Androgens and the Aging Male - B.J. Oddens 1996-11-15

While menopause in women is a well-established and well documented phenomenon, the andropause in men is a relatively new concept. The terms male menopause and andropause suggest that this is an abrupt phenomenon related to a sudden deprivation of sex hormones. Unlike the menopause, which has a relatively sudden onset, the andropause appears to be a gradual process. It has been hypothesized that an androgen deficiency might develop with aging. *Androgens and the Aging Male* explores this hypothesis. The book focuses on the gradually progressive problems related to the decline in androgens that can occur with advancement of age. It examines the debate about the extent to which an age-dependent decline in androgens leads to health problems that affect or impair the quality of life, and the theory behind it. In addition, it reviews studies evaluating the effects of androgen supplementation. *Androgens and the Aging Male* comprehensively covers androgen function and how it changes over time.

Advances in Research and Applications - Gerald Litwack 2000-01-27

Under the capable and qualified editorial leadership of Dr. Gerald Litwack, *Vitamins and Hormones* continues to publish cutting-edge reviews of interest to endocrinologists, biochemists, nutritionists, pharmacologists, cell biologists, and molecular biologists. First published in 1943, *Vitamins and Hormones* is the longest-running serial published by Academic Press. In the early days of the Serial, the subjects of vitamins and hormones were quite distinct. Now, new discoveries have proved that several of the vitamins function as hormones and many of the substances inferred by the title of the serial function in signal transduction processes. Accordingly, the Editor-in-Chief has expanded the scope of the serial to reflect this newer understanding of function-structure relationships in cellular communication. The Editorial Board now reflects expertise in the field of hormone action, vitamin action, X-ray crystal structure, physiology, and enzyme mechanisms.

Sex Hormonal Profile During The Development From Endometrial Hyperplastic Disease To Endometrial Cancer - Yue Shi 2017

PurposeTo investigate the endocrine characteristics and abnormalities through the development from endometrial hyperplasia to endometrial cancer
Patients and MethodsA total of 1488 women were enrolled, including 768 healthy women, 103 patients were diagnosed with disordered proliferative endometrium (DPE), 206 with simple hyperplasia (SH), 158 with complex hyperplasia (CH), 131 with atypical endometrial hyperplasia (AEH), and 122 with endometrial carcinoma (EC) (G1, G2). Serum sex hormone panel including sex hormone binding globulin (SHBG), serum estradiol (E2), progesterone (P), testosterone (T), follicle-stimulating hormone (FSH), and luteinizing hormone (LH), fasting blood glucose (FBG), fasting serum insulin (FINS) and body mass index (BMI) were evaluated. Results
Physiologically, text-book hormonal profiles were confirmed with our study in control group. Significant differences were found among different stages during disease progression for all endocrine factors except for testosterone. Further multivariate logistic regression test holding age constant noted estradiol elevation were observed only in pre-malignant stage, while progesterone decrement persisted from DPE to EC. Disease progression seemed only associated with total E2 level instead of the free form. BMI gradually increased and peaked at EEC, with both median and mean levels higher than 25kg/m². In multivariate analysis, obesity, SHBG and IR were shown to be most associated with the disease progression. Conclusion:Estrogen was observed to be consistently increased starting from DPE and peaked in the group of AEH while decreased sharply once the disease progressed into EC. We hypothesized This is indicating an analogy for estrogen as a guider in theater, once the audience is seated in the seat of u201ccanceru201d, the guider left immediately. Our study further addressed that obesity is the most critical risk factor for EC, instead of estrogen exposure.

Hormones, Metabolism and the Benefits of Exercise - Bruce Spiegelman 2018-03-07

The world is faced with an epidemic of metabolic diseases such as obesity and type 2 diabetes. This is due to changes in dietary habits and the decrease in physical activity. Exercise is usually part of the prescription, the first line of defense, to prevent or treat metabolic disorders. However, we are still learning how and why exercise provides metabolic benefits in human health. This open access volume focuses on the cellular and molecular pathways that link exercise, muscle biology, hormones and metabolism. This will include novel "myokines" that might act as new therapeutic agents in the future.

Etude de la testostérone et de la sex hormone binding globulin dans l'évaluation du profil à risque cardiovasculaire chez des sujets diabétiques de type 2 en Guadeloupe - Vanéva Chingan 2013

Introduction : La prévalence du diabète est élevée en Guadeloupe. La fréquence des coronaropathies serait pourtant moins élevée qu'en Métropole. De nouveaux paramètres seraient impliqués dans le risque cardiovasculaire comme la testostérone (T) ou la Sex Hormone Binding Globulin (SHBG). Objectifs: Etudier les concentrations de T totale et de SHBG chez des Afro-Caribéens diabétiques de type 2 (DT2). Analyser leurs relations avec les profils métaboliques et cardiovasculaires. Matériels-Méthodes: Étude transversale incluant des DT2, recrutés en diabétologie. Dosage de la T par chimiluminescence et de la SHBG par une technique IRMA. Comparaison des moyennes par le test de Chi². Analyse des corrélations par le test de Pearson. Résultats: 133 hommes inclus, âge 61±10ans, indice de masse corporelle (IMC) 28±5kg/m², Tour de taille 99,4±13,8cm, fréquence de la dyslipidémie : 56,4%, de l'HTA : 71%, des coronaropathies : 28%. Concentrations de T totale et de SHBG respectivement à 12,2±6nmol/l et 36±18nmol/l. Les concentrations

Trends in Oral Contraception - R.F. Harrison 2013-11-08

After 20 years of oral contraceptive (OC) use, epidemiological data and scientific research have led to the now accepted evidence that the most important effect produced by these drugs on humans, other than the prevention of unwanted pregnancy, is an increase in the risk of cardiovascular disease. Because the incidence of cardiovascular disease is also related to disturbances of the lipoprotein metabolism, it appears to be opportune to analyse the different aspects of the interaction between female hormones and lipoprotein (LP) metabolism. SERUM LIPOPROTEINS: METABOLISM In the serum, lipids (cholesterol (C), triglycerides (TG), and phospholipids) are associated with peptides called apoproteins: apoproteins A-I, A-11, B, C, etc. The chylomicrons and the very low density lipoproteins (VLDL) are rich in TG and contain the Apo B-48; the low density lipoproteins (LDL) are rich in C and contain the Apo B-100; and the high density lipoproteins (HDL) are rich in proteins (Apo A-I, Apo A-II) and phospholipids.

Testosterone - Alexandre Hohl 2023

Even though research on testosterone is increasing, there is still much controversy regarding its physiology and clinical use. This book provides a broad overview on testosterone, from its basic features to the most recent evidence of clinical applicability. In addition, specific conditions in which testosterone play a pivotal role are discussed in detail, such as hypogonadism, misuse and abuse, puberty, cardiovascular effects and testosterone therapy. The testes are vital organs for reproduction of the human species, besides being the main source of testosterone production in men. Although not essential for survival, these singular structures represent the essence of male biological function. Testosterone is the most important testicular androgen in men. Low serum testosterone levels are associated with cardiovascular morbidity, metabolic syndrome, type 2 diabetes mellitus, atherosclerosis, osteoporosis, sarcopenia, and mortality. Also, there is

increasing evidence that serum testosterone is a major biomarker status of men's health in general.

Hypogonadism in a male refers to a decrease in one or both of the two major functions of the testes: sperm production or testosterone production. These abnormalities can result from disease of the testes (primary hypogonadism) or disease of the pituitary or hypothalamus (secondary hypogonadism). Currently, the clinical features of male hypogonadism are sufficiently well-recognized, the causes are well-known, and the tests of the hypothalamic-pituitary-testicular axis are accurate enough for the diagnosis in most patients. Testosterone, the focus hormone of this book, is used in different forms and routes of administration. Several authors unravel its peculiarities and assist in choosing the most suitable form in each case, as well as the possible risks of its misuse or even abuse in men and women, seeking alternatives to help patients in this situation.

A Pilot Study on Investigation of Chinese Medicinal Classification and Its Relationship with Hormones in Menopausal Women - Lam Lam 2017-01-26

This dissertation, "A Pilot Study on Investigation of Chinese Medicinal Classification and Its Relationship With Hormones in Menopausal Women" by Lam, Lam, 兰兰, was obtained from The University of Hong Kong (Pokfulam, Hong Kong) and is being sold pursuant to Creative Commons: Attribution 3.0 Hong Kong License. Abstract: Objective: To develop a validated questionnaire for the assessment of menopausal syndrome in Chinese Medicine and through the analysis of the basic menopausal syndrome classification in Chinese Medicine to explore the use of objective hormone markers as one of the evidence for the Chinese Medicinal classification and guidance for application of herbal medicines by Chinese Medicine Practitioners. Methods: The major symptoms related to typical syndromes of menopause were extracted from Chinese Medicine textbook, international diagnostic guide of Chinese Medicine, classic and contemporary literature of Chinese Medicine and subjective symptoms were eliminated to facilitate the administration of a self-reported outcome questionnaire. The symptoms related to menopause in Chinese Medicine were identified and redefined to improve the content validity. A total of 353 menopausal women were included in the study. Participants were assessed through face-to-face interview by registered Hong Kong Chinese Medicine Practitioner to complete the questionnaire and serum samples for hormones measurement were collected after an overnight fast in the morning of the assessment day. Serum Estradiol (E2), Testosterone (T), Progesterone (P), Luteinizing Hormone (LH), Follicle Stimulating Hormone (FSH) and Sex-Hormone Binding Globulin (SHBG) were measured by electrochemiluminescence immunoassays (ECLIA). Free estradiol (fE2), non-Sex-Hormone Binding Globulin bound Estradiol (non-SHBG-E2), free Testosterone (fT), and non-Sex-Hormone Binding Globulin bound Testosterone (non-SHBG-T) were calculated to assess hormone availability and activity. E2/T ratio was also calculated to investigate the balance of E2 and T in the body. Results: Principal Component Analysis (PCA) was conducted. Symptoms related to Deficiency of Yin and symptoms related to Deficiency of Yang were extracted and the relationship between the syndromes and E2, T, P, LH, FSH, SHBG, fT, non-SHBG-T, fE2, non-SHBG-E2 and E2/T ratio were investigated. For symptoms related to Deficiency of Yin, E2 (ppppor little with moderate and severe presentation of symptoms. For symptoms related to Deficiency of Yang, SHBG (p=0.042, p=0.002, p showed an increase, fT (p=0.044, p=0.049, p=0.003) and non-SHBG-T (p=0.044, p=0.049, p=0.003) showed a decrease which was significant for other three groups while comparing to the no or little group. Conclusion: Menopausal Syndrome Questionnaire was developed and validated in the study. Major syndromes and symptoms involved in the diagnosis of menopausal syndrome in Chinese Medicine were identified and good test-retest reliability was also demonstrated. From the result, we hypothesize that the presentation of symptoms related to Deficiency of Yin may be closely correlated with the menopausal transition in Western Medicine and the presentation of symp

Hormones, Cognition and Dementia - Eef Hogervorst 2009-09-24

A decade ago, oestrogen-containing hormone therapy was viewed as a promising strategy for the prevention and treatment of dementia and age-related cognitive decline. However, treatment trials in women with Alzheimer's disease showed that oestrogens did not reverse cognitive impairment, and clinical trials in healthy older women indicated that oestrogens did not prevent cognitive decline. The Women's

Health Initiative Memory Study trial even suggested an increased risk of dementia with treatment late in life. What happened? How are we to understand these findings? What are the implications for middle-aged and older women? What about testosterone, and what about men? And where do we go from here? This book brings together world-renowned experts in basic and clinical research on sex steroids, aging, and cognition to integrate existing findings with emerging new data, and offer challenging hypotheses on these key issues.
