Lucy's Legacy Dr. Donald Johanson 2009-03-03 "Lucy is a 3.2-million-year-old skeleton who has become the spokeswoman for human evolution. She is perhaps the best known and most studied fossil hominid of the twentieth century, the benchmark by which other discoveries of human ancestors are judged." -From Lucy's Legacy In his New York Times bestseller, *Lucy: The Beginnings of Humankind*, renowned paleoanthropologist Donald Johanson told the incredible story of his discovery of a partial female skeleton that revolutionized the study of human origins. Lucy literally changed our understanding of our world and who we come from. Since that dramatic find in 1974, there has been heated debate and -most important- more groundbreaking discoveries that have further transformed our understanding of when and how humans evolved. In *Lucy's Legacy*, Johanson takes readers on a fascinating tour of the last three decades of study - the most exciting period of paleoanthropologic investigation thus far. In that time, Johanson and his colleagues have uncovered a total of 363 specimens of *Australopithecus afarensis* (Lucy's species, a transitional creature between apes and humans), spanning 400,000 years. As a result, we now have a unique fossil record of one branch of our family tree - that family being humanity - a tree that is believed to date back a staggering 7 million years. Focusing on dramatic new fossil finds and breakthrough advances in DNA research, Johanson provides the latest answers that post-Lucy paleoanthropologists are finding to questions such as: How did *Homo sapiens* evolve? When and where did our species originate? What separates hominids from the apes? What was the nature of Neandertal and modern human encounters? What mysteries about human evolution remain to be solved? Donald Johanson is a passionate guide on an extraordinary journey from the ancient landscape of Hadar, Ethiopia - where Lucy was unearthed and where many other exciting fossil discoveries have since been made - to a seaside cave in South Africa that once sheltered early

members of our own species, and many other significant sites. Thirty-five years after Lucy, Johanson continues to enthusiastically probe the origins of our species and what it means to be human.

The Great Creation Debate Brad Freckleton 2012-07 Why isn't the evolution of flight shown in the fossil record? Bugs, birds, bats and dinosaurs flew and are shown fully formed in the fossil record, but there are no animals with halfway wings in the fossil record leading from ground based animals to flying animals. What is desperately wrong with the Grand Canyon if evolution is true? Where are the massive signs of erosion between the sedimentary layers of the Grand Canyon if they were laid down a "million years" at a time? Why does massive erosion only show up at the top? Animals with well-developed eyes show up suddenly in the fossil record as do flying animals. It's the norm for plants and animals to show up in the fossil record with the same separations as we see in different types of living animals and plants today. The "second law of thermodynamics" is a law of science that says everything left to its own will wear out, run down. It is a fundamental law of science. So how did evolution accidentally go up? How could a DNA molecule fumble together? The cell needs DNA; DNA needs the cell ñ which came first? 'Beneficial' mutations also weaken in other areas, and don't write evolutionary advancing DNA code. Spiral galaxies (which have the shape of a star fish that is spinning quickly) throughout our universe, like our Milky Way galaxy, are supposed to be over 10 billion years old. If they were over a billion years old they would lose their spiral arm shape. The arms of our galaxy, the Milky Way, only show a maximum age of 0.3 billion years. People want to know why they're here now and where they're going to go. They want surety of truth also. Read this book and see how well evolution holds up in all the sciences. Read this book and see if life can have meaning, direction and hope ñ with surety. For those who claim to be open minded, put on your seatbelts and keep your arms inside as you ride the roller coaster of your own value systems!

The Conflict of the Ages Teacher Edition I The Scientific History of Origins Michael J. Findley Teacher Edition includes complete student text, review questions, vocabulary, and answer keys. The Conflict of the Ages is a Multi-Part exploration of History, Science and ancient Literature. This first installment covers the concepts of God, time, Creation, physics, cosmology, and specifics about each day of Creation. We make comparisons with ancient sources to see where they agree with the Scriptural account. We reference classic and modern scientific views, exposing errors, preconceptions, presuppositions and falsehoods taught as fact by the mainstream scientific community. God is the first witness and the Bible the first eyewitness account of beginnings and origins. Other ancient documents contain at least some truths and parallel accounts.

The Conflict of the Ages Teacher III They Deliberately Forgot: The Flood and the Ice Age Michael J. Findley Includes full student text, review questions, vocabulary, and answer keys. The worldwide Flood is one of the most discounted records in the Scriptures. Yet it is supported around the world by historical accounts. Take a look at feasibility studies on the safety and the stocking of the Ark. The Geologic Column ought to prove that fossils reveal the age of the earth. They show progression from simple to complex organisms over millions of years. But do they? Take a look at "living fossils." Meet the extinct creature found only in the "oldest" layers but more complex than "later" life forms. Consider the real conditions that surrounded the Flood and the Ice Age.

Enigmatic Microorganisms and Life in Extreme Environments Joseph Seckbach 2013-12-01 Modern methods and approaches, such as the analysis of molecular sequences to infer evolutionary relationships among organisms, have provided vast new sets of data to further our understanding of living organisms, but there remain enigmas in the biological world that will keep scientists working and thinking for decades. Microorganisms by virtue of their small size and almost unbounded diversity provide ample examples of intriguing mysteries that are being challenged with all of the techniques the modern scientific arsenal can provide. One whole arena of this battle to resolve puzzling mysteries about various microorganisms is the almost unbelievable ability of many micro-organisms to live in extreme environments. Whether the challenge is extreme heat, cold, pressure, hyper salinity, alkalinity or acidity, some micro-organisms live now where no life might seem possible. This fascinating state of affairs is the context for this present volume edited by Joseph Seckbach. This Volume is a compilation of many of the especially interesting questions and biological challenges that arise in the consideration of microorganisms in general and the extremophiles in particular.

What Does it Mean to be Human? Life, Death, Personhood and the Transhumanist Movement D. John Doyle 2018-09-01 This book is a critical examination of the philosophical and moral issues in relation to human enhancement and the various related medical developments that are now rapidly moving from the laboratory into the clinical realm. In the book, the author critically examines technologies such as genetic engineering, neural implants, pharmacologic enhancement, and cryonic suspension from transhumanist and bioconservative positions, focusing primarily on moral issues and what it means to be a human in a setting where technological interventions sometimes impact strongly on our humanity. The author also introduces the notion that death is a process rather than an event, as well as identifies philosophical and clinical limitations in the contemporary determination of brain death as a precursor to organ procurement for transplantation. The discussion on what exactly it means to be dead is later applied to explore philosophical and clinical issues germane to the cryonics movement. Written by a physician/ scientist and heavily referenced to the peer-reviewed medical and scientific literature, the book is aimed at advanced students and academics but should be readable by any intelligent reader willing to carry out some side-reading. No prior knowledge of moral philosophy is assumed, as the various key approaches to moral philosophy are outlined early in the book.

Evolutionary Transitions to Multicellular Life Iñaki Ruiz-Trillo 2015-03-27 The book integrates our understanding of the factors and processes underlying the evolution of multicellularity by providing several complementary perspectives (both theoretical and experimental) and using examples from various lineages in which multicellularity evolved. Recent years marked an increased interest in understanding how and why these transitions occurred, and data from various fields are providing new insights into the forces driving the several independent transitions to multicellular life as well as into the genetic and molecular basis for the evolution of this phenotype. The ultimate goal of this book is to facilitate the identification of general and unifying principles and mechanisms.

Creation, Evolution & Science Selva Sugunendran 2016-05-31 In this book you will learn about the origins of life, which has been a popular topic of debate for decades, stirring division among groups of people regarding what to believe, whether a higher entity created life (Creation) or a series of cosmic accidents (evolution) led to life developing on earth. I have spent nearly eighteen months researching in order to find the seemingly elusive answers to the questions involving our very origins: Where do we come from? Who or what made us a supreme being, some cosmic event, or both? What should we believe in Creation or evolution? Does it matter what we choose to believe? I have selected thirty most often asked questions on this subject matter and have attempted to answer them by looking at both sides of the argument on creation and evolution fairly and scientifically and without taking sides.

Physical Geology Steven Earle 2016-08-12 This is a discount Black and white version. Some images may be unclear, please see BCCampus website for the digital version. This book was born out of a 2014 meeting of earth science educators representing most of the universities and colleges in British Columbia, and nurtured by a widely shared frustration that many students are not thriving in courses because textbooks have become too expensive for them to buy. But the real inspiration comes from a fascination for the spectacular geology of western Canada and the many decades that the author spent exploring this region along with colleagues, students, family, and friends. My goal has been to provide an accessible and comprehensive guide to the important topics of geology, richly illustrated with examples from western Canada. Although this text is intended to complement a typical first-year course in physical geology, its contents could be applied to numerous other related courses.

Introduction to Paleobiology and the Fossil Record Michael J. Benton 2020-06-02 This book presents a comprehensive overview of the science of the history of life. Paleobiologists bring many analytical tools to bear in interpreting the fossil record and the book introduces the latest techniques, from multivariate investigations of biogeography and biostratigraphy to engineering analysis of dinosaur skulls, and from homeobox genes to cladistics. All the well-known fossil groups are included, including microfossils and invertebrates, but an important feature is the thorough coverage of plants, vertebrates and trace fossils together with discussion of the origins of both life and the metazoans. All key related subjects are introduced, such as systematics, ecology, evolution and development, stratigraphy and their roles in understanding where life came from and how it evolved and diversified. Unique features of the book are the numerous case studies from current research that lead students to the primary literature, analytical and mathematical explanations and tools, together with associated problem sets and practical schedules for instructors and students. New to this edition The text and figures have been updated throughout to reflect current opinion on all aspects New case studies illustrate the chapters, drawn from a broad distribution internationally Chapters on Macroevolution, Form and Function, Mass extinctions, Origin of Life, and Origin of Metazoans have been entirely rewritten to reflect substantial advances in these topics There is a new focus on careers in paleobiology

subject. The book begins with an overview of the cyanobacteria - or blue-green algae, for those who are not specialists - then looks at their diversity in the geological record and goes on to describe their ecology in present environments where they play important roles. Why is one of the key groups of organisms in the Precambrian still one of the most important groups of phototrophs today? The importance of ecological information for rational management and exploitation of these organisms for commercial and other practical purposes is also assessed. Accounts are provided of nuisances as well as the ecology of the commercially successful *Spirulina* and the role of cyanobacteria in ecosystem recovery from oil pollution. Many chapters include aspects of physiology, biochemistry, geochemistry and molecular biology where these help general understanding of the subject. In addition there are three chapters dealing specifically with molecular ecology. Thirty-two pages of colour photos incorporate about seventy views and light micrographs. These features make the book valuable to a wide readership, including biologists, microbiologists, geologists, water managers and environmental consultants. The book complements the highly successful *The Molecular Biology of Cyanobacteria* already published by Kluwer.

25 Creationists' Arguments & 25 Evolutionists' Answers Michael Shermer 1994

Dinosaurs and Creation Donald B. DeYoung 2000-08-01 Children, adults, and scientists alike are fascinated by dinosaurs. However, nearly all discussions of dinosaurs in museums and textbooks assume a distant evolutionary beginning to the earth. How can Christians reconcile apparent scientific consensus with the biblical creation story? Donald DeYoung demonstrates that evolution is not the only explanation for the existence and death of dinosaurs. He uses a question-and-answer format, supplemented by tables and figures, to offer the creationist explanation. The fifty questions include: - What was the diet of dinosaurs? - What happened to dinosaurs in the creation view? - Did dinosaurs evolve into birds? Appropriate for more advanced students, this book is a useful reference for home school and Sunday school teachers, parents, and anyone interested in dinosaurs.
