What we have learned from animals - Stuart Semple 2022-11-04

Did you know that we can learn things about ourselves (humans) and our behaviour without directly studying ourselves? Scientists have for years studied all kinds of animals, to gain a better insight into their strategies for survival, both alone and together. And we are now finding out that these studies can teach us a lot about us and our world - from ecosystem functioning, to behaviour, to health. This Collection examines what we have learned from animals, ranging from microscopic invertebrates to fish and mammals. We look in particular at what different animals can teach us about human behaviour, about how life has evolved and its diversity, and about how the ecosystem on our planet functions. We hope you enjoy reading about all the fascinating things we can learn from the animals we share our planet with!

Biology of Floral Scent - Natalia Dudareva 2006-03-27

As with nearly all living creatures, humans have always been attracted and intrigued by floral scents. Yet, while we have been manufacturing perfumes for at least 5000 years to serve a myriad of religious, sexual, and medicinal purposes, until very recently, the limitation of our olfactory faculty has greatly hindered our capacity to clearly and ob

Reproductive Biology and Phylogeny of Lizards and Tuatara - Justin L. Rheubert 2014-12-19
Reproductive Biology and Phylogeny of Lizards and Tuatara is a remarkable compendium of chapters written by the world's leading experts from over four continents. The book begins with a chapter recounting historical discoveries in reproductive biology and a review of phylogenetics and up-to-date hypotheses concerning evolutionary relationships among lizards. Following these chapters are detailed reviews with additional new data concerning chemical communication, sexual selection, reproductive cues, female reproductive anatomy, female reproductive cycles, oogenesis, parthenogenesis, male reproductive anatomy, male reproductive cycles, spermatogenesis, reproductive investment, viviparity and placentation, multiple paternity, and parental care. The book culminates in two chapters on tuatara reproduction giving unique insight into

evolutionary patterns in reproductive biology in squamates and tuatara. This is an essential resource for anyone studying reproduction in reptiles and/or vertebrates and offers a fascinating read for those interested in reproductive biology.

A Textbook of Animal Behaviour - Hoshang S. Gundevia | Hare Govind Singh 2009

This textbook is an introduction to the Science of Animal Behaviour Presently this subject is introduced in most of the Indian Universities in B.Sc. IIIrd year and Post-graduate classes.

The Handicap Principle - Amotz Zahavi 1999-06-03

Ever since Darwin, animal behavior has intrigued and perplexed human observers. The elaborate mating rituals, lavish decorative displays, complex songs, calls, dances and many other forms of animal signaling raise fascinating questions. To what degree can animals communicate within their own species and even between species? What evolutionary purpose do such communications serve? Perhaps most importantly, what can animal signaling tell us about our own non-verbal forms of communication? In The Handicap Principle, Amotz and Ashivag Zahavi offer a unifying theory that brilliantly explains many previously baffling aspects of animal signaling and holds up a mirror in which ordinary human behaviors take on surprising new significance. The wide-ranging implications of the Zahavis' new theory make it arguably the most important advance in animal behavior in decades. Based on 20 years of painstaking observation, the Handicap Principle illuminates an astonishing variety of signaling behaviors in animals ranging from ants and ameba to peacocks and gazelles. Essentially, the theory asserts that for animal signals to be effective they must be reliable, and to be reliable they must impose a cost, or handicap, on the signaler. When a gazelle sights a wolf, for instance, and jumps high into the air several times before fleeing, it is signaling, in a reliable way, that it is in tip-top condition, easily able to outrun the wolf. (A human parallel occurs in children's games of tag, where faster children will often taunt their pursuer before running). By momentarily handicapping itself--expending precious time and energy in this display--the gazelle underscores the truthfulness of its

by guest

signal. Such signaling, the authors suggest, serves the interests of both predator and prey, sparing each the exhaustion of a pointless chase. Similarly, the enormous cost a peacock incurs by carrying its elaborate and weighty tail-feathers, which interfere with food gathering, reliably communicates its value as a mate able to provide for its offspring. Perhaps the book's most important application of the Handicap Principle is to the evolutionary enigma of animal altruism. The authors convincingly demonstrate that when an animal acts altruistically, it handicaps itself--assumes a risk or endures a sacrifice--not primarily to benefit its kin or social group but to increase its own prestige within the group and thus signal its status as a partner or rival. Finally, the Zahavis' show how many forms of non-verbal communication among humans can also be explained by the Handicap Principle. Indeed, the authors suggest that non-verbal signals--tones of voice, facial expressions, body postures--are quite often more reliable indicators of our intentions than is language. Elegantly written, exhaustively researched, and consistently enlivened by equal measures of insight and example, *The Handicap Principle* illuminates virtually every kind of animal communication. It not only allows us to hear what animals are saying to each other--and to understand why they are saying it--but also to see the enormously important role non-verbal behavior plays in human communication.

Mathematics in Western Culture - Morris Kline 1953

This book gives a remarkably fine account of the influences mathematics has exerted on the development of philosophy, the physical sciences, religion, and the arts in Western life.

The Gross Science of Bad Smells - Carla Mooney 2018-07-15

The world is full of stinky smells, such as sweaty feet, dirty diapers, rotting food, and wet dogs. Some smells are so bad, they can make a person gag or run in the opposite direction. In this book, readers will examine what causes bad smells, why some objects smell more than others, and how smells travel. They will also explore how the nose and brain detect and recognize different smells. With high-interest content and special features that include a Myths and Facts and 10 Great Questions to Ask a Specialist sidebars, this

engrossing book will attract even hesitant readers.

The British Noctuae and Their Varieties - James William Tutt 1892

Chemical Ecology of Insects - William J. Bell 2013-11-27

Our objective in compiling a series of chapters on the chemical ecology of insects has been to delineate the major concepts of this discipline. The fine line between presenting a few topics in great detail or many topics in veneer has been carefully drawn, such that the book contains sufficient diversity to cover the field and a few topics in some depth. After the reader has penetrated the crust of what has been learned about chemical ecology of insects, the deficiencies in our understanding of this field should become evident. These deficiencies, to which no chapter topic is immune, indicate the youthful state of chemical ecology and the need for further investigations, especially those with potential for integrating elements that are presently isolated from each other. At the outset of this volume it becomes evident that, although we are beginning to decipher how receptor cells work, virtually nothing is known of how sensory information is coded to become relevant to the insect and to control the behavior of the insect. This problem is exacerbated by the state of our knowledge of how chemicals are distributed in nature, especially in complex habitats. And finally, we have been unable to understand the significance of orientation pathways of insects, in part because of the two previous problems: orientation seems to depend on patterns of distribution of chemicals, the coding of these patterns by the central nervous system, and the generation of motor output based on the resulting motor commands.

Bumblebee Economics - Bernd Heinrich 2004
The bumblebee spends its days gathering the resources needed by the hive -- honey for energy and pollen for protein. The author examines the intricate processes that make up this behavior, including discussions of thermoregulation and its behavioral application, and the way bumblebees choose flowers to harvest.

Breeding in Insects - M. Yadav 2003
Contents: Introduction, Reproductive Organs, Copulatory Organs, Development, Insect Metamorphosis, Morphological Changes during Metamorphic, Biochemical Changes during Metamorphosis, Development of Fruit Fly, Development Assets in Insects.

Partners and Parents - Michael Chinery 2000
Tropical rainforests cover only about 6% of the earth's surface, yet they are home to more than half the world's species. This book looks at the biology and behaviour of rainforest animals and people describing how they live together in harmony and balance and how vital they are to the wellbeing of the whole world. It is one of a series of books which aims to provide an understanding of the unique ecosystems of the rainforest. It describes the amazing plants and animals and how they interact, and addresses local and global environmental and conservation issues.

The British Noctuae and Their Varieties - Tutt 1892

The Evolutionary Biology of Human Female Sexuality - Randy Thornhill 2008-09-25
Research conducted in the last fifteen years has placed in question many of the traditional conclusions scholars have formed about human female sexuality. Though conventional wisdom asserts that women's estrus has been evolutionarily lost, Randy Thornhill and Steven W. Gangestad assert that it is present, though concealed. Women, they propose, therefore exhibit two sexualities each ovulatory cycle-estrus and sexuality outside of the estrous phase, extended sexuality-that possess distinct functions. Synthesizing research in behavioral evolution and comparative biology, the authors provide a new theoretical framework for understanding the evolution of human female sexuality, one that is rooted in female sexuality and phylogeny across all vertebrate animals.

The Solitary Bees - Bryan N. Danforth 2019-08-27
The most up-to-date and authoritative resource on the biology and evolution of solitary bees which draws on new research to provide a comprehensive and authoritative overview of solitary bee biology, offering an unparalleled look at these remarkable insects.

Pheromones for Men - Doctor Faith Ben 2019-02-04
Many men had experienced rejection because of the way that they have neglected to pull in the correct lady. A few ladies simply feel awful where these kind ofen are.Are you that Man that feel uninvolved, unwanted by that dream woman, or are you a married Man that feels uninvolved by your spouse?Regardless of whether you're married or in a decent relationship, despite everything you'll battle with sentiments of being disliked and undesirable. It's typical, in Light of the fact that even the best man on the planet can't fill the void - and neither can marriage, kids, a great profession, .or cash . that is the terrible news.Yet, pause, there's uplifting news !PHEROMONES PERFUME FOR MEN. This Makes You the Center of Attraction. It's been proven to attract women and appeal to their sexual receptor, smells amazing with it's powerful scent that is youthful and empoweringDr Faith Ben walks you through everything yiu need to know about PHEROMONES to GET THE BEST RESULT.GET HER ATTENTION NOW!BUY NOW

How to Date and Attract the Woman You Love: Meet Your Perfect Girl and Make Her Want You - Richard Harry 2013-08
So you want to be the special guy that almost every girl will find irresistible. You're fed up with the fact that you're having such a hard time trying to impress a girl only for you to end up rejected at the end of the day. Your main questions usually circles around what you have against what other guys have. Why is it so easy for other males to attract the opposite sex, but almost impossible when you do it? Even when you're trying your best, you realize that you're getting nowhere. Well, that's what this book is going to do for you. It's going to give you a makeover that begins in your mind. By the end of the book, you're going to be different and you're going to feel different from how you were

before. Best of all, you're going to like it and you wouldn't want to change back.
