*Summer Start for A-Level Chemistry* Primrose Kitten 2017-06-11 There is a BIG jump between GCSE and A-Level. Lots of students find this a massive shock and sometimes find themselves sitting in class lost, not following what the teacher is saying or wishing they had chosen a different subject. This book is designed to help you get started on some of the new content and take your GCSE knowledge to a higher level. Because if you managed to get through GCSE not understanding a topic or skipping over some bits you may find you need the extra help. I'm constantly telling you the best way to learn is by practicing questions, so I've made you a book full of practice questions. 135 multiple choice questions to reflect the style of exam questions, 60 equations for you to balance (in 3 different formats), 65 compounds for you to work out the formula for and a lots of things that you need to recall for A-Level. This book is not designed as a text book or revision guide, but as a workbook. There are lots of good (and bad) expensive and free revision guides out there, on my YouTube channel and other great websites. So there is no point in me adding to the masses. Taking some GCSE topics, a bit further and introducing some new topics for A-Level. This is not a complete list of all the GCSE topics that also come up at A-Level; just enough to keep you (Very) busy over the summer and give you an advantage when you start year 12. All the teaching, all the new content, is available for free on my YouTube channel, this book is for you to practice and learn. The best way to approach this is to watch the teaching video, or after class try a section and check the answers. Topics covered are... (you may feel confident in some of these topics, but are you A-Level confident?!?!)

Calculations of Analytical Chemistry Leicester F. Hamilton 2008-11 CALCULATIONS OF ANALYTICAL CHEMISTRY by LEICESTER F. HAMILTON, S. B. and STEPHEN G. SIMPSON. Originally published in 1922.

PREFACE: The title of this book has been changed from Calculations of Quantitative Chemical Analysis to Calculations of Analytical Chemistry because the subject matter has been expanded to cover the stoichiometry of both qualitative and quantitative analysis. In order to include calculations usually covered in courses in qualitative analysis, some rearrangements of material have been made, new sections have been added, and chapters dealing with equilibrium constants and with the more elementary aspects of analytical calculations have been considerably expanded. Altogether, the number of sections has been increased from 78 to 114 and the number of problems from 766 to 1,032. The greater part of the book is still devoted to the calculations of quantitative analysis. Short chapters on conductometric and amperometric titrations and a section on calibration of weights have been added, and many other changes and additions have been made at various points in the text. A section reviewing the use of logarithms has been inserted, and a table of molecular weights covering most of the problems in the book is included in the Appendix. It is felt that every phase of general analytical chemistry is adequately covered by problems, both with and without answers, and that most of the problems require reasoning on the part of the student and are not solved by simple substitution in a formula. **Questions and Answers in Physiological Chemistry With Common Tests, Formulae, Equations, and Past Examination Papers, Founded on the Course in Physiological, Chemistry, Given at the College of Physicians and Surgeons, Columbia University, New York City** Edward Christopher Brenner 2015-07-05 Excerpt from Questions and Answers in Physiological Chemistry With Common Tests, Formulae, Equations, and Past Examination Papers, Founded on the Course in Physiological, Chemistry, Given at the College of Physicians and Surgeons, Columbia University, New York City This little book has been written to aid medical students in obtaining a clear and concise idea of the essentials of physiological chemistry. Special care has been taken to select for treatment such questions as best serve to make clear the fundamental principles. A few sentences have been copied verbatim from standard authors. My reference works were: the notes and lectures of Prof. Gies and Prof. Chittenden, Hammarsten's "Physiological Chemistry," Foster's and Kirke's "Physiology" and Curtman's "Urine Analysis." I owe my sincerest thanks to Dr. Gies, without whose kind encouragement this would not have been attempted. I am also under obligations to Mr. George H. Humphreys for assistance in proof reading, and Dr. Harold M. Hays for many valuable suggestions. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
