Uncommon Causes of Stroke - Louis R. Caplan 2008-10-09

Most strokes are attributed to atherosclerosis of neck and intracranial arteries, brain embolism from the heart, and penetrating artery disease; these are discussed in detail in many other books. This compendium fills an important niche by providing authoritative discussions on the other, less common causes of stroke, including various forms of angitis, coagulation disorders, infective, paraneoplastic and metabolic disorders that may be associated with stroke, and a number of rare syndromes such as Eales disease and Fabry's disease. This new edition contains detailed, up-to-date information about the nature, diagnosis, and treatment of those relatively uncommon types of cerebrovascular disease that cause strokes. It is therefore a unique scientific and clinical resource that provides a useful reference to help physicians diagnose and treat stroke patients who do not fit well into the usual clinical categories. New chapters include stroke in patients with Lyme disease, scleroderma, Cogan's syndrome, Chagas' disease, and HIV.

Migraine - Robert A. Davidoff 2002-02-14

Migraine: Manifestations, Pathophysiology, and Management, Second Edition, is a much expanded, updated monograph that focuses in detail on migraine's diverse variations, its pathophysiology, and its treatment. Authored by a clinician/scientist who himself suffers from migraine, the book's premise is that the clinical significance of migraine and its treatment are intelligible only if the physician understands the anatomical, physiological, and pharmacological factors underlying both head pain and the other manifestations of migraine. The book provides clear clinical descriptions of the myriad of specific migraine syndromes, and discusses the rationale for, and elements of, a sensitive, inclusive patient history. Also covered are important but sometimes ignored topics such as environmental triggering of migraine and myofascial syndromes. The Second Edition also bridges the gap between basic science and clinical practice by explaining those substantive advances made in understanding fundamental mechanisms of head pain and aura. Recent knowledge about genetics, hormonal changes, cerebral circulation, nitric oxide, peptides, central sensitization of trigeminal neurons, and the role of periaqueductal gray matter buttress the discussion of basic mechanisms. On the treatment side, the Second Edition reflects the impressive advances in pharmacological approaches to migraine. There is a greatly expanded section on the triptans and their mechanisms of action, and rationales and practical information about the use of all other viable anti-migraine and prophylactic drugs. Psychobiological aspects of stress and stress management, elimination of environmental stimuli, the educational facets of management, and aspects of the patient/physician interaction so crucial in the treatment of migraine are all discussed. Special problems associated with the care of women, children, the elderly, patients with intractable headaches, and emergency department patients are thoroughly reviewed. In sum, this scholarly, well-referenced book offers in one volume a comprehensive scientific and clinical discussion of migraine headache.

Cases unfold just the way they do in your clinic. Each case is accompanied with thoughtful clinical commentary and key messages from the author. Each chapter uses high-quality radiographic images, clinical photos, and full-color drawings to facilitate a clear, easy-to-understand approach to evaluation and diagnosis. Cervicogenic Headache Alleviation After Cervical Coblation Nucleoplasty - 2016

Abstract : Abstract: A degenerative cervical disc is a pain generator for headaches, and headaches can benefit from cervical prolapse surgery. However, as an alternative intervention for open cervical surgery, no study has reported whether headaches can benefit from cervical nucleoplasty. The objective of this study was to evaluate the efficacy of cervical coblation nucleoplasty in the treatment of cervicogenic headaches. In a prospective cohort study performed between December 2013 and August 2015, 20 patients with cervicogenic headaches undergoing cervical nucleoplasty for shoulder-arm pain were recruited into group C, and 20 patients with cervicogenic headaches undergoing lumbar nucleoplasty for low back pain, matched for age and sex, were recruited into group L. Cervicogenic pain was diagnosed according to the International Headache Society criteria. During the 24-month follow-up, pain visual analog scale (VAS) scores were collected as the primary outcomes, and significant pain relief rate, Neck Disability Index (NDI) headache scores, and Patients Satisfaction Index (PSI) scores were recorded as secondary outcomes to evaluate headache severity and physical function postoperatively. During the 24-month follow-up, a significant decrease in headache VAS scores was observed in group C but not in group L. NDI and PSI scores in group C were better than those in group L. In comparison with the final follow-up, no significant differences in the NDI and PSI scores were found in all observations after surgery. In comparison to group L, $\geq 50\%$ pain relief was significantly better in group C. No serious complications were observed except for $\leq 20\%$ of ecchymoma at the needle insertion site. This prospective study indicated that cervicogenic headaches may benefit from nucleoplasty.
