CBD Oil for Infertility: You on Stop Alternative Remedy for Fertility Issues - Michel Pollann MD 2019-02-15

Not everyone has the goal of becoming a parent, but for those who do, being unable to conceive a child is an exquisitely painful reality. Many of us spend a portion of our lives attempting to avoid unplanned pregnancies, and assume that once we are ready to conceive, it will happen with little difficulty. We tend to think that shifting gears from preventing pregnancy to planning conception and childbirth will proceed in a relatively smooth and orderly fashion. A failure to conceive, then, is a major life stressor, which can wreak havoc on otherwise well-adjusted couples. Even in today's society, we tend to assume that individuals in committed relationships have the goal of procreation. Women are often identified with their ability to give birth. Both men and women are supposed to pass on their genetic and generational legacies. Failure by either party to "fulfill their end of the bargain" can be devastating, humiliating, and emotionally destructive. The continuing taboo against discussing the subject of infertility compounds these reactions. Even though tremendous strides have been made in treating this relatively common condition, infertility is typically not openly discussed. The current article is designed to break through some of those taboos and provide you with information, treatment options, and resources to guide you through this painful time. Infertility medicine is a rapidly advancing science, so be sure to check this topic center periodically for new research and treatment updates. Infertility is typically defined as the inability to become pregnant after one year of sexual intercourse without contraception. For women over age 35, this condition is diagnosed after 6 months of an inability to conceive. Using this threshold, there will be women, albeit a minority, who meet the criteria for "infertility" but who go on to conceive without medical intervention. However, this definition is used to ensure that people who are experiencing problems that can be remedied will seek timely medical intervention. Having trouble conceiving is more common than you might think. Despite what we were taught in our sex education classes in school (if any such class was offered), in any given month a typical couple has a 20% chance of conceiving. In a lifetime, 10-15% of couples will experience infertility. This number jumps to 33% in couples with a woman is over 35 years of age. In about 45% of cases there is a male-origin for the infertility, female-origin infertility accounts for 30% of cases, and 20% of the time

both partners are the source of difficulties. If you are a woman of reproductive age, younger than 35, and have been trying for more than a year - it may be time to see an infertility specialist. If however, you are over 35, and have been trying for more than six months, it may be time to go ahead and book an appointment. Women who are 35 or older and having a hard time getting pregnant need to seek help sooner, because fertility is age discriminant. As Your Fertility says, "At 30, the chance of conceiving each month is about 20%. At 40 it is around 5%." This continues to decline as you continue to age. The older you get, the higher the likelihood for complications for both mom and baby as well. Moms 35 and older face higher risks of birth complications and the need for caesarean section. Babies face higher chances of birth defects, and genetic abnormalities. This book is highly resourceful in using CBD Oil to solve infertility issues.

Stay Fertile Longer - Mary Kittel 2003-08-16

For a mother, "Mother Nature" seems like a real prankster. Over the last century, life expectancy for women has increased by 30 years. And many of us are using that extra time to attain advanced degrees, establish ourselves in our careers, start up businesses, even run for political office. Yet while we've put marriage and family on hold to pursue other dreams, we are also steadily losing eggs-- and with each lost egg goes an opportunity to have a baby. Sounds grim? It doesn't have to. The truth is, by working with Mother Nature, instead of against her, there are scores of things you can do-- starting today-- to preserve and protect your fertility. It's a proven fact: Healthy women are fertile women. And within these pages, you'll find a comprehensive program to boost your health and optimize your fertility. Based on the best, most current advice from the top fertility experts in both conventional and alternative medicine, *Stay Fertile Longer* gives you all the information you need, whether you're ready to start a family today, 5 years from now, or even in the next decade! Best of all, you'll increase your odds for conceiving quickly and easily-- and without the need for expensive high-tech treatments such as in vitro fertilization. If you're ready to start a family today, simply follow

the get-pregnant-now plan in part 3. There's a frank discussion of the subtleties of lovemaking to increase conception odds, a detailed program for understanding your cycle and charting your peak fertile days each month, and even a primer on the prenatal tests you'll want to get at your next doctor visit. What if you and your partner have tried to get pregnant for 6 months or more without success? *Stay Fertile Longer* has an array of natural options for overcoming fertility obstacles such as hormone imbalances or a compromised reproductive system. You'll be introduced to healing methods including massage, yoga, and herbal remedies. And in the event that you do need to resort to high-tech options, these natural remedies will complement fertility medications and assisted reproduction techniques, boosting your odds for success. Whether you want to become a mother today or "someday," this book is for you.
