Urinary Tract Infection Cure and Treatment Manual - Dr Betty King 2023-02-07

Urinary tract infection (UTI) is common in women and men. It is caused by bacteria that move from the urethra (urine canal) through the bladder and into the ureters (a tube that carries urine from the kidneys to the bladder).UTI can cause fever, fatigue, and feeling stuffed up. It can also lead to a UTI infection in the bladder (cystitis) or the kidney (pyelonephritis).UTI is most common in people over 50 years old and those with a weak immune system. It is also more common in people who have had a UTI before.UTI is treated with antibiotics. If a sexually transmitted infection causes a UTI (STI), antibiotic treatment will not cure the infection. Still, it will help prevent the infection's spread to other people.UTI is a severe infection that can lead to long-term problems if not treated correctly. Anyone can get a UTI, but it is more common in people who are elderly, have a

weakened immune system, or have a history of UTI. UTI is also more common in people who have sex with other people. Urinary tract infection (UTI) is an infection of the urinary tract, which is the system of organs and tissues that transports urine from the kidneys to the bladder. Infection with a UTI can cause urinary tract pain, discomfort, and a burning sensation when you urinate. If left untreated, a UTI can lead to more severe problems, such as kidney infection and even a UTI abscess. UTIs are very common, and they can occur at any age. But they are ubiquitous in women and are also more likely to occur in people with a history of UTIs. Bacteria usually cause UTIs, but viruses can also cause them. There are many ways to get a UTI.

Reproductive Tract Infections -

Adrienne Germain 2013-06-29

Reproductive tract infections (RTIs) have become a silent epidemic that is devastating women's lives. Each year, thousands of women die needlessly from the consequences of these infections, including cervical cancer, ectopic pregnancy, acute and chronic infections of the uterus and the fallopian tubes, and puerperal infections. For many women, this happens because they receive medical attention too late, if at all. The terrible irony of this tragedy is that early diagnosis and treatment for many RTIs do not require high-technology health care. For the hundreds of millions of women with chronic RTIs acquired from their sexual partners, life can become a living hell. Infection is a major cause of infertility, and it leads to scorn and rejection in many countries. These women may experience constant pain, have festering lesions of the genital tract, be at enhanced risk of secondary diseases, and endure social ostracism. The problems associated with RTIs have grown even greater in the past decade with the emergence of human immunodeficiency virus (HIV) and AIDS. Preexisting sexually transmitted disease, particularly when associated with genital tract ulcers, raises women's vulnerability to the transmission of HIV 3-5 fold.
