

Woman To Win Nobel Prize In Economics

The Calculus of Consent James M. Buchanan 1965 A scientific study of the political and economic factors influencing democratic decision making

Elinor Ostrom's Rules for Radicals 2017 Elinor Ostrom was both a groundbreaking thinker and one of the foremost economists of our age. The first and only woman to win the Nobel Prize for Economics, her revolutionary theorizing of the commons opened the way for non-capitalist economic alternatives on a massive scale. And yet, astonishingly, most modern radicals know little about her. Elinor Ostrom's Rules for Radicals fixes that injustice, revealing the indispensability of her work on green politics, alternative economics, and radical democracy. Derek Wall's analysis of her theses addresses some of the common misconceptions of her work and reveals her strong commitment to a radical ideological framework. This helpful guide will engage scholars and activists across a range of disciplines, including political economy, political science, and ecology, as well as those keen to implement her work in practice. As activists continue to reject traditional models of centralized power, Ostrom's theories will become even more crucial in creating economies that exist beyond markets and states.--

The Sex Factor Victoria Bateman 2019-07-01 Why did the West become so rich? Why is inequality rising? How 'free' should markets be? And what does sex have to do with it? In this passionate and skilfully argued book, leading feminist Victoria Bateman shows how we can only understand the burning economic issues of our time if we put sex and gender - 'the sex factor' - at the heart of the picture. Spanning the globe and drawing on thousands of years of history, Bateman tells a bold story about how the status and freedom of women are central to our prosperity. Genuine female empowerment requires us not only to recognize the liberating potential of markets and smart government policies but also to challenge the double-standard of many modern feminists when they celebrate the brain while denigrating the body. This iconoclastic book is a devastating exposé of what we have lost from ignoring 'the sex factor' and of how reversing this neglect can drive the smart economic policies we need today.

Strong Medicine Michael Kremer 2016-05-31 From Nobel Prize-winning economist Michael Kremer and fellow leading development economist Rachel Glennerster, an innovative solution for providing vaccines in poor countries Millions of people in the third world die from diseases that are rare in the first world—diseases like malaria, tuberculosis, and schistosomiasis. AIDS, which is now usually treated in rich countries, still ravages the world's poor. Vaccines offer the best hope for controlling these diseases and could dramatically improve health in poor countries. But developers have little incentive to undertake the costly and risky research needed to develop vaccines. This is partly because the potential consumers are poor, but also because governments drive down prices. In Strong Medicine, Michael Kremer and Rachel Glennerster offer an innovative yet simple solution to this worldwide problem: "Pull" programs to stimulate research. Here's how such programs would work. Funding agencies would commit to purchase viable vaccines if and when they were developed. This would create the incentives for vaccine developers to produce usable products for these neglected diseases. Private firms, rather than funding agencies, would pick which research strategies to pursue. After purchasing the vaccine, funders could distribute it at little or no cost to the afflicted countries. Strong Medicine details just how these legally binding commitments would work. Ultimately, if no vaccines were developed, such a commitment would cost nothing. But if vaccines were developed, the program would save millions of lives and would be among the world's most cost-effective health interventions.

Elinor Ostrom Vlad Tarko 2016-12-15 An accelerated introduction into the life and work of the first female Nobel Laureate for Economics, Elinor Ostrom.

The Nobel Factor Avner Offer 2019-11-19 How the creation of the Nobel Prize in Economics changed the economics profession, Sweden, and the world Our confidence in markets comes from economics, and our confidence in economics is underpinned by the Nobel Prize in Economics, which

was first awarded in 1969. Was it a coincidence that the prize and the rise of free-market liberalism began at the same time? The Nobel Factor is the first book to describe the origins and power of the most important prize in economics. It tells how the prize, created by the Swedish central bank, emerged from a conflict between central bank orthodoxy and Sweden's social democracy. The aim was to use the halo of the Nobel brand to influence the future of Sweden and the rest of the developed world by enhancing the bank's authority and the prestige of market-friendly economics. And the strategy has worked spectacularly—with sometimes disastrous results for societies striving to cope with the requirements of economic theory and deregulated markets. Drawing on previously untapped archives and providing a unique analysis of the sway of prizewinners, *The Nobel Factor* offers an unprecedented account of the real-world consequences of economics and its greatest prize.

The Nobel Prize Burton Feldman 2000 Discusses the Nobel Institution in detail, telling about the award and its beginnings, what it means to win a Nobel Prize, the fields in which it is presented, who judges and how the prize is awarded, and more.

Governing the Commons Elinor Ostrom 2015-09-23 Tackles one of the most enduring and contentious issues of positive political economy: common pool resource management.

The Uncommon Knowledge of Elinor Ostrom Erik Nordman 2021-07-08 In the 1970s, the accepted environmental thinking was that overpopulation was destroying the earth. Prominent economists and environmentalists agreed that the only way to stem the tide was to impose restrictions on how we used resources, such as land, water, and fish, from either the free market or the government. This notion was upended by Elinor Ostrom, whose work to show that regular people could sustainably manage their community resources eventually won her the Nobel Prize. Ostrom's revolutionary proposition fundamentally changed the way we think about environmental governance. In *The Uncommon Knowledge of Elinor Ostrom*, author Erik Nordman brings to life Ostrom's brilliant mind. Half a century ago, she was rejected from doctoral programs because she was a woman; in 2009, she became the first woman to win the Nobel Prize in Economics. Her research challenged the long-held dogma championed by Garrett Hardin in his famous 1968 essay, "The Tragedy of the Commons," which argued that only market forces or government regulation can prevent the degradation of common pool resources. The concept of the "Tragedy of the Commons" was built on scarcity and the assumption that individuals only act out of self-interest. Ostrom's research proved that people can and do act in collective interest, coming from a place of shared abundance. Ostrom's ideas about common resources have played out around the world, from Maine lobster fisheries, to ancient waterways in Spain, to taxicabs in Nairobi. In writing *The Uncommon Knowledge of Elinor Ostrom*, Nordman traveled extensively to interview community leaders and stakeholders who have spearheaded innovative resource-sharing systems, some new, some centuries old. Through expressing Ostrom's ideas and research, he also reveals the remarkable story of her life. Ostrom broke barriers at a time when women were regularly excluded from academia and her research challenged conventional thinking. Elinor Ostrom proved that regular people can come together to act sustainably—if we let them. This message of shared collective action is more relevant than ever for solving today's most pressing environmental problems.

Explorations in Pragmatic Economics George A. Akerlof 2005-03-17 For twenty years since the publication of his seminal paper "The Market for 'Lemons'", George A. Akerlof's work has changed the way we see economics, and the economics of information in particular. In abandoning the perfect-competition benchmarks of classical economics, the pragmatic modern economics championed by Akerlof has provided deep insights into markets, identity, discrimination, motivation, and work, and into behavioural economics in general. This collection of Akerlof's most important papers provide both an introduction to Akerlof's work and a grounding in modern economics. Divided into two broad areas, micro- and macroeconomics, they cover the economics of information; the theory of unemployment; macroeconomic equilibria; the demand for money; psychology and economics; and the nature of discrimination and other social issues. The collection closes with Akerlof's 2001 Nobel Lecture, in which he argues that it is imperative that macroeconomics be considered inherently behavioural. Akerlof's substantial introduction to this volume tells the story of

these papers, connecting them and showing how his later work has built upon his early contributions, in many cases improving their arguments, their subtlety, and their usefulness today.

Things Fall Apart Chinua Achebe 2018

Deaths of Despair and the Future of Capitalism Anne Case 2021-03-02 "This book documents the decline of white-working class lives over the last half-century and examines the social and economic forces that have slowly made these lives more difficult. Case and Deaton argue that market and political power in the United States have moved away from labor towards capital--as unions have weakened and politics have become more favorable to business, corporations have become more powerful. Consolidation in some American industries, healthcare especially, has brought an increase in monopoly power in some product markets so that it is possible for firms to raise prices above what they would be in a freely competitive market. This, the authors argue, is a major cause of wage stagnation among working-class Americans and has played a substantial role in the increase in deaths of despair. [The authors] offer a way forward, including ideas that, even in our current political situation, may be feasible and improve lives"--

Cooking to Save Your Life Abhijit V. Banerjee 2021

Poor Economics Abhijit V. Banerjee 2012-03-27 The winners of the Nobel Prize in Economics upend the most common assumptions about how economics works in this gripping and disruptive portrait of how poor people actually live. Why do the poor borrow to save? Why do they miss out on free life-saving immunizations, but pay for unnecessary drugs? In *Poor Economics*, Abhijit V. Banerjee and Esther Duflo, two award-winning MIT professors, answer these questions based on years of field research from around the world. Called "marvelous, rewarding" by the Wall Street Journal, the book offers a radical rethinking of the economics of poverty and an intimate view of life on 99 cents a day. *Poor Economics* shows that creating a world without poverty begins with understanding the daily decisions facing the poor.

Small Loans, Big Dreams Alex Counts 2008-03-31 Microfinancing is considered one of the most effective strategies in the fight against global poverty. And now, in *Small Loans, Big Changes*, author Alex Counts reveals how Nobel Prize Winner Muhammad Yunus revolutionized global antipoverty efforts through the development of this approach. This book presents compelling stories of women benefiting from Yunus's microcredit in rural Bangladesh and urban Chicago, and recounts the experiences of different borrowers in each country, interspersing them with stories of Yunus, his colleagues, and their counterparts in Chicago.

Good Economics for Hard Times Abhijit V. Banerjee 2019-11-12 FROM THE WINNERS OF THE 2019 NOBEL PRIZE IN ECONOMICS 'Wonderfully refreshing . . . A must read' Thomas Piketty In this revolutionary book, prize-winning economists Abhijit V. Banerjee and Esther Duflo show how economics, when done right, can help us solve the thorniest social and political problems of our day. From immigration to inequality, slowing growth to accelerating climate change, we have the resources to address the challenges we face but we are so often blinded by ideology. Original, provocative and urgent, *Good Economics for Hard Times* offers the new thinking that we need. It builds on cutting-edge research in economics - and years of exploring the most effective solutions to alleviate extreme poverty - to make a persuasive case for an intelligent interventionism and a society built on compassion and respect. A much-needed antidote to polarized discourse, this book shines a light to help us appreciate and understand our precariously balanced world.

Little Girls and Nobel Prizes Andrew Sassani 2017-07-31 Girl-Empowerment at it's best. This book empowers girls with real-life examples that nothing can hold them back from pursuing what they love and achieving their dreams. This based-on-true-stories children's book highlights the lives, struggles, as well as educational & professional achievements of all female Nobel laureates from America. Despite life's biggest challenges and with their sheer Grit to pursue what they love, they broke professional-educational ceilings along the way and became America's female Nobel laureates. Along the way, they literally changed America and the world. Each woman is featured in her own chapter with a colorful portrait (at the end of each chapter). A few storied examples from the book:""Her Dyslexia caused poor standardized test scores as a student. Yet, she won a Nobel Prize

as an adult and became a Distinguished Professor at Johns Hopkins University." "As a child of first-generation immigrants and without a formal PhD, she became the 1st woman inducted into Inventors Hall of Fame and received a Nobel Prize." "She was rejected from entering a PhD program in Economics. Yet, she became the only woman in the world to win the Nobel Prize in Economics." "Her parents escaped racism of the south. She grew up in poverty of the Great Depression. She was the only African American student in her first-grade class. She won a Nobel Prize and is a recipient of the Presidential Medal of Freedom." "As a young woman, she had to work two secretarial jobs to pay for college. Years later, she won a Nobel Prize in medicine." "As a child, her parents couldn't afford to raise her so they sent her to live with other family members. She grew up and became America's only woman to win an unshared Nobel Prize in Medicine." "She suffered through starvation-related hospitalizations of World War in Europe. As a first-generation immigrant to the U.S. and despite facing gender discriminatory attitudes of the time, she went on to become America's 1st woman to win a Nobel Prize in science." "She lost her mother at the age of 2. She lost four other siblings by the time she was 8. Her Tuberculosis of the spine forced her to walk with a limp. She became America's first-ever winner of a Nobel Prize and a co-founder of the American Civil Liberties Union (ACLU).

A Monetary History of the United States, 1867-1960 Milton Friedman 2008-09-02 Writing in the June 1965 issue of the *Economic Journal*, Harry G. Johnson begins with a sentence seemingly calibrated to the scale of the book he set himself to review: "The long-awaited monetary history of the United States by Friedman and Schwartz is in every sense of the term a monumental scholarly achievement--monumental in its sheer bulk, monumental in the definitiveness of its treatment of innumerable issues, large and small . . . monumental, above all, in the theoretical and statistical effort and ingenuity that have been brought to bear on the solution of complex and subtle economic issues." Friedman and Schwartz marshaled massive historical data and sharp analytics to support the claim that monetary policy--steady control of the money supply--matters profoundly in the management of the nation's economy, especially in navigating serious economic fluctuations. In their influential chapter 7, *The Great Contraction*--which Princeton published in 1965 as a separate paperback--they address the central economic event of the century, the Depression. According to Hugh Rockoff, writing in January 1965: "If Great Depressions could be prevented through timely actions by the monetary authority (or by a monetary rule), as Friedman and Schwartz had contended, then the case for market economies was measurably stronger." Milton Friedman won the Nobel Prize in Economics in 1976 for work related to *A Monetary History* as well as to his other Princeton University Press book, *A Theory of the Consumption Function* (1957).

Economic Philosophy Joan Robinson 2021-03-28 Joan Robinson (1903-1983) was one of the greatest economists of the twentieth century and a fearless critic of free-market capitalism. A major figure in the controversial 'Cambridge School' of economics in the post-war period, she made fundamental contributions to the economics of international trade and development. In *Economic Philosophy* Robinson looks behind the curtain of economics to reveal a constant battle between economics as a science and economics as ideology, which she argued was integral to economics. In her customary vivid and pellucid style, she criticizes early economists Adam Smith and David Ricardo, and neo-classical economists Alfred Marshall, Stanley Jevons and Leon Walras, over the question of value. She shows that what they respectively considered to be the generators of value - labour-time, marginal utility or preferences - are not scientific but 'metaphysical', and that it is frequently in ideology, not science, that we find the reason for the rejection of economic theories. She also weighs up the implications of the Keynesian revolution in economics, particularly whether Keynes's theories are applicable to developing economies. Robinson concludes with a prophetic lesson that resonates in today's turbulent and unequal economy: that the task of the economist is to combat the idea that the only values that count are those that can be measured in terms of money. This Routledge Classics edition includes a new foreword by Sheila Dow.

ELINOR OSTROM'S RULES FOR RADICALS DEREK. WALL 2017

The Winner's Curse Richard Thaler 2012-06-26 Winner of the Nobel Memorial Prize in Economic

Sciences Richard Thaler challenges the received economic wisdom by revealing many of the paradoxes that abound even in the most painstakingly constructed transactions. He presents literate, challenging, and often funny examples of such anomalies as why the winners at auctions are often the real losers—they pay too much and suffer the "winner's curse"—why gamblers bet on long shots at the end of a losing day, why shoppers will save on one appliance only to pass up the identical savings on another, and why sports fans who wouldn't pay more than \$200 for a Super Bowl ticket wouldn't sell one they own for less than \$400. He also demonstrates that markets do not always operate with the traplike efficiency we impute to them.

Career and Family Claudia Goldin 2021-10-12 "In *Career and Family*, Claudia Goldin builds on decades of complex research to examine the gender pay gap and the unequal distribution of labor between couples in the home. Goldin argues that although recent public and private discourse has brought these concerns to light, the actions taken—such as a single company slapped on the wrist or a few progressive leaders going on paternity leave—are the economic equivalent of tossing a band-aid to someone with cancer. These solutions, Goldin writes, treat the symptoms and not the disease of gender inequality in the workplace and economy. Goldin points to data that reveals how the pay gap widens further down the line in women's careers, about 10 to 15 years out, as opposed to those beginning careers after college. She examines five distinct groups of women over the course of the twentieth century: cohorts of women who differ in terms of career, job, marriage, and children, in approximated years of graduation—1900s, 1920s, 1950s, 1970s, and 1990s—based on various demographic, labor force, and occupational outcomes. The book argues that our entire economy is trapped in an old way of doing business; work structures have not adapted as more women enter the workforce. Gender equality in pay and equity in home and childcare labor are flip sides of the same issue, and Goldin frames both in the context of a serious empirical exploration that has not yet been put in a long-run historical context. *Career and Family* offers a deep look into census data, rich information about individual college graduates over their lifetimes, and various records and new sources of material to offer a new model to restructure the home and school systems that contribute to the gender pay gap and the quest for both family and career"--

An Uncertain Glory Jean Dreze 2013-07-04 From two of India's leading economists, Jean Drèze (Hunger and Public Action) and Nobel Prize-winner Amartya Sen (The Idea of Justice), *An Uncertain Glory* is a passionate, considered argument for the need for a greater understanding of inequalities in India, despite economic development. When India regained independence from colonial rule in 1947, it immediately adopted a firmly democratic political system, with multiple parties, freedom of speech and extensive political rights. The famines of the British era disappeared, and steady economic growth replaced stagnation, accelerating further over the last three decades to make India's growth the second fastest among large economies. Despite a recent dip, it is still one of the highest in the world. Maintaining rapid yet environmentally sustainable growth remains an important and achievable goal for India. Drèze and Sen argue that the country's main problems lie in the disregarding of the essential needs of the people. There have been major failures both to foster participatory growth and to make good use of the public resources generated by economic growth to enhance people's living conditions; social and physical services remain inadequate, from schooling and medical care to safe water, electricity, and sanitation. In the long run, even high economic growth is threatened by the underdevelopment of infrastructure and the neglect of human capabilities, in contrast with the holistic approach pioneered by Japan, South Korea and China. In a democracy, addressing these failures requires not only significant policy change, but also a clearer public understanding of the abysmal extent of deprivation in the country. Yet public discussion in India tends to be constricted to the lives and concerns of the relatively affluent. This book presents a powerful analysis not only of India's deprivations and inequalities, but also of the restraints on addressing them - and of the possibility of change through democratic practice.

nature since Marilyn Waring's groundbreaking critique of the system of national accounts, *If Women Counted* (1988). It features theoretical, practical and policy oriented contributions, empirical studies, and new conceptualizations, theorizations and problematizations of defining and accounting for the value of nature and unpaid household work, eco-feminism, national and international policy processes, gender budgeting, unpaid care and HIV/AIDS policy, activism and artwork, and mirrors the wide-ranging impact and resonance of Waring's work as well as the current frontiers of feminist economics.

Economyths David Orrell 2010-08-16 From the inability of wealth to make us happier, to our catastrophic blindness to the credit crunch, *Economyths* reveals ten ways in which economics has failed us all. Forecasters predicted a prosperous year in 2008 for financial markets - in one influential survey the average prediction was for an eleven percent gain. But by the end of the year, the Standard and Poor's 500 index - a key economic barometer - was down 38 percent, and major economies were plunging into recession. Even the Queen asked - "Why did no one see it coming?" An even bigger casualty was the credibility of economics, which for decades has claimed that the economy is a rational, stable, efficient machine, governed by well-understood laws. Mathematician David Orrell traces the history of this idea from its roots in ancient Greece to the financial centres of London and New York, shows how it is mistaken, and proposes new alternatives. *Economyths* explains how the economy is the result of complex and unpredictable processes; how risk models go astray; why the economy is not rational or fair; why no woman has ever won the Nobel Prize for economics; why financial crashes are less Black Swans than part of the landscape; and finally, how new ideas in mathematics, psychology, and environmentalism are helping to reinvent economics.

A Sorrow Beyond Dreams Peter Handke 2013-02-15 Winner of the 2019 Nobel Prize for Literature "My mother has been dead for almost seven weeks: I had better go to work before the need to write about her, which I felt so strongly at her funeral, dies away and I fall back into the dull speechlessness with which I reacted to the news of her suicide." So begins Peter Handke's extraordinary confrontation with his mother's death. In a painful and courageous attempt to deal with the almost intolerable horror of her suicide, he sets out to piece together the facts of her life, as he perceives them. What emerges is a loving portrait of inconsolable grief, a woman whose lively spirit has been crushed not once but over and over again by the miseries of her place and time. Yet well into middle age, living in the Austrian village of her birth, she still remains haunted by her dreams.

Identity Economics George A. Akerlof 2011-09-26 Annotation. This work bridges a critical gap in the social sciences. It brings identity and norms to economics. Nobel Michael Worek 2010-06-03 The story of the winners of the world's most prestigious prize, now updated to include the 2009 recipients. The Nobel Prize is widely regarded as the most prestigious award one can receive. The Prize is administered by the Nobel Foundation, and the award ceremonies receive extensive media coverage. The awards are often politically controversial, and many winners use their acceptance speech to further favorite causes. Along with background information, the book provides a look at the 200 most famous and most interesting Nobel winners. The profiles are arranged by prize and by year. A photo or illustration appears with each profiled Laureate. Other illustrations help to explain complex subjects in science and make it easier for the reader to appreciate the accomplishments for which the prize has been awarded. A number of fascinating facts emerge from this lively account. For example, only 40 of the 829 Nobel Laureates have been women, among them Marie Curie, who won twice. Linus Pauling is the only person to have been awarded two Nobel Prizes in different categories, the 1954 Nobel Prize in Chemistry and the 1962 Nobel Peace Prize. The youngest Laureate is Lawrence Bragg, who was 25 years old when he received the Nobel Prize in Physics with his father in 1915. The oldest is Leonid Hurwicz, who was 90 years old when he received the 2007 Economics Prize. Two Laureates have declined the Nobel Prize: Jean-Paul Sartre, and Le Duc Tho. Other famous names include Ernest Hemingway,

Albert Einstein, Albert Schweitzer, James Watson and Francis Crick, Paul Krugman, Charles Kao, Elizabeth Blackburn and Barack Obama. Nobel: A Century of Prize Winners is sure to find a readership among the millions who follow the awards each year and want to understand more about the most important prize in the world.

Working Together Amy R. Poteete 2010-04-12 Advances in the social sciences have emerged through a variety of research methods: field-based research, laboratory and field experiments, and agent-based models. However, which research method or approach is best suited to a particular inquiry is frequently debated and discussed. Working Together examines how different methods have promoted various theoretical developments related to collective action and the commons, and demonstrates the importance of cross-fertilization involving multimethod research across traditional boundaries. The authors look at why cross-fertilization is difficult to achieve, and they show ways to overcome these challenges through collaboration. The authors provide numerous examples of collaborative, multimethod research related to collective action and the commons. They examine the pros and cons of case studies, meta-analyses, large-N field research, experiments and modeling, and empirically grounded agent-based models, and they consider how these methods contribute to research on collective action for the management of natural resources. Using their findings, the authors outline a revised theory of collective action that includes three elements: individual decision making, microsituational conditions, and features of the broader social-ecological context. Acknowledging the academic incentives that influence and constrain how research is conducted, Working Together reworks the theory of collective action and offers practical solutions for researchers and students across a spectrum of disciplines.

Development as Freedom Amartya Sen 2001-01-18 In Development as Freedom Amartya Sen explains how in a world of unprecedented increase in overall opulence millions of people living in the

Third World are still unfree. Even if they are not technically slaves, they are denied elementary freedoms and remain imprisoned in one way or another by economic poverty, social deprivation, political tyranny or cultural authoritarianism. The main purpose of development is to spread freedom and its 'thousand charms' to the unfree citizens. Freedom, Sen persuasively argues, is at once the ultimate goal of social and economic arrangements and the most efficient means of realizing general welfare. Social institutions like markets, political parties, legislatures, the judiciary, and the media contribute to development by enhancing individual freedom and are in turn sustained by social values. Values, institutions, development, and freedom are all closely interrelated, and Sen links them together in an elegant analytical framework. By asking 'What is the relation between our collective economic wealth and our individual ability to live as we would like?' and by incorporating individual freedom as a social commitment into his analysis Sen allows economics once again, as it did in the time of Adam Smith, to address the social basis of individual well-being and freedom.

A Beautiful Mind Sylvia Nasar 2011-07-12 **Also an Academy Award-winning film starring Russell Crowe and Jennifer Connelly—directed by Ron Howard** The powerful, dramatic biography of math genius John Nash, who overcame serious mental illness and schizophrenia to win the Nobel Prize. "How could you, a mathematician, believe that extraterrestrials were sending you messages?" the visitor from Harvard asked the West Virginian with the movie-star looks and Olympian manner. "Because the ideas I had about supernatural beings came to me the same way my mathematical ideas did," came the answer. "So I took them seriously." Thus begins the true story of John Nash, the mathematical genius who was a legend by age thirty when he slipped into madness, and who—thanks to the selflessness of a beautiful woman and the loyalty of the mathematics community—emerged after decades of ghostlike existence to win a Nobel Prize for triggering the game theory revolution. The inspiration for an Academy Award-winning movie, Sylvia Nasar's now-classic biography is a drama about the mystery of the human mind, triumph over adversity, and the healing power of love.

Elinor Ostrom's Rules for Radicals Derek Wall 2017 Elinor Ostrom was the first woman to win the Nobel Prize for Economics. Her theorising of the commons has been celebrated as groundbreaking and opening the way for non-capitalist economic alternatives, yet, many radicals know little about her. This book redresses this, revealing the indispensability of her work for green politics, left economics and radical democracy. Ostrom has often been viewed as a conservative or managerial thinker; but Derek Wall's analysis of her work reveals a how it is invaluable for developing a left political programme in the twenty-first century. Central to Ostrom's work was the move 'beyond panaceas'; transforming institutions to widen participation, promote diversity and favour cooperation over competition. She regularly challenged academia as individualist, narrow and elitist and promoted a radical take on education, based on participation. Her investigations into how we share finite resources has radical implications for the Green movement and her rubric for a functioning collective ownership is highly relevant in order in achieving radical social change. As activists continue to reject traditional models of centralised power, Ostrom's work will become even more vital, offering a guide to creating economics that exists beyond markets and states.

The Great Escape Angus Deaton 2015-05-26 Asserts that 250 years ago, some parts of the world began to experience sustained progress, opening up gaps and setting the stage for today's hugely unequal world and examines the United States, a nation that has prospered but is today experiencing slower growth and increasing inequality.
