Gravitational Attraction Due to Solids of Revolution and Its Application to Hydraulic Testing of Groundwater Aquifers Brian Neal Damiata 2001

**Gravity** Brian Clegg 2012-10-25 Physicists will tell you that four forces control the universe. Of these, gravity may be the most obvious, but it is also the most mysterious. Newton managed to predict the force of gravity but couldn't explain how it worked at a distance. Then Einstein picked up on the simple premise that gravity and acceleration are interchangeable to devise his mind-bending General Relativity, showing how matter warps space and time. Not only did this explain how gravity worked - and how apparently simple gravitation has four separate components - but it predicted everything from black holes to gravity's effect on time. Whether it's the reality of anti-gravity or the unexpected discovery that a ball and a laser beam drop at the same rate, gravity is the force that fascinates.

**A Treatise on Attractions, Laplace's Functions, and the Figure of the Earth (1871)** John Henry Pratt 2008-08 This scarce antiquarian book is a facsimile reprint of the original. Due to its age, it may contain imperfections such as marks, notations, marginalia and flawed pages. Because we believe this work is culturally important, we have made it available as part of our commitment for protecting, preserving, and promoting the world's literature in affordable, high quality, modern editions that are true to the original work.

**Gravitational Attraction** Angel Martinez 2014-07-21 An amoral, power-hungry admiral kidnaps Isaac and uses him to convince Turk to become a weapon. It will take a group effort to save them.

**Aether and Gravitation** William George Hooper 2018-06-27 Aether and Gravitation by William George Hooper The author in this work endeavours to solve the greatest scientific problem that has puzzled scientists for the past two hundred years. The question has arisen over and over again, since the discovery of universal gravitation by Sir Isaac Newton, as to what is the physical cause of the attraction of gravitation. "Action at a distance" has long ceased to be recognized as a possible phenomenon, although up to the present, the medium and method of gravitational attraction have not yet been discovered. It is, however, generally accepted by scientists, that the only possible medium which can give rise to the phenomena incidental to, and associated with the Law of Gravitation, must be the universal aether, which forms the common medium of all phenomena associated with light, heat, electricity and magnetism. It is impossible, however, to reconcile gravitational phenomena with the present conception of the universal aether medium, and a new theory is therefore demanded, before the long-sought-for explanation will be forthcoming. Professor Glazebrook definitely states the necessity for a new theory in his work on J. C. Maxwell, page 221, where he writes: "We are waiting for some one to give us a theory of the aether, which shall include the facts of electricity and magnetism, luminous radiation, and it may be gravitation." We are delighted to publish this classic book as part of our extensive Classic Library collection. Many of the books in our collection have been out of print for decades, and therefore have not been accessible to the general public. The aim of our publishing program is to facilitate rapid access to this vast reservoir of literature, and our view is that this is a significant literary work, which deserves to be brought back into print after many decades. The contents of the vast majority of titles in the Classic Library have been scanned from the original works. To ensure a high quality product, each title has been meticulously hand curated by our staff. Our philosophy has been guided by a desire to provide the reader with a book that is as close as possible to ownership of the original work. We hope that you will enjoy this wonderful classic work, and that for you it becomes an enriching experience.

*Gravity's Fatal Attraction* Mitchell Begelman 2009-12-21 Richly illustrated with the images from observatories on the ground and in space, and computer simulations, this book shows how black holes were discovered, and discusses our current understanding of their role in cosmic evolution. This second edition covers new discoveries made in the past decade, including definitive proof of a black hole at the center of the Milky Way, evidence that the expansion of the Universe is accelerating, and the new appreciation of the connection between black holes and galaxy formation. There are entirely new chapters on gamma-ray bursts and cosmic feedback. Begelman and Rees blend theoretical arguments with observational results to demonstrate how both approaches contributed to this subject. Clear illustrations and photographs reveal the strange and amazing workings of our universe. The engaging style makes this book suitable for introductory undergraduate courses, amateur astronomers, and all readers interested in astronomy and physics.

Clark presented a simple method by which to calculate the change in sea level caused by the gravitational attraction of an ice cap. In the same paper he also presented some results of a more complex numerical solution of the problem, and the two calculations are in a disagreement. Tapscott points out that, in fact, Clark's more powerful solution is correct. His simple calculation contains an error. The present note points out the reason for the error lest doubt be cast on his numerical method and the many interesting consequences of his thesis.

*Gravity: Realities of conscious world of singularity* Aloysius Sebastian 2019-03-19 This book is a collection of my theories in physics. The main attractions of these theories are some revolutionary thoughts in science like "Gravity has a finite range", the "Big bang scenery inside a black hole" and "particle singularity". It states that the wave nature of a particle is the product of work done by a particle in a medium. The wave is creating in a medium. Also it states that information can travel faster than light and it can travel in backward direction too. The similarities of the Big bang singularity and the Black hole singularity. In the chapter time travel I am intend to say that, a time traveler cannot create an incident in past or

future, he can only meet the information. The chapter 2 and 3 are about the Theory of gravitation. There I am trying to explain the range of gravitational field. For that I have found a new constant "A". It was derived from the equations of Sir Isaac Newton, the very famous Albert Einstein and many others. According to my Theory and equations, the gravity of an independent object will be Zero at a certain distance. Newton and Einstein discussed about the gravitational force of attraction between two objects and I am explaining the range of the gravitational field of an individual object. I cannot believe that, if I have a steel ball with a weight of one kilogram in my hand and someone says to me that, it has an infinite range of gravity, it is out of my logic. I believe in physics and my physics is my surroundings. My observations on surroundings are giving me all my answers. Chapter 1 is discussing the dual nature of a particle. If I am telling somewhere, a "Particle is at rest". People say that, it is impossible to observe a particle at rest. I can't believe that, because we can conclude there is a particle at rest in several occasions. While we are projecting an atom, the particle inside the atom is at rest. If we go to a smaller particle like a proton, the quarks inside it will be at rest. When the proton is moving, the quark inside it is moving, but it is an inertial motion. It is like, when we are travelling in a bus, we are also moving with the bus. But we don't have any role in that motion; we are at an inertial motion. Also I asked people in some discussions that, what is the nature of a particle at rest? They told me that is showing particle nature at rest. But, then why they are showing dual nature when they are moving?? Here is the presence of a medium, and the waves are creating in the medium. I believe that it is the same in microscopic world and macroscopic world. Because the laws of the universe are always the same for everything. In the third theory I am explaining about this. We are living in a conscious world where the information can travel faster than light. Everything in our universe is conscious about its state. The light from the sun needs 8.20 minutes to reach earth, but we can see the sun at a blink of our eyes, and that describes the speed of information. We are watching a sun which was 8 minutes before. Here the information leads us to the past. Hope you will enjoy reading my book.

*Isaac Newton on the action at a distance in gravity: With or without God?* Nicolae Sfetcu 2019-02-17 The interpretation of Isaac Newton's texts has sparked controversy to this day. One of the most heated debates relates to the action between two bodies distant from each other (the gravitational attraction), and to what extent Newton involved God in this case. Practically, most of the papers discuss four types of gravitational attractions in the case of remote bodies: direct distance action as intrinsic property of bodies in epicurean sense; direct remote action divinely mediated by God; remote action mediated by a material ether; or remote action mediated by an immaterial ether. The purpose of this paper is to argue that Newton categorically rejected the types of direct action as the intrinsic property of bodies, and remote action mediated by a material ether. Concerning the other two types of action, direct through divine intervention and mediated through an immaterial environment, Newton has repeatedly stated that he does not know the exact cause of gravity, but in both cases, he has directly involved God, directly in the first case and as the primary cause (the environment/ether being the secondary cause) in immaterial mediated action. But since recognition of direct distance action could have given some credit to those who thought gravity could be essential to matter, and hence to atheism, Newton never openly acknowledged the possibility of such an idea. In the real world of today's physics, we have no understanding of what energy is nor do we understand the source of the gravitational force. If there is the tiniest chance that the fictional theories described in this book about energy and gravitation are in fact correct, it would be of incredible importance to our understanding of our world and our universe. The story follows the development of a young physics teacher, Paul, his family and his theories concerning energy, gravitational force and the transmission of light.

*The Mystery of Gravitational Attraction* Juris Bogdanovs 2023-02-17 In short, clearly, this book is about the Gravitational Attraction and Anti-gravity. However, here I am also addressing some topics that are seemingly only vaguely related to it. But they are! One of them is the possibly true essence of Vacuum, which might be completely different from what science thinks about it today. And I will provide suggestion for experiment to test it! Another topic concerns the question about why do planes fly. Turns out, there is one thing that has avoided scientists and hasn't been fully answered yet. Yes, there is a mystery still! And yes, the ideas about Gravitational Attraction and Vacuum (as they are interpreted in this book) will be very important in explaining that problem with all flying objects too! Readers should be aware that despite the fact that we have several ideas explaining (trying to explain) Gravity, they still have multiple and very serious flaws. All of them are addressed in this book along with a new hypothesis that would explain absolutely everything we observe with respect to the phenomenon we all call Gravity. I believe that the right way to address this phenomenon is to call it the Gravitational Attraction. In this book you will find answered all those questions about Gravity current models are failing to. Some of those questions are these: 1) Why is Gravity such a weak force?, 2) Why Gravity only attracts?, 3) Why and how Gravity attracts the non-magnetic objects and substances? The Laws of Nature leading to Gravitational Attraction might be simpler than we currently think about them, and that can be experimentally tested... Ideas for those tests are described in this book.

**Gravitational Attraction of a Floating, Hollow, Rectangular Parallelepiped** Andrew N. Smith 1955

**Neutron Stars, Black Holes, and Gravitational Waves** James J. Kolata 2019-05-09 Albert Einstein's General Theory of Relativity, published in 1915, made a remarkable prediction: gravitational radiation. Just like light (electromagnetic radiation), gravity could travel through space as a wave and affect any objects it encounters by alternately compressing and expanding them. However, there was a problem. The force of gravity is around a trillion, trillion, trillion times weaker than electromagnetism so the calculated compressions and expansions were incredibly small, even for gravity waves resulting from a catastrophic astrophysical event such as a supernova explosion in our own galaxy. Discouraged by this result, physicists and

astronomers didn't even try to detect these tiny, tiny effects for over 50 years. Then, in the late 1960s and early 1970s, two events occurred which started the hunt for gravity waves in earnest. The first was a report of direct detection of gravity waves thousands of times stronger than even the most optimistic calculation. Though ultimately proved wrong, this result started scientists thinking about what instrumentation might be necessary to detect these waves. The second was an actual, though indirect, detection of gravitational radiation due to the effects it had on the period of rotation of two 'neutron stars' orbiting each other. In this case, the observations were in exact accord with predictions from Einstein's theory, which confirmed that a direct search might ultimately be successful. Nevertheless, it took another 40 years of development of successively more sensitive detectors before the first real direct effects were observed in 2015, 100 years after gravitational waves were first predicted. This is the story of that hunt, and the insight it is producing into an array of topics in modern science, from the creation of the chemical elements to insights into the properties of gravity itself.

**Method and Means for Counteracting Gravitational Attraction** Harry Bricker Fuchs 1977

*Gravity - How Gravity Is Created* Peter Roberts 2018 This is the first reasoned, and supported theory ever published explaining how gravity is created. Neither Newton nor Einstein could do this. Whereas relativity is a theory that explains how matter responds to gravity, this book describes how gravity is created and the mechanisms by which gravity exerts its influence on matter from atoms to planets, stars, and galaxies. It also provides, again, for the first time, a mechanism for inertia and momentum and discusses an improved version of Newton's equation. All in simple language that anyone can understand. Written without mathematics for everyone from students to professional astronomers, this book has received many unsolicited five-star rating testimonials, from youngsters to PhD scientists, many of which are reproduced on its second and third pages, including: "Newton was reported to have stated that his work was relevant only because he could stand on the shoulders of past giants. Your work is, of course, a step beyond. [H.G.K.]"
