulating two-tier care across different countries and what could work in Canada. This book is published in English.

[Surgical Techniques in Rectal Cancer](#) Giovanni Dapri 2018-02-09 This book describes the various procedures, including surgery through the abdominal wall, through a transanal access or by the union of both, using an open, laparoscopic, or robotic approach. Worldwide pioneers for each technique are invited as authors and portray in step-by-step detail about each procedure. Of the 32 chapters, 23 are dedicated only for the surgical procedures. Each chapter is enriched by numerous figures, which complement the text, permitting the understanding of each surgical technique from its beginning until the last step. Eight additional chapters are dedicated to the clinical and anatomical aspects of rectal cancer. In the last decade there has been an impressive evolution in the treatment of patients with rectal cancer, with a focus not only on the preservation of a cancer-free life, but the quality of that life. This book has been written to be useful for everyone involved in rectal cancer management. From internists, gastroenterologists, endoscopists, oncologists, radiotherapists and radiologists involved in the treatment of rectal cancer during their daily

practice, to surgeons specialized in colorectal surgery, to junior faculty to trainees, all interested in new and innovative techniques.

Meta-Ethnography George W. Noblit 1988-02 How can ethnographic studies be generalized, in contrast to concentrating on the individual case? Noblit and Hare propose a new method for synthesizing from qualitative studies: meta-ethnography. After citing the criteria to be used in comparing qualitative research projects, the authors define the ways these can then be aggregated to create more cogent syntheses of research. Using examples from numerous studies ranging from ethnographic work in educational settings to the Mead-Freeman controversy over Samoan youth, Meta-Ethnography offers useful procedural advice from both comparative and cumulative analyses of qualitative data. This provocative volume will be read with interest by researchers and students in qualitative research methods, ethnography, education, sociology, and anthropology. "After defining metaphor and synthesis, these authors provide a step-by-step program that will allow the researcher to show similarity (reciprocal translation), difference (refutation), or similarity at a higher level (lines or argument synthesis) among sample studies....Contain(s) valuable strategies at a seldom-used level of analysis." --Contemporary Sociology "The authors made an important contribution by reframing how we think of ethnography comparison in a way that is compatible with the new developments in interpretive ethnography. Meta-Ethnography is well worth consulting for the problem definition it offers." --The Journal of Nervous and Mental Disease "This book had to be written and I am pleased

it was. Someone needed to break the ice and offer a strategy for summarizing multiple ethnographic studies. Noblit and Hare have done a commendable job of giving the research community one approach for doing so. Further, no one else can now venture into this area of synthesizing qualitative studies without making references to and positioning themselves vis-a-vis this volume." -Educational Studies

Climate Refugees in South Asia Stellina Jolly 2018-12-28 This book addresses the forms of legal protection extended to people displaced due to the consequences of climate change, and who have either become refugees by crossing international borders or are climatically displaced persons (CDPs) in their own homelands. It explores the legal response of the South Asian Jurisdictions to these refugee-like situations, and also to what extent these people are protected under current international law. The book critically examines and assesses whether States have obligations to protect people displaced by climate change under international refugee law (IRL) and international climate change law (ICCL). It discusses the issue of climate migration in South Asia, analyzes the legal and judicial response initiated by South Asian nations, and also investigates the role of SAARC in relation to climate change and climate refugees. Drawing on the International Legal Standards and States' Practices in South Asia regarding climate refugees, the book shows how IRL, ICCL, and IHRL (international human rights law) have been used to address and identify the gaps in the global legal protection framework concerning the contours of the normative debate on climate refugees, climate change displacement, migration, forced migration, susceptibility to climate change, typology of climate change-induced displacement, role of the SAARC and its municipal legal systems, approaches to climate change, human mobility and developing a hybrid regional law, or advocating a legal alternative of equal measure in a region characterized by diversity and multiculturalism. what's really going on inside of you? Many scientists believe that emotions come from a specific part of the brain, triggered by the world around us. The thrill of seeing an old friend, the fear of losing someone we love – each of these sensations seems to arise automatically and uncontrollably from within us, finding expression on our faces and in our behaviour, carrying us away with the experience. This understanding of emotion has been around since Plato. But what if it is wrong? In *How Emotions Are Made*, pioneering psychologist and neuroscientist Lisa Feldman Barrett draws on the latest scientific evidence to reveal that our common-sense ideas about emotions are dramatically, even dangerously, out of date – and that we have been paying the price. Emotions aren't universally pre-programmed in our brains and bodies; rather they are psychological experiences that each of us constructs based on our unique personal history, physiology and environment. This new view of emotions has serious implications: when judges issue lesser sentences for crimes of passion, when police officers fire at threatening suspects, or when doctors choose between one diagnosis and another, they're all, in some way, relying on the ancient assumption that emotions are hardwired into our brains and bodies. Revising that conception of emotion isn't just good science, Barrett shows; it's vital to our well-being and the health of society itself.

tremendously during the past decade. Advances in genetic medicine and stem cell technology have significantly improved the potential to influence cell and tissue performance, and have recently expanded the field towards regenerative medicine. In recent years a number of approaches have been used routinely in daily clinical practice, others have been introduced in clinical studies, and multitudes are in the preclinical testing phase. Because of these developments, there is a need to provide comprehensive and detailed information for researchers and clinicians on this rapidly expanding field. This book offers, in a single volume, the prerequisites of a comprehensive understanding of tissue engineering and regenerative medicine. The book is conceptualized according to a didactic approach (general aspects: social, economic, and ethical considerations; basic biological aspects of regenerative medicine: stem cell medicine, biomolecules, genetic engineering; classic methods of tissue engineering: cell, tissue, organ culture; biotechnological issues: scaffolds; bioreactors, laboratory work; and an extended medical discipline oriented approach: review of clinical use in the various medical specialties). The content of the book, written in 68 chapters by the world's leading research and clinical specialists in their discipline, represents therefore the recent intellect, experience, and state of this bio-medical field.

Longevity is a great gift of medical sciences and modern health care and since the benefit of longevity comes with specific mental health issues of the elderly, this book responds to the heightened need to understand and address the mental health challenges of the elderly.

Beyond Multiculturalism Giuliana B. Prato 2016-04-15 While the anthropological field initially shied away from the debate on multiculturalism, it has been widely discussed within the fields of political theory, social policy, cultural studies and law. *Beyond Multiculturalism* is the first volume of its kind to offer a comparative, worldwide view of multiculturalism, considering both traditional multicultural/multiethnic societies and those where cultural pluralism is relatively new. Its varied

case studies focus on the intersections and relationships between cultural groups in everyday life using employment, identity, consumption, language, legislation and policy making to show the unique contribution anthropologists can bring to multiculturalism studies. Their work will be of great interest to scholars of race, ethnicity, migration, urban studies and social and cultural geography.
