Hidden Agender - Gerard

Casey 2021-04-19

In *Hidden Agender*, Gerard Casey develops a timely and provocative defence of free speech and toleration against the transgenderist ideology that has infiltrated so much of the media, the political establishment and the law. Opposing ideas, not individuals, *Hidden Agender* provides a compelling critique of the transgender ideologists and trans activists, and the new reactionary form of legal intolerance of our right to free thought and free speech. As a libertarian, Casey believes that we should be free to say and do whatever we wish provided that, in so doing, we do not perpetrate violence, or threaten to perpetrate violence, against the person or property of another. The fundamental objection is rather to individuals being forced, on

pain of legal or social sanctions, to believe (or to pretend to believe) what to them is patently false, namely, that a man can become a woman or a woman a man, and to be legally obliged to treat those who claim to have transitioned from one sex to another as if they really had managed to do so. Drawing on extensive research, both scientific and anecdotal, *Hidden Agender* is a robust defence of free speech and tolerance against the combined forces of prejudice, wokeness and legal intimidation.

The Trans Partner

Handbook - Jo Green

2017-08-21

Individuals who transition from one gender to another are often in some degree of a relationship, and over 55% of these relationships endure through the transition process. While more resources are

emerging for trans people themselves, there is very little information available for their partners. Through first-hand accounts and vignettes of successful partnerships, this book presents detailed descriptions of everything involved in the transition process, with specific guidance for those supporting a partner in transition. Topics include disclosure, mental health, coming out, loss and grief, sex and sexuality and the legal, medical and social practicalities of transitioning. In this essential guide, people whose partners are across the transgender spectrum speak out on their own experiences with personal advice and support for others.

Transition Denied - Jane Fae
2018-05-21

Trans people in the UK currently face widespread prejudice and discrimination, from how they are described in the media to the lack of healthcare support they receive. This institutional bias is illustrated by the tragic case of Synestra de Courcy, who

died following neglect and rejection from the NHS, leading her to sex work to fund her transition and dangerous self-medication. Charting Syn's life from childhood through to her untimely death aged just 23, Jane Fae exposes the gross institutional and societal discrimination trans people experience on a daily basis and its impact on the lives of trans people young and old.

Promoting honest discussion and bringing these hidden issues into the light of day, this book is a must read for anyone interested in trans rights, and NHS accountability.

Sexuality and Gender for Mental Health Professionals

- Christina Richards
2013-10-15

Questions of sexuality and gender affect everyone and therefore have an inevitable relevance in the consulting room. Yet with interpretations and manifestations of both varying greatly from person to person, understanding the inherent complexities of sexuality and gender can be a daunting task for the health

professional. Breaking down these complexities this practical guide familiarises the reader with all of the common and many of the less common sexualities, genders and relationship forms, and explains experiences and issues relating to each. The book contains: -Explanations of various forms of sexuality, gender and relationship structures -Common concerns relating to specific groups -Key practises relating to specific groups -The treatment of specific groups in contemporary Western society -Details of some rules and ideals that are commonly found within specific groups - Suggestions for professional practice with these groups Ideal for all members of the multidisciplinary team, this accessible book is relevant to practitioners across theoretical backgrounds. Whether you are a trainee or qualified psychotherapist, counsellor, nurse, medic, psychiatrist, social worker or applied psychologist, this is a vital text for your professional practice.

CHRISTINA RICHARDS is Senior Specialist Psychology Associate at the West London Mental Health NHS Trust (Charing Cross) Gender Identity Clinic. MEG BARKER is a senior lecturer in psychology at the Open University and a sex and relationship therapist. *Textbook of Clinical Embryology* - Kevin Coward 2013-10-31

The success of Assisted Reproductive Technology is critically dependent upon the use of well optimized protocols, based upon sound scientific reasoning, empirical observations and evidence of clinical efficacy. Recently, the treatment of infertility has experienced a revolution, with the routine adoption of increasingly specialized molecular biological techniques and advanced methods for the manipulation of gametes and embryos. This textbook - inspired by the postgraduate degree program at the University of Oxford - guides students through the multidisciplinary syllabus

essential to ART laboratory practice, from basic culture techniques and micromanipulation to laboratory management and quality assurance, and from endocrinology to molecular biology and research methods. Written for all levels of IVF practitioners, reproductive biologists and technologists involved in human reproductive science, it can be used as a reference manual for all IVF labs and as a textbook by undergraduates, advanced students, scientists and professionals involved in gamete, embryo or stem cell biology.

Children and Gender - Simona Giordano 2023-05-23

Simona Giordano investigates the moral concerns raised by current clinical options available for transgender and gender diverse children and adolescents. From the time young children express gender incongruent preferences and attitudes, up to the time in which older adolescents might apply for medical or surgical treatment, moral questions are

likely to be asked: should children be enabled to express themselves freely inside and outside the domestic environment? What are the implications of the choices that parents might make early on? How should clinicians respond to distress around sexual anatomy? Is it ethical to suspend pubertal development? What level of evidence should we seek for medications to be used in paediatric care? What are the risks and benefits of various forms of hormonal treatment? Is it ethical to defer surgical interventions till adulthood? Giordano provides a detailed ethical analysis of these and many other questions that are likely to arise at various stages of a person's life and proposes a moral formula to answer these questions, as well as others, that are likely to arise in a fast-changing landscape. Children and Gender combines a detailed ethical analysis with an accurate clinical description of gender development and available clinical pathways.

Gender Dysphoria - Susan

Evans 2021-05-20

In recent years, there has been an explosion in the number of children and young people who diagnose themselves as gender dysphoric, or trans. In the UK, and worldwide, there is a growing tendency to refer them on to 'specialist' gender services almost as soon as they express any confusion or distress about their biological sex or gender identity. Due to the rapidly rising numbers and various pressures on the system, patients are increasingly likely to be offered life-altering medication and/or surgical treatments, often with little exploration of their emotional world. As so little is yet known or understood regarding this increase in gender incongruent patients, it seems precipitous to proceed onto physical treatments before any assessment work is undertaken. Many who present as gender dysphoric have complex needs with comorbid problems such as autism, histories of abuse or trauma, social phobias, depression, eating disorders, and other

mental health symptoms. Therefore, all aspects of the individual's life deserve thorough assessment and therapeutic work. This book is aimed primarily at clinicians working in the field to provide a model for understanding, assessing, and treating gender dysphoria. The model uses a psychoanalytic framework to help explain disturbed states of mind and how psychic defences can be enlisted unconsciously to avoid overwhelming psychic pain. This offers professionals a way of trying to think with, and offer understanding to, their trans-identifying clients. Clinical examples are given to illustrate these processes and promote the understanding of transgender children, adolescents, and young people and their internal worlds, their thinking, and their interpersonal relationships. As well as clinical exploration and understanding, the book includes an overview of the current political, social, and clinical environments which have all impacted on the clinical care of trans-

identifying individuals. As well as professional and trainee clinicians, this book might also prove useful to parents, other professionals, and possibly the gender dysphoric person too.

Cracking the Menopause - Mariella Frostrup 2021-09-16

'Essential reading for everyone' - Marian Keyes

It's high time we renovated and elevated this life change. Despite the centuries of speculation and propaganda, we are not overheating or inherently cold, we are not hysterics or boiling vats of toxic poisons, we are not dried up or washed up, we are simply menopausal. It's time for us to start talking about the menopause. *Cracking the Menopause*, from straight-talking broadcaster Mariella Frostrup and health journalist Alice Smellie, has all the information you need, delivered with characteristic wry humour. Mariella shares her own journey through the menopause, along with the latest science, advice from leading experts and humorous illustrations - to provide an informative source of wisdom

and enlightenment. Featuring case studies from women in every walk of life and all stages of their menopause journey, *Cracking the Menopause* opens up the conversation about an urgent topic that half the population will experience, but barely anyone is talking about. Designed to equip you with the knowledge to manage your symptoms from perimenopause onwards, this essential book separates the myths from the reality and offers expertise, hope and advice. 'I inhaled this book, it's fantastic. Women of all ages need to read it.' - Claudia Winkleman

'Mariella and Alice have just written one of the most important books of the year, bravo.' - Gabby Logan

Trans and non-binary gender healthcare for psychiatrists, psychologists, and other health professionals - Christina Richards 2020-08-27

Transgender Medicine - Leonid Poretsky 2019-02-22

Although transgender persons

have been present in various societies throughout human history, it is only during the last several years that they have become widely acknowledged in our society and their right to quality medical care has been established. In the United States, endocrinologists have been providing hormonal therapy for transgender individuals for decades; however, until recently, there has been only limited literature on this subject, and non-endocrine aspects of medical care for transgender individuals have not been well addressed in the endocrine literature. The goal of this volume is not only to address the latest in hormonal therapy for transgender individuals (including pediatric and geriatric age groups), but also to familiarize the reader with other aspects of transgender care, including primary and surgical care, fertility preservation, and the management of HIV infection. In addition to medical issues, psychological, social, ethical

and legal issues pertinent to transgender individuals add to the complexities of successful treatment of these patients. A final chapter includes extensive additional resources for both transgender patients and providers. Thus, an endocrinologist providing care to a transgender person will be able to use this single resource to address most of the patient's needs. While Transgender Medicine is intended primarily for endocrinologists, this book will be also useful to primary care physicians, surgeons providing gender-confirming procedures, mental health professionals participating in the care of transgender persons, and medical residents and students.

Transgender Health -

Benjamin Vincent 2018-06-21

The number of people coming out as transgender continues to rise, and this book shows healthcare and medical practitioners how to deliver excellent primary and secondary care to gender diverse patients. This guide provides accessible and practical advice on tailoring the social and ethical aspects of practice to the needs of each individual. Beyond setting out how clinical procedures should work for gender reassignment, it explains how to use language and pronouns in a respectful way, provides information on transgender services and resources, and offers insights into the challenges commonly faced by transgender people in both medical and social contexts. Based on cutting edge research and the lived experience of the author as a non-binary person, this is essential reading for all those working to meet the needs of transgender people in healthcare settings.

Everything You Need to Know

About the Menopause (but were too afraid to ask) - Kate Muir 2022-01-20

An eye-opening, no-holds-barred guide to the perimenopause and menopause written by campaigner, journalist and documentary-maker Kate Muir. *Everything You Need to Know About the Menopause (and were too afraid to ask)* is the thinking woman's guide to the menopause, bringing you answers to all those questions that have been hidden behind a veneer of misplaced shame, bad science and centuries of patriarchy. · What's the perimenopause and when will it strike? (It's sooner than you think) · What's happening to my body - and my mind? · Why can't I stop thinking about sex in perimenopause? · How do I get my sex drive back after menopause? · How do I look after my body and brain when my hormones disappear? Muir draws on interviews with the leading medical experts in the field, interlaced with her own tumultuous journey through the menopause and the

personal stories of women from all walks of life, sharing their varied experiences and hard-earned wisdom. Muir also questions why the current medical establishment is getting the menopause so wrong, as she debunks the myths that surround hormone replacement therapy and exposes the sloppy science and hysterical headlines that have had a negative impact on women's health for the last twenty years. It's essential that we understand the biology of our own bodies during this critical period that will define the latter half of our lives. With the help of a panel of doctors, scientists and health experts, Muir unpacks the science behind hormones and ageing, and takes a close look at the different options available for treating both body and mind during the profound changes that take us into midlife and beyond. What she discovers is that both symptoms and treatment are far more extensive and diverse than we might expect. The menopause is the whole package, and the

treatment needs to be too, with impacts as wide ranging as preventing Alzheimer's, boosting sex drive and protecting mental health. This ground-breaking guide is a social, cultural and scientific exploration into a criminally overlooked and under-discussed phenomenon that will affect one billion of us by 2025. And it is a manifesto for change, calling for equality in healthcare and an entirely new approach to women's health.

backgrounds who are dedicated to supporting the integration of refugee doctors into the National Health Service workforce. It is timely and informative for all those working with refugee doctors in the NHS and a useful handbook for refugee doctors themselves. It will help all refugee doctors use their qualifications and expertise in the UK and maximise their contribution to the NHS workforce. All members of workforce development confederations strategic health authorities NHS trusts and primary care organisations and refugee doctors wishing to work in the NHS in the UK will find this book invaluable reading. 'This book gives a very full account of many aspects of a complex situation. It details the history of refugee doctors and the range of problems that they face and also shows the contribution that they can make and the personal courage and resilience it takes to survive the transition. It outlines practical steps from improving English to

preparation for examinations they must pass and preparing for job interviews in a competitive market.' Dame Lesley Southgate President Royal Free and University College Medical School London and Past President Royal College of General Practitioners

Testosterone - Susan Nieschlag 2012-12-06
New developments in testosterone therapy are summarized here by internationally renowned experts. They review both basic and clinical knowledge in fourteen chapters. The book begins with the biochemistry of testosterone, its biosynthesis, metabolism and mechanisms of action in target organs. Three chapters deal with specific aspects of testosterone action, namely its role in spermatogenesis, its psychotropic effects and its effects on bones. Syndromes caused by androgen resistance are described in order to highlight the importance of

properly functioning enzymes and receptors in the target organs. Causes and symptoms of male hypogonadism, the major indication for testosterone treatment, are described. Five chapters are devoted to the pharmacology, pharmacokinetics and clinical uses and abuses of testosterone preparations. The new transdermal testosterone application is described in detail. Side effects of testosterone treatment are reviewed. The possible role of androgens in the development of prostatic hypertrophy and carcinoma is discussed extensively since this question is of major concern to the clinician.

Time to Think - Hannah Barnes 2023-02-23
 SHORTLISTED FOR THE ORWELL PRIZE FOR POLITICAL WRITING 2023
 'This is what journalism is for' - Observer
 Time to Think goes behind the headlines to reveal the truth about the NHS's flagship gender service for children. The Gender Identity Development Service (GIDS),

based at the Tavistock and Portman Trust in North London, was set up initially to provide — for the most part — talking therapies to young people who were questioning their gender identity. But in the last decade GIDS has referred more than a thousand children, some as young as nine years old, for medication to block their puberty. In the same period, the number of young people seeking GIDS's help exploded, increasing twenty-five-fold. The profile of the patients changed too: from largely pre-pubescent boys to mostly adolescent girls, who were often contending with other difficulties. Why had the patients changed so dramatically? Were all these distressed young people best served by taking puberty blockers and then cross-sex hormones, which cause irreversible changes to the body? While some young people appeared to thrive after taking the blocker, many seemed to become worse. Was there enough clinical evidence to justify such profound

medical interventions in the lives of young people who had so much else to contend with? This urgent, scrupulous and dramatic book explains how, in the words of some former staff, GIDS has been the site of a serious medical scandal, in which ideological concerns took priority over clinical practice. Award-winning journalist Hannah Barnes has had unprecedented access to thousands of pages of documents, including internal emails and unpublished reports, and well over a hundred hours of personal testimony from GIDS clinicians, former service users and senior Tavistock figures. The result is a disturbing and gripping parable for our times.

Sex Hormones and Gender Differences in Immune Responses - Elena Ortona
2019-07-31

Increasingly clear evidence points to the need to consider gender differences in human health. In this collection of papers, recent research that supports gender differences in the immune system are

discussed. We have loosely divided the eBook into two sections. The first section focuses on the role of steroid hormone interactions within the immune system, and their impact on autoimmune diseases, infection and allergy. This section contains comprehensive reviews and an opinion article about this topic. In the following section, original research articles revolve around the effects of the sex hormones on immune response. Two original manuscripts deal with the role of estrogen receptors in autoimmune diseases. Other two research articles discuss the role of the immune system during pregnancy. Finally, differences between males and females in infections are the topic of further two research articles. We are confident this collection of papers will be important for exploring and developing a greater understanding of gender differences in human health and disease.

In July 2012, aged thirty, Juliet Jacques underwent sex reassignment surgery—a process she chronicled with unflinching honesty in a serialised national newspaper column. Trans tells of her life to the present moment: a story of growing up, of defining yourself, and of the rapidly changing world of gender politics. Fresh from university, eager to escape a dead-end job and launch a career as a writer, she navigates the treacherous waters of a world where, even in the liberal and feminist media, transgender

identities go unacknowledged, misunderstood or worse.

Revealing, honest, humorous, and self-deprecating, Trans includes an epilogue with Sheila Heti, author of *How Should a Person Be?*
