**The Art of Social Enterprise** - Carl Frankel 2013-06-01

Mission driven--business as a vehicle for change. The current business-for-profit model rewards short-term thinking, narrow self-interest, and a social-and-environmental-costs-be-damned attitude. Social enterprise is an exciting, blended model driven by the desire to create positive change through entrepreneurial activities. *The Art of Social Enterprise* is a practical guide which supplies everything you need to know about the mechanics of social entrepreneurship including: Startup - envisioning and manifesting intention Strategic planning - balancing social and monetary value Maintaining an even keel despite the inevitable challenges associated with being an entrepreneur. This valuable resource also provides an unparalleled legal perspective to help you take advantage of established legal organizational forms, recent statutory creations, contract hybrids, certification programs and more. Aimed at emerging as well as established social entrepreneurs, for-profit leaders who want to introduce an element of social responsibility into their companies, and non-profit organizations who want to increase their stability by generating income, *The Art of Social Enterprise* is the definitive guide to doing well while doing good.

**Nanotechnology in Food Products** - Institute of Medicine 2009-10-21

In the food industry, scientists are exploring the potential of nanotechnology to enhance the flavor and other sensory characteristics of foods, introduce antibacterial nanostructures into food packaging and encapsulate and deliver nutrients directly into targeted tissues, among other applications. However, as with any new technology, along with the benefits, there is the potential for unanticipated adverse effects. There is still a great deal to learn about any health outcomes related to introducing nanosized materials into foods and food packaging materials. Developing nanotechnology into a safe, effective tool for use in food science and technology will require addressing these and other questions. Assuring consumer confidence will be equally important to the

success of this new emerging technology. The Institute of Medicine held a one-day workshop, summarized in this volume, to further explore the use of nanotechnology in food. Specifically, the workshop was organized around three primary topic areas: (1) the application of nanotechnology to food products; (2) the safety and efficacy of nanomaterials in food products; and (3) educating and informing consumers about the applications of nanotechnology to food products.
