[Parkinsons's Disease 2](#) - 1978

Alcohol Problems and Aging - Edith Lisansky Gomberg 1998

The Reproductive Neuroendocrinology of Aging and Drug Abuse - Charles D. Barnes 1994-11-22

The communication between the hypothalamus, pituitary, and gonad is bi-directional, and alterations of the communication in the circuitry, as often occurs during aging and drug abuse, results in acyclicity, hypogonadism, and impotence. This important reference covers topics on the neuroendocrine control mechanisms governing the reproductive process in both males and females. It discusses the importance of the differentiation of the neuroendocrine brain during the developmental period for the normal reproductive process. It also summarizes the effects of prenatal drug abuse on the differentiation of the neuroendocrine brain development and how this alteration induces abnormalities in the reproduction process. This comprehensive volume compares the effects of various psychoactive drugs on the maintenance of reproduction and describes the changes in the reproductive neuroendocrine axis during aging.

Neuroendocrinology of Aging - Joseph Meites 2012-12-06

JOSEPH MEITES The idea that the endocrine system is involved in aging processes is as old as the beginnings of endocrinology. The first endocrine experiment related to aging was reported by Brown-Sequard, who is usually regarded as the "father of endocrinology." In 1889, at the age of 72 years, he reported that he had succeeded in rejuvenating himself by injections of testicular extracts from dogs and guinea pigs. Although the favorable effects observed may have been due mainly to the powers of suggestion, his reports created a considerable interest in endocrinology and its relation to aging, and eventually led to the use of estrogens for treating certain pre- and postmenopausal symptoms in women, and androgens for treating some symptoms in aging men. Up to about the 1960's, the relatively few studies on endocrine-aging relationships dealt mainly with changes in weight and histological appearance of endocrine organs in aging animals and human subjects, and included a limited number of measurements of endocrine function by bioassays and chemical (for steroids) procedures. Within these limitations, gerontological investigators were unable to establish any definite relationships between endocrine functions and aging processes, with the exception of the connection between reproductive decline and gonadal and pituitary activity.

Parkinsons's Disease 2 - 1978

Parkinson's Disease—II - C. E. Finch 1979-03-01

These Proceedings emanate from the Second Tarbox Parkinson's Disease Symposium held February 2-4, 1978, at the SouthPark Inn in Lubbock, Texas. The Symposium was sponsored by the Tarbox Parkinson's Disease Institute and the Department of Pharmacology and Therapeutics of the Texas Tech University School of Medicine at Lubbock. The First Symposium took place in October, 1976. The Second Tarbox Parkinson's Disease Symposium boldly brought together investigators at the cutting edge of aging and neuroendocrine research and attempted to relate them to Parkinson's disease. Credit for the concept must go to the Program Chairman, Dr. David E. Potter. Once the plan was conceived the organizers relied heavily on the advice of Dr. Caleb E. Finch, whose counsel in developing the program was invaluable. The final verdict on the success of this daring venture must await the outcome of the publication of this Volume.

Nevertheless, those in attendance could not fail but note the enthusiasm and excitement of the participants as their findings from the diverse disciplines of the neurological, aging, and endocrine sciences converged. This in itself is testimony that the Symposium accomplished some degree of success. The Tarbox Parkinson's Disease Institute was established in 1973 with funds appropriated by the State of Texas and is dedicated to research, patient care, and education in Parkinson's disease and related neurological disorders. The Institute is named after Mr.

[Animals, Aging, and the Aged](#) - Leo K. Bustad 1981-02-20

Animals, Aging, and the Aged was first published in 1981. Minnesota Archive Editions uses digital technology to make long-unavailable books once again accessible, and are published unaltered from the original University of Minnesota Press editions. This volume explores the significant contributions of animals to our understanding of aging, to improving geriatric medicine, and to providing companionship and assistance to the elderly. Leo L. Bustad discusses what can be learned from animal life-span studies about the process of aging, including the problems of cardiovascular disease, cancer, osteoporosis, and age-related mental conditions. The results of these studies suggest that changes in life-style—especially the diet—may modify the effects of chronic degenerative diseases. Other studies show that caring for a pet can contribute greatly to the health and well being of the elderly. Bustad surveys experiments using animals in therapy and he presents, for the first time, evaluative instruments for choosing the appropriate pet. Companion animals allow many elderly people to maintain their independence. Animals are also helpful as aids for those with visual, hearing, and physical impairments. An appendix lists agencies that train dogs as aids to the physically impaired. *Animals, Aging, and the Aged* is a thoughtful discussion of the physical, psychological, and social problems faced by the elderly, with emphasis on the ways that animals have contributed to the solution of some of those problems. As such, it will be useful for those involved in geriatric medicine and social work and in veterinary medicine and research. This book is volume 5 in the series Wesley W. Spink Lectures in Comparative Medicine.

The second volume in this long-running series presents the usual critical and intensive review chapters divided into five sections but also addresses particular topics of special interest, including drugs and their use, and misuse, among the aged; the nonmedication orientation to treatment of various disorders; the immune system; and clinical procedures in the management of urinary incontinence. As with all the volumes, the contributors represent an international array of leading experts.

Aging 2000: Our Health Care Destiny - Charles M. Gaitz 2012-12-06

The seventeenth annual symposium sponsored by the Texas Research Institute of Mental Sciences was held October 23-26, 1983, in Houston, Texas. The theme was Aging 2000: Our Health Care Destiny. This volume on biomedical aspects and a companion volume on psychosocial aspects include edited versions of the presentations by about 80 speakers. Their papers were directed at practitioners, researchers, and medical educators who will be active and productive in the year 2000, and we focused on those who would influence the evolution of care of elderly persons during the next 17 years. We chose topics that would be of particular interest to teachers and current planners in the disciplines concerned with delivery of health and social services. We believe that having a core of more qualified and better trained practitioners will help the population of aged persons achieve a higher level of physical and mental health, life satisfaction and happiness, to find better coping techniques and control of environmental stresses, and to attain personal and social goals. Our Goals While preparing for the symposium we knew that the status of the art in 1983 obviously would be the base from which we would work, but we asked our speakers to give priority to future planning and directions.
