A Casual Revolution Jesper Juul 2012-02-10 How casual games like Guitar Hero, Bejeweled, and those for Nintendo Wii are expanding the audience for video games. We used to think that video games were mostly for young men, but with the success of the Nintendo Wii, and the proliferation of games in browsers, cell phone games, and social games video games changed fundamentally in the years from 2000 to 2010. These new casual games are now played by men and women, young and old. Players need not possess an intimate knowledge of video game history or devote weeks or months to play. At the same time, many players of casual games show a dedication and skill that is anything but casual. In *A Casual Revolution*, Jesper Juul describes this as a reinvention of video games, and of our image of video game players, and explores what this tells us about the players, the games, and their interaction. With this reinvention of video games, the game industry reconnects with a general audience. Many of today's casual game players once enjoyed Pac-Man, Tetris, and other early games, only to drop out when video games became more time-consuming and complex. Juul shows that it is only by understanding what a game requires of players, what players bring to a game, how the game industry works, and how video games have developed historically that we can understand what makes video games fun and why we choose to play (or not to play) them. Synchronicity, Science and Soul-Making Victor Mansfield 1995 The pioneering analysis of synchronicity was given by Jung, yet despite the concept's momentous significance in Jung's work, and despite the widespread dissemination of the term 'synchronicity' even within pop culture, synchronicity is often badly misconstrued and remains "perhaps the least understood of Jung's theories". Synchronicity, Science, and Soul-Making has already been hailed as the most important analysis of synchronicity since Jung himself.

Computers and the Collaborative Experience of Learning (1994) Charles Crook 2018-02-06 Originally published in 1994. Until this book was published, the application of computers to educational practice has received little input from psychological theory. *Computers and the Collaborative Experience of Learning* locates this topic within the contemporary movement of socio-cultural theory, drawing on the writing of Vygotsky and others. Charles Crook reviews psychological approaches to cognition and learning, in so far as they implicitly direct strategy in respect of computer-based learning. He also takes a novel stance in considering how new technology can enhance rather than undermine the social experience of learning and instruction, and can allow teachers to achieve more in the classroom. He argues that computers can provide the conditions for effective collaboration and enhance the social dimension of education. With its unique blend of theory and practice, from the primary school to university settings, *Computers and the Collaborative Experience of Learning* will be of interest to educational psychologists, as well as psychologists studying group processes, cognition and development.

the same page and succeed in your relationship. This book will even help couples that already have a good relationship. When we grow up, there is no relationship 101. We have to learn about relationships from watching our parents and their risky, trial-and-error approach. When we choose our partners, we are essentially taking a gamble that they are the one with whom we belong. By loving them we are gently placing our heart, mind, body, and soul in their hands. We can only hope that they will love and respect us enough to keep us safe from unnecessary heartache and stress. We can better prepare them for handling our emotions if we prepare ourselves for how we want to interact with our partner. This book will help you and your partner get on the same page in your relationship. These important topics in *Love Can Last* will help shift your perspective, so that each of you can take more responsibility for the way that your relationship works. Both partners have the power to steer the relationship clear of the pitfalls that lead straight to divorce. By reading *Love Can Last*, you will be able to incorporate key elements into your relationship that will help you get through tough times and strengthen the foundation of your relationship, making you stand stronger together for many years to come. By realizing that God is there for you both and to help keep others from interfering in your relationship, you will stand united in your quest to keep your partner happy. If you can forget about the concept that a relationship is 50-50 and give 100 percent to your partner, you will see a huge difference with how you treat each other.

Crossing Design Boundaries Paul Rodgers 2005-11-10 This book presents over 100 papers from the 3rd Engineering & Product Design Education International Conference dedicated to the subject of

exploring novel approaches in product design education. The theme of the book is "Crossing Design Boundaries" which reflects the editors' wish to incorporate many of the disciplines associated with, and integral to, modern product design and development pursuits. Crossing Design Boundaries covers, for example, the conjunction of anthropology and design, the psychology of design products, the application of soft computing in wearable products, and the utilisation of new media and design and how these can be best exploited within the current product design arena. The book includes discussions concerning product design education and the cross-over into other well established design disciplines such as interaction design, jewellery design, furniture design, and exhibition design which have been somewhat under represented in recent years. The book comprises a number of sections containing papers which cover highly topical and relevant issues including Design Curriculum Development, Interdisciplinarity, Design Collaboration and Team Working, Philosophies of Design Education, Design Knowledge, New Materials and New Technologies in Design, Design Communication, Industrial Collaborations and Working with Industry, Teaching and Learning Tools, and Design Theory.

Script Tease Eric Nicol 2010-05-05 Why write in the first place, other than your grocery list? Eric Nicol believes it's the second-most satisfying thing you can do lying down. But it's not enough to want to write. You must need to write. Now, after more than seventy years of scribbling - he wrote for the school newspaper at Lord Byng High School in Vancouver, British Columbia - Eric holds forth on dangling participles, punctuation, and literary jargon. What's more, he answers the burning question: "How much should creative writers depend on editors to correct their grammar?" Then Eric provides a wide selection of essays to demonstrate how it's done. These include a dramatic demonstration of the chutzpah of a big Tom wild turkey and its harem on a B.C. Gulf Island, the discovery that Eric's one-way-view window in the bathroom has been installed incorrectly, the trials and tribulations of computers and the creative process, and a riposte to the query, "Are nipples really necessary on guys?" Pure Nicol. Minted in Canada. Priceless!

Relationship Lee Thayer 2017-04-24 This book is about all of the kinds of relationships people can have. It is a very insightful book about how relationships emerge. But it is also about how indispensable they are to our ongoing sense of being who we are in the worlds we inhabit. We have relationships with various people. But we also have relationships with our possessions, with our pets, and with our pens and car keys. We have relationships with the foods we eat, the places we go, and the diversions we take. We have relationships with the news we attend to, the gossip we consume, and the places we are familiar with. We have relationships with our clothes, our lotions and potions, our grooming equipment, our computers and our snow shovels. Taken together, all of the relationships we have had, have today, and will have in the future attach us to our worlds in an admixture of pushes and pulls on our attention and our behavior. Metaphorically, it might visually

look much like an intricate circular spider web, with us individually stuck at the core. We use the singular relationship here because we want to explore what it is that all relationships have in common: relationship. Relationships are sticky. They are far easier to fall into than to escape from. They are often demanding, requiring our attention when we wanted to devote our attention elsewhere. The drama of misplaced keys or a balky computer can take over our lives. We have hopes for certain relationships. We can be disappointed in how they turn out. But most of the myriad relationships that affect our lives just sort of happen. If they don't serve our purposes as we think we deserve, we drop them. A piece of clothing that just doesn't look right in the light can be dropped. That's something you can't do with your own baby. You have a relationship with your body. If you're rich, you can get a remodeling job. If you're not, you may be stuck with the body you've got. Some relationships bring us down. Other relationships lift us up. In this book, you will learn how to create the kinds of relationships you need to get to where you want to go. The relationship you have with yourself is key. This book reveals to you how, if you get that right, most of the other relationships you live in, and by, will fall into place.

How to be a Quantitative Ecologist Jason Matthiopoulos 2011-04-12 Ecological research is becoming increasingly quantitative, yet students often opt out of courses in mathematics and statistics, unwittingly limiting their ability to carry out research in the future. This textbook provides a practical introduction to quantitative ecology for students and practitioners who have realised that they need this opportunity. The text is addressed to readers who haven't used mathematics since school, who were perhaps more confused than enlightened by their undergraduate lectures in statistics and who have never used a computer for much more than word processing and data entry. From this starting point, it slowly but surely instils an understanding of mathematics, statistics and programming, sufficient for initiating research in ecology. The book's practical value is enhanced by extensive use of biological examples and the computer language R for graphics, programming and data analysis. Key Features: Provides a complete introduction to mathematics statistics and computing for ecologists. Presents a wealth of ecological examples demonstrating the applied relevance of abstract mathematical concepts, showing how a little technique can go a long way in answering interesting ecological questions. Covers elementary topics, including the rules of algebra, logarithms, geometry, calculus, descriptive statistics, probability, hypothesis testing and linear regression. Explores more advanced topics including fractals, non-linear dynamical systems, likelihood and Bayesian estimation, generalised linear, mixed and additive models, and multivariate statistics. R boxes provide step-by-step recipes for implementing the graphical and numerical techniques outlined in each section. How to be a Quantitative Ecologist provides a comprehensive introduction to mathematics, statistics and computing and is the ideal textbook for late undergraduate and postgraduate courses in environmental biology. "With a book like this, there is no excuse for people to be afraid of maths, and to be ignorant of what it can do." —Professor Tim Benton, Faculty of Biological Sciences, University of Leeds, UK

Media Archaeology Erkki Huhtamo 2011-06-12 "Huhtamo and Parikka, from the first and second generations of media archaeology, have brought together the best writings from almost all of the best authors in the field. historical case studies, but also a methodology for the future of media studies as material and historical analysis. Media Archaeology is destined to be a key handbook for a new generation of media scholars." —Sean Cubitt, author of *The Cinema Effect* "Taken together, this excellent collection of essays by a wide range of scholars and practitioners demonstrates how the emerging field of media archaeology not only excavates the ways in which newer media work to remediate earlier forms and practices but also sketches out how older media help to premeditate new ones." —Richard Grusin, author of *Premediation: Affect and Mediality after 9/11* "In *Media Archaeology*, a constellation of interdisciplinary writers explore society's relationship with the technological imaginary through history, with fascinating essays on influencing machines, Freud as media theorist, interactive games from the 19th century to the present day, just to name a few. As an artist, my mind is set on fire by discussions of the marvelous inventions that never made it to the mainstream, such as optophonic poetry, Christopher Strachey's 1952 'Love letter generator' for the Manchester Mark II computer, and the 'Baby talkie.'" —Zoe Beloff, artist and editor of *The Coney Island Amateur Psychoanalytic Society and Its Circle* "A long-awaited synthesis addressing media archaeology in all of its epistemological complexity. With wide-ranging intellectual breath and creative insight, Huhtamo and Parikka bring together an eminent array of international scholars in film and media studies, literary criticism, and history of science in the spirit of making the discourse of the humanities legible to artist-intellectuals. This foundational volume enables a sophisticated understanding of reproducible audiovisual media culture as apparatus, historical form, and avant-garde space of play." —Peter J. Bloom, author of *French Colonial Documentary: Mythologies of Humanitarianism* "An essential read for everyone interested in the histories of media and art." —Oliver Grau, author of *MediaArtHistories* "Media archaeology is a wonderful new shadow field. If you are willing to step outside the glow of new media, this book's approaches can shift how you experience the objects and experiences that fill the new everyday of contemporary life. No one captures the beauty of studying new media in the shadow of older media implements and practices better than Erkki Huhtamo, the Finnish writer, curator, and scholar of media technology and design famous for his creative work as a preservationist and an interpreter of pre-cinematic technologies of visual display. He has teamed up here with Jussi Parikka, the Finnish scholar who has brought us an insect theory of media, to give us this long-awaited collection of essays in media archaeology. The surprise of the book is that the essays collectively bring forward a range of approaches to considering archaeological practice, giving us new ways to think about our embodied and subjective orientations to technologies and objects through the lens of the material remnants of practice, rather than offering a narrow definition of the field. The collection moves between computational machines and influencing machines, preservation and imagination, offering a range of ways to live the new everyday of media experience through the imaginary of archaeology." —Lisa Cartwright, co-author of *Practices of Looking: An Introduction to Visual Culture* "Where McLuhan's *Understanding Media* ends, *Media Archaeology* actually begins. Refusing the often futile search for the eternal laws of media, *Media Archaeology* does something more difficult and rare. It literally brings the history of media alive by drawing into presence the enigmatic, heterogeneous, unruly past of the media—its artifacts, machines, imaginaries, tactics, and games. What results is a fabulous cabinet of (media) memories: the imaginary moving with kinetic frenzy, histories of what happens when media collide in the electronic space of the virtual, and stories about those strange interstitial spaces between analogue and digital." —Arthur Kroker, author of *The Will to Technology and the Culture of Nihilism* "Rupturing the continuities and established values of traditional media history, this exciting and thought-provoking collection makes a significant contribution to our understanding of media culture, and demonstrates that the presence of the past in present-day media is central to the recognition and re-cognition that media archaeology promotes." —John Fullerton, editor of *Screen Culture: History and Textuality* "Here, at last, is a collection of essays that are a critical step to comprehending the history of our impulse to see ourselves in the machines we have made. This could be the beginning of 'Archaeology of Intention.'" —Bernie Lubell, artist "Huhtamo and Parikka's expertly curated collection is a kaleidoscopic tour of media archaeology, giving us forceful evidence

of that unruly domain's vitality while preserving its wonderful unpredictability. With this essential volume, countless new paths have been opened up for media and cultural historians." —Charles R. Acland, author of *Screen Traffic* "This brilliant collection of essays provides much needed material and historical grounding for our understanding of new media. At the same time, it animates that ground by recognizing the integral roles that imagination, embodiment, and even productive disturbance play in media historiography. Yet these essays constitute more than a collection of historical case studies; together, they transform the book's subject into its overall method. Media Archaeology performs media archaeology. Huhtamo and Parikka excavate the intellectual traditions and map the epistemological terrain of media archaeology itself, demonstrating that the field is ripe with possibilities not only for further historical examination, but also for imagining exciting new scholarly and creative futures." —Shannon Mattern, *The New School*

Which Reminds Me Duane Windemiller 2005-06 *In Which Reminds Me* Duane Windemiller paints a

picture of his spiritual pilgrimage from farm boy to college professor-through wars and tranquility-social struggles and personal victory-tears and laughter, to the sense of Jesus' words: "Well done, my good and faithful servant." The picture on the cover is of the author of this book-pastor of the Hampton Beach, NH, summer time chapel. The congregation calls him Windy and he calls himself Sacred Agent 007. The chapel, known as "The Singing Church," is unusual. The bulletin board invites all to "Come as You Are-Happy Hour 9:30." There is laughter and 150 to 200 voices singing gospel music to the beat of a rocking and rolling piano-enough to drown out the shrieking and splashing from the water slide next door. Being pastor of this chapel for twenty-four years caps the long and multi-faceted career of Doc Windy who invites you on a picturesque guided tour nearly ninety years long.

Technical Report 1987

The Essential Grandparent Lillian Carson 1997-04-01 Ready or not, you're a grandparent! How did you get here so fast? No one consults you about this new role. It is handed to you without your advice or consent. So now that you're here at this new stage of life, the question before you is, what are you going to make of it? This book will help you find your answer and assist you in developing a plan for your grandparenting. It will dispel the myths and "tell it like it is." You'll learn that other grandparents feel just as you do. It will guide you to become aware of the possibilities, encourage you to trust your intuition, and teach you how to set goals so that you can make the most of this essential role. Just as babies don't come with instructions for parents, they certainly don't come with instructions for grandparents! The joys of grandparenting are available to all. It's healthy for us, the older generation, to nurture the young. It is our natural task to influence the future in this way. There are no requirements for a grandparent to be of a certain color, educational level, lifestyle or economic class. However, just loving our children and grandchildren is not enough. The joy comes from our ingenuity, energy and determination to provide stability and purpose. It is ours for the doing.
