Database Management System - Anupama Chowdhary
2018-07-20

Managing data is an important managerial task in any organisation. Accurate and relevant data is the source of valuable information. Sound management decisions can be made by managing data efficiently. For managing data effectively the traditional file environment is not appropriate choice so database management systems are used. A database management system (DBMS) is a computer software application that interacts with the user, other applications, and the database itself to capture and analyse data. This book provides plenty of examples and pictorial diagrams to explain the concepts of DBMS in simplified method. Some key topics covered are: Data and information, Components of DBMS, Database

Cases in Management Information Systems - SANJAY MOHAPATRA 2008-01-01
This book is intended as a supplement for courses in Management Information Systems (MIS). It uses cases to explain MIS concepts. It illustrates how computer-based information systems can be used to support an organization's objectives and strategic plans. The book's objective is to capture the material from a wide range of sectors such as health care, developmental activities, bank operations, microfinance, etc. and organize it around a framework that would be useful for students to

Entity Relationship Diagram For Employee Management System

understand how MIS can help in overcoming corporate challenges. It prepares students as managers, providing a clear focus on information, rather than data, and its use in business. These cases can also be used by practitioners as examples for designing MIS in their own organizations. For each case, the costs and benefits of the information system have been evaluated by calculating the Return on Investment (ROI). What is more, not only quantitative benefits, but also qualitative benefits (social and public benefits) have been identified to justify the need for technology-enabled MIS for supporting corporate strategies and operations. The book would be useful to students of MBA, BE (ICT), MCA and M.Sc. (Computer Science) courses. Besides, it would be of benefit to senior executives participating in Management Development Programmes.

Recent Developments in Decision Support Systems -
Clyde W. Holsapple 2013-06-29

Over the past two decades,

many advances have been made in the decision support system (DSS) field. They range from progress in fundamental concepts, to improved techniques and methods, to widespread use of commercial software for DSS development. Still, the depth and breadth of the DSS field continues to grow, fueled by the need to better support decision making in a world that is increasingly complex in terms of volume, diversity, and interconnectedness of the knowledge on which decisions can be based. This continuing growth is facilitated by increasing computer power and decreasing per-unit computing costs. But, it is spearheaded by the multifaceted efforts of DSS researchers. The collective work of these researchers runs from the speculative to the normative to the descriptive. It includes analysis of what the field needs, designs of means for meeting recognized needs, and implementations for study. It encompasses theoretical, empirical, and applied orientations. It is concerned

Entity Relationship Diagram For Employee Management System

with the invention of concepts, frameworks, models, and languages for giving varied, helpful perspectives. It involves the discovery of principles, methods, and techniques for expeditious construction of successful DSSs. It aims to create computer-based tools that facilitate DSS development. It assesses DSS efficacy by observing systems, their developers, and their users. This growing body of research continues to be fleshed out and take shape on a strong, but still-developing, skeletal foundation.

Database Management System - Jagdish Chandra Patni 2022-01-31

A database management system (DBMS) is a collection of programs that enable users to create and maintain a database; it also consists of a collection of interrelated data and a set of programs to access that data. Hence, a DBMS is a general-purpose software system that facilitates the processes of defining, constructing, and manipulating databases for various applications. The primary goal of a DBMS is to provide an environment that is both
