Darien Russell 2020-01-29

A Christian family enjoying life to the fullness and loving God is hit with tragedy. When they were coming back from a weeklong camping trip, just a mile from their home, a drunk driver hits them head on, hurting Chad and killing his wife. Leaving him to take care of their two children. Now Chad is living with the guilt, pain, and sorrow of his loss, at the same time trying to raise his two children, one with asthma and the other who is very sick and is in and out of the hospital. Then God steps on the scene and starts to work and heals his mind and heart. But it's up to Chad to walk through the open door that God provided, or will he close it and walk away? And can a woman named Chasity help heal the broken heart, as well as receive her own healing? Or will both refuse to take the chance at a promise of a new beginning?

A view From The Bottom -

Marlin 2013-11-29

I am one of 10 children from a poor family. We grew up on food from the surplus food

program. I worked as a structural steel fitter, ship fitter and millwright until I figured out that the equipment was more valuable than the people who used it, we were replaceable if we got injured or killed. I joined the Los Barbados Motorcycle Club and began to move to a new world during the early 1970's. We changed over to become members of the Outlaws Motorcycle Club shortly after that. I spent about 8 years as an outlaw. Then, I went to college starting in 1976 using Federal Job Power money. I moved from the biker world to a new world of what was then white collar jobs. This is the story of some of my time in each world and my transition between worlds. The rules for each are so different, they are effectively different worlds existing in the same physical space of this planet. It is clear to me why someone who becomes socially successful can't go back and help others from their old world. If you have something to lose, law enforcement types will use that

Girl Up - Laura Bates
2017-07-11

"They told you that you need to be thin and beautiful. They told you to wear longer skirts, avoid going out late at night, and move in groups. Wear shoes

you can run in more easily than heels. Dress to flatter your apple, pear, hourglass figure, but don't look like a slut. They said if you're strong or opinionated, you'll be shrill, bossy, a ballbreaker. They said 'That's not for girls,' 'Take it as a compliment,' 'Don't rock the boat.' They told you 'Beauty is on the inside,' but you knew they didn't really mean it. Well screw that. I'm here to tell you something else. Everyday Sexism Project founder Laura Bates mocks the ludicrous pressures and stereotypes faced by young women today. Hilarious, bold, and unapologetic, *Girl Up* sets the record straight."--Back cover.

my Ph. D. in Human Behavior I hold several life credentials in education earned during many years as an educator together with years spent working in the Aerospace Industry and other occupations. But to call Einstein's famous equation $E=MC^2$ incomplete because it does not account for life and death does seem quite extraordinary, yet these remain the two greatest mysteries they have ever been denying us thus far a "theory of everything." Something animates life and departs with death, but what this "something" is not all our science has yet discovered, though things like the Large Hadron Collider may provide needed insight, and it has been in the pursuit of knowledge about these two greatest mysteries that has compelled me into so many varied academic studies and careers attempting to make sense of the world and our place in it and how people think and deal with the issues of life and death philosophically, religiously, and politically. The things I have discovered along

the way compelled me to much research and speculation about these mysteries and how they impact our lives, to communicate my thoughts about them to share with others in a daily journal and posted to my website and provided in book format each year. These writings are of importance in an increasingly dangerous world with a most uncertain future due to so much corruption, ineptitude and lack of accountability in our own government as well as that of others, the abject failure of our schools due to the very same things especially the same lack of accountability we find in government, the religious and political hatreds with protracted wars worldwide and little to give hope for world peace I believed my articles about these important enough to publish in book format. Some years ago I removed from the greater part of society to live in semi-seclusion alone with my books and thoughts in a quiet part of the Sequoia National Forest devoting myself to

contemplation, speculating about many things and committing my thoughts in writing fulltime. As a writer and author given to much introspection and fascinated by human behavior, nature, and our universe it was important to me to simplify my life as much as possible as anyone given to philosophical speculation about many things must. That much of my writing covers some metaphysical thoughts about God, angels and demons, an afterlife and Biblical stories of origins, of prophecies of the End Times and so much more have been absorbing studies as well and I freely share my thoughts about these in this volume.

Organic Computing — A Paradigm Shift for Complex Systems - Christian Müller-Schloer 2011-04-29

Organic Computing has emerged as a challenging vision for future information processing systems. Its basis is the insight that we will increasingly be surrounded by and depend on large collections of autonomous systems, which are equipped with sensors and actuators, aware of their environment, communicating freely, and

organising themselves in order to perform actions and services required by the users. These networks of intelligent systems surrounding us open fascinating application areas and at the same time bear the problem of their controllability. Hence, we have to construct such systems as robust, safe, flexible, and trustworthy as possible. In particular, a strong orientation towards human needs as opposed to a pure implementation of the technologically possible seems absolutely central. The technical systems, which can achieve these goals will have to exhibit life-like or "organic" properties. "Organic Computing Systems" adapt dynamically to their current environmental conditions. In order to cope with unexpected or undesired events they are self-organising, self-configuring, self-optimising, self-healing, self-protecting, self-explaining, and context-aware, while offering complementary interfaces for higher-level directives with respect to the desired

behaviour. First steps towards adaptive and self-organising computer systems are being undertaken. Adaptivity, reconfigurability, emergence of new properties, and self-organisation are hot top-ics in a variety of research groups worldwide. This book summarises the results of a 6-year priority research program (SPP) of the German Research Foundation (DFG) addressing these fundamental challenges in the design of Organic Computing systems. It presents and discusses the theoretical foundations of Organic Computing, basic methods and tools, learning techniques used in this context, architectural patterns and many applications. The final outlook shows that in the mean-time Organic Computing ideas have spawned a variety of promising new projects.

Streetwise - Diego Gambetta
2005-06-30

A taxi driver's life is dangerous work. Picking up a bad customer can leave the driver in a vulnerable position, and erring even once can prove fatal. To protect themselves, taxi drivers must quickly and accurately assess the trustworthiness of complete strangers. In *Streetwise*, Diego Gambetta and Heather Hamill take this predicament as a prototypical example of many trust decisions, where people must act on limited information and judge another person's trustworthiness based on signs that may or may not be honest indicators of that person's character or intent. Gambetta and Hamill analyze the behavior of cabbies in two cities where driving a taxi is especially perilous: New York City, where drivers have been the targets of frequent and violent robberies, and Belfast, Northern Ireland, a divided metropolis where drivers have been swept up in the region's

sectarian violence. Based on in-depth ethnographic research, *Streetwise* lets drivers describe in their own words how they seek to determine the threat posed by each potential passenger. The drivers' decisions about whom to trust are treated in conjunction with the "sign-management" strategies of their prospective passengers—both genuine passengers who try to persuade drivers of their trustworthiness and the villains who mimic them. As the theory that guides this research suggests, drivers look for signs that correlate closely with trustworthiness but are difficult for an impostor to mimic. A smile, a business suit, or a skullcap alone do not reassure drivers, as any criminal could easily wear them. Only if attached to other signs—a middle-aged woman, a business address, or a synagogue—are they persuasive. Drivers are adept at deciphering deceitful signals, but trickery is occasionally undetectable, so they must adopt defensive

strategies to minimize their exposure to harm. In Belfast, where drivers are locals and often have histories of paramilitary involvement, "macho" posturing often serves to deter would-be criminals, while New York cabbies, mostly immigrants who view themselves as outsiders, try simply to minimize the damage from attacks by appeasing robbers and carrying only small amounts of cash. For most people, erring in a trust decision leads to a broken heart or a few dollars lost. For cab drivers, such an error could mean losing their lives. The way drivers negotiate these high stakes offers us vivid insight into how to determine another person's trustworthiness. Written with clarity and color, *Streetwise* invites the reader to ride shotgun with cabbies as they grapple with a question of relevance to us all: which signs of trustworthiness can we really trust? The Social and Cognitive Aspects of Normal and Atypical Language

Development - Stephen v. Tetzchner 2012-12-06

For some time now, the study of cognitive development has been far and away the most active discipline within developmental psychology. Although there would be much disagreement as to the exact proportion of papers published in developmental journals that could be considered cognitive, 50% seems like a conservative estimate. Hence, a series of scholarly books devoted to work in cognitive development is especially appropriate at this time. The Springer Series in Cognitive Development contains two basic types of books, namely, edited collections of original chapters by several authors, and original volumes written by one author or a small group of authors. The flagship for the Springer Series is a serial publication of the "advances" type, carrying

the subtitle Progress in Cognitive Development Research. Each volume in the Progress sequence is strongly thematic, in that it is limited to some well-defined domain of cognitive developmental research (e. g., logical and mathematical development, development of learning). All Progress volumes will be edited collections. Editors of such collections, upon consultation with the Series Editor, may elect to have their books published either as contributions to the Progress sequence or as separate volumes. All books written by one author or a small group of authors are being published as separate volumes within the series.

Korea's Pastimes and Customs - I-hwa Yi 2006

The book explores the favorite pastimes and customs of the Korean people under the 'Great Empire' from the late 14th century to 1910, when Korea was occupied by Japan. Some of the popular games discussed include Baduk (the Korean version of 'Go', a strategic

board game for two players), Janggi (the Korean version of chess) and Yutnori (a game played with four short sticks). The author also discusses games played by young boys (e.g. flying kites) and young girls (e.g. hide-and-peek), men (e.g. archery) and women (e.g. seesaw), and pastimes enjoyed by both sexes (e.g. tug of war). Lee examines the origin of family names and common people's obsession with genealogy during the Joseon dynasty. He also discusses the important ceremonies celebrating milestones in one's life as well as ceremonies associated with various holidays on the calendar. The last segment of the book is devoted to people's interest in fortune-telling. The author discusses behaviors that were considered taboo and the various ways people tried to predict their future.
