**Cognition, Communication, and Romantic Relationships** - James M. Honeycutt 2014-04-08

Cognition, Communication, and Romantic Relationships focuses on the role of memory, communication, and social cognition in the development of romantic relationships. The authors review developmental models of communication and examine criticisms of these models. They also explore the stages through which relationships escalate and deteriorate, and consider the processes for such activities as meeting new people, dating, sexual intercourse, and terminating relationships. Differences between men and women are discussed throughout the text, in light of current research supporting systematic gender differences in how people think about romance and relationships. As an extended analysis and research review of how thinking about romance influences and is influenced by communicative processes, this text offers a deeper understanding of the cognitive and communicative factors involved in relationship processes. It is designed for use in courses on interpersonal relationships and intimate relations in social psychology, communication, counseling psychology, clinical psychology, and sociology.

[Maintaining Relationships Through Communication](#) - Daniel J. Canary 2003-01-30

Relational maintenance provides a rallying point for those seeking to discover the behaviors that individuals utilize to sustain their personal relationships. Theoretical models, research programs, and specific studies have examined how people in a variety of close relationships choose to define and maintain those relationships. In addition, relational maintenance turns our attention to communicative processes that help people sustain their close relationships. In this collection, editors Daniel J. Canary and Marianne Dainton focus on the communicative processes critical to the maintenance and enhancement of personal relationships. The volume considers variations in maintaining different types of personal relationships; structural constraints on relationship maintenance; and cultural variations in relational maintenance. Contributions to the volume cover a broad range of relational types, including romantic relationships, family relationships, long-distance relationships, workplace relationships, and Gay and Lesbian relationships, among others. [Maintaining Relationships Through Communication: Relational, Contextual, and Cultural Variations](#) synthesizes current research in relationship maintenance, emphasizes the ways that behaviors vary in their maintenance functions across relational contexts, discusses alternative explanations for maintaining relationships, and presents avenues for future research. As such, it is intended for students and scholars studying interpersonal communication and personal relationships.

*Communication in Interpersonal Relationships* - Donald P. Cushman 1985-06-30

This book discusses communication principles, processes, and skills from four different perspectives by explaining four related propositions. First, human communication is guided by socially established rules, the knowledge of which allows interacting persons to exert influence over the outcome of their interactions. Second, self concepts are formed and sustained in our interactions with others. Third, the formation of

sustained interpersonal relations depends upon the attraction resulting from reciprocal self concept support. And fourth, organizations and the cultural system provide the parameters within which self concepts and interpersonal relations are formed. The implications of these propositions are examined in chapters two through ten. The authors develop their system in terms of results. What patterns of communication—what patterns of signal exchange—increase the probability of the development of affective relationship? What patterns erode interpersonal systems or prevent them from forming? The book also examines patterns of communication within task-oriented organizations and in situations involving cultural differences.

**Communication, Relationships and Care** - Sheila Barrett 2004-03-01

Communication and relationships have become an increasing focus of attention in debates about the future of health and social care. People working in care services are being encouraged to improve communication processes, to develop more participatory relationships with service users, and to work more closely in partnership with other professionals. This Reader provides a comprehensive collection of literature that aims to enable those involved in care services, as workers, carers or service users, to reflect on their everyday interactions and to situate them in wider contexts. Relational Communication - Julia T. Wood 1995

Focusing on personal, intimate relationships, this text offers a sophisticated integration of current theory and research, that is interdisciplinary in scope, to help students see how important theories about communication and relationships pertain to everyday experiences. Part One of the book provides a conceptual framework for thinking about personal relationships; chapters focus on theories and research that illuminate what personal relationships involve and how they develop through communication processes. *The Mate Relationship* - Anne Maydan Nicotera 1997-01-01

This book presents research applications of a rules theory of mate relationships of several American cultures and two non-American cultures. The theory is summarized in seven basic propositions, several of which have been previously tested and supported. The research contained here expands the depth of the work by examining attributes and levels of mateship in several American co-cultures, one Caribbean culture, and one Asian culture, and extends the breadth of the work by moving into the areas of relational quality, maintenance, and conflict. Seven propositions presented are 1) perceived self-concept support is the basis of interpersonal attraction; 2) different types of perceived self-concept support are the basis for different types of interpersonal relationships; 3) different types of self-concept support are the basis for entry into and increasing intensity of interpersonal relationships; 4) the type and form of self-concept support is homogeneous by culture; 5) conflict which threatens self-concept support on crucial relationship variables--the lack of it or attacks on it--is the most potentially dangerous type of conflict in interpersonal relationships; 6) negotiation of differences in perceptions of self-concept support on crucial relationship variables cements interpersonal relationships; and 7) quality interpersonal relationships consist of intimacy, personal growth, and effective communication on the crucial relationship variables.

**Communication in Social Work** - Peter R. Day 2014-05-17

Communication in Social Work focuses on the role of communication in social work. This book discusses aspects of communication in the helping process and illustrates where information and advice on their own would not have been helpful to the client. Comprised of seven chapters, this book begins with an overview of the nature of communication and explains why a study of the communication process may help in dealing with serious problems of the environment and human relations. Attention then turns to communication processes in social work, with emphasis on the role of non-verbal behavior in the interaction between social worker and client, along with the factors that influence communication between them. The chapters that follow focus on social factors in communication, considering the sociological view of social work as a mechanism of social control, as well as the importance of communication in the helping process. This book concludes by explaining how social agency contributes to the nature of the social worker's activities, touching on topics such as problems of cooperation and coordination in social welfare. This text will be of interest to professionals and policymakers involved in social work.

**Change Processes in Relationships** - Alan Fogel 2006-05-25

Just as each person develops from infancy to adulthood, all interpersonal relationships have a life history that encompasses the changes in how people communicate with each other. This book is about how a relationship transforms itself from one pattern of communication to another. The authors present a unique research method called 'relational-historical research', based on advances in dynamic systems theory in developmental psychology, and qualitative methods in life history research. It rests on three premises: that the developing

relationship (not the individual) is the unit of analysis; that change emerges from, but is not entirely constrained by, the patterns of the past; and that the developmental process is best revealed by making frequent observations within a particular case before, during, and after a key developmental transition. Looking specifically at the mother-infant relationship, this is a compelling piece of research that will appeal to an international audience of intellectuals and practitioners.
