Jealousy and Compersion in Close Relationships Ulrike Duma 2009-10 Diploma Thesis from the year 2009 in the subject Psychology - Developmental Psychology, grade: 1,3, Johannes Gutenberg University Mainz (Psychologisches Institut), language: English, abstract: Compersion designates empathy and happiness for the partner on a relationship level. Whereas most people can be happy for the partner in a new job which satisfies him/her much more than did the old one, or for the partner meeting a good friend, a lot of people would negate being happy for their own partner finding someone else to love - and doing it. Compersion is often described as the opposite of jealousy, with jealousy being a more common reaction to the partner meeting a new love. The term compersion has been discovered within the American polyamory movement which subscribes to a relationship orientation that includes several intimate, consensual, responsible, and long-term relationships in which all relationship partners know of one another and/or are familiar with each other. In our time, serial monogamy is the most common relationship practice. It includes exclusive relationship rights and agreements. It comes with the cost and benefits of letting the other partner be the "only one" until the next only one comes along or of cheating on the partner, if the love to someone else starts. Usually this new love is suppressed, because it is assumed that the old partners must part ways as soon as someone new comes along. Loving several people at a time is a taboo, which is why polyamorous people often face social marginalisation in everyday life, being treated prejudicially or ostracised. The relation between compersion and jealousy is an often discussed topic in the polyamorous community as every individual perceives it differently. Therefore, a lot of equally valid and parallel views exist. Some, for instance, have had the experience of compersion replacing jealousy, some see it as a reminder of some deeper propensity in themselves or of their relationship being out of balance.

**Partnerships in Birds : The Study of Monogamy** Jeffrey M. Black 1996-05-30 Some birds mate for life, while others have many partners. Why? In this book, fourteen classic studies of bird behaviour are brought together to compare the different partnership patterns from ecological and evolutionary perspectives. Often there is a battle of the sexes, as individual birds behave in the way that serves their best interests. Introductory and concluding chapters review the latest thinking on this fascinating subject. - ;Some birds mate for life, while others have many partners. In this book, fourteen studies are brought together to compare different partnership patterns from ecological and evolutionary perspectives. The subjects have been chosen to include the same species living in different habitats (Sparrowhawks) and at different population densities (Great Tits). There are comparisons between closely related species (Mute Swans and Bewick's Swans). The studies span the globe and the behavioural gradient, from Iceland's strictly monogamous Whooper Swans to Australia's sexually promiscuous Splendid Fairy-wrens. In all cases, sexual and social relationships strongly influence a bird's survival and breeding success. -
