The Sex Side of Life - Mary Ware Dennett 2022-11-13

The Sex Side of Life is a sex education pamphlet written by Mary Ware Dennett with a goal to educate her sons, because she was unable to find any adequate books on the subject. Many of the books on sex either contained inaccurate information or used fear and shame tactics to dissuade the youth from having sex. Therefore, she decided to write her own explanation using research and interviews with doctors. The pamphlet was twenty-four pages long. Dennett used scientific discussion of sex while also including the emotion side of sex relations. The pamphlet covered controversial topics including masturbation, sexually transmitted diseases, prostitution, and support for the use of birth control. Her views were considered radical for this time, because she was not promoting abstinence.

Sexual Biology and Reproduction in Crustaceans - Thanumalaya Subramoniam 2016-09-27

Sexual Biology and Reproduction in Crustaceans covers crustacean reproduction as it deals with the structural morphology of the gamete-producing primary sex organs, such as the testis and ovary, the formation and maturation of gametes, their fusion during fertilization, and embryonic development that lead to the release of larvae. Constituting a diverse assemblage of animals, crustaceans are best known by their common representatives, such as shrimps, lobsters, and crabs, but also include many more less familiar, but biologically important forms. This work covers the variety of ways in which both male and female gametes are produced by evolving different sexual systems in crustaceans, the range of reproductive systems, and the accordingly, and highly diverse, mechanistic modes of sex determination. In addition, the book features such topics as genetic and environmental determinants in sex determination pattern, variability of mechanisms of fertilization among different species, the origin of different mating systems, the associated mating and brooding behaviors, and the adaptive ability to different environmental conditions with discussion on the evolutionary ecology of social and sexual systems in certain species, which have shown eusocial tendencies, similar to social insects. Marine species occupying diversified ecological niches in tropical and temperate zones reproduce under definitive environmental conditions. Therefore, reproductive ecology of different crustaceans inhabiting different ecological niches also constitutes another important aspect of the work, along with yolk utilization and embryogenesis leading to release of different larval forms, which reflect on their aquatic adaptability. Forms a valuable source of recent references on the current research in crustacean reproductive physiology Covers various mating and breeding systems, providing illustrative examples for sexual selection, parental care of developing eggs and embryos, and the evolution of other reproductive behaviors Features contributions written in the form of review articles, enabling readers to not only gain information in the respective subject, but also help them stimulate ideas in their chosen field of research Includes a glossary created by the author to define technical terms Demonstrates the ability of crustacean species to serve as useful model systems for other organisms, to investigate issues related to sexual conflict, mate choice, and sperm competition Discusses techniques in endocrine research to help researchers in aquaculture develop protocols in the control of reproduction

Urogenital System - Vishram Singh 2014-11-10

Urogenital System Urogenital System

Keeping Fit - United States. Public Health Service 1920

Your Mysterious Glands - Herman Harold Rubin 1925

The Endocrine and Reproductive Systems - Melissa Kim 2003

Each book gives an excellent breakdown and description of all of the body parts, organs, glands, and fluids that are involved in that particular system and how everything ties together. These titles explain the body systems in a way that kids can understand and tie in to aspects of their own lives. Full-color and thorough illustrations complement the clearly

presented biology of the human body. A focus on health and wellness rounds off the package. Titles include chapter notes, a further reading list, for more information, Internet addresses, a glossary, and an index. This exploration of the endocrine and reproductive systems focuses on both the science and health issues. Author Susan Dudley Gold provides an in-depth look at what each system is, the organs and glands involved, and how each system works. She also discusses the way the systems work together and the variations based on gender. Ways keep yourself and your body healthy and amazing facts about the endocrine and reproductive system are also included.

Exploring the Biological Contributions to Human Health - Institute of Medicine 2001-07-02

It's obvious why only men develop prostate cancer and why only women get ovarian cancer. But it is not obvious why women are more likely to recover language ability after a stroke than men or why women are more apt to develop autoimmune diseases such as lupus. Sex differences in health throughout the lifespan have been documented. Exploring the Biological Contributions to Human Health begins to snap the pieces of the puzzle into place so that this knowledge can be used to improve health for both sexes. From behavior and cognition to metabolism and response to chemicals and infectious organisms, this book explores the health impact of sex (being male or female, according to reproductive organs and chromosomes) and gender (one's sense of self as male or female in society). Exploring the Biological Contributions to Human Health discusses basic biochemical differences in the cells of males and females and health variability between the sexes from conception throughout life. The book identifies key research needs and opportunities and addresses barriers to research. Exploring the Biological Contributions to Human Health will be important to health policy makers, basic, applied, and clinical researchers, educators, providers, and journalists-while being very accessible to interested lay readers.

The Male Sexual Machine - Kenneth Purvis 2002-10

Everything men (and women) should know about male sexual equipment - what it does, how it works and how to keep it healthy.

Sexual Adjustment in Marriage - Henry Olsen 2023-07-05

In the 1950s sexual instruction was still a considerable problem despite the very great freedom of discussion that was common. The high level of so-called sexual neurosis among women, the problems of sexual compatibility and birth control, and the spread of venereal disease all bore witness to the need for responsible information. Originally published in 1954, Dr Henry Olsen, in this comprehensive survey of the problems of sexual adjustment, draws fully from a very wide and thoroughly grounded experience. Since 1937, he had been closely connected with the instruction in sexual hygiene in Denmark, where the majority of public schools and high schools included it as part of the syllabus. Of the 1,232 public libraries at the time all but three had copies of his Textbook on Sexual Hygiene. *Sexual Adjustment in Marriage* is admirably clear in style and arrangement. It is divided into subjects of particular importance such as The Sex Organs; Living Together; Disturbances in a Couple's Sex Life; Sex Life of the Unmarried; Fertilization, Pregnancy and Childbirth; Sexual Abnormalities; Diseases of Sex Life. Each of the sixteen main sections is divided into chapters, within which every topic discussed is numbered. Reference to any part of the book is thus extremely simple. Knowledge alone cannot prevent all disasters in the difficult field of sexual life. But this book aimed to give all that one needed for a basic understanding of the elementary laws - from the genes and chromosomes of one's own make-up to the sex education of one's children. Today it can be read and enjoyed in its historical context. This book is a re-issue originally published in 1954. The language used and views portrayed are a reflection of its era and no offence is meant by the Publishers to any reader by this re-publication.

Gonads - Kenneth W. McKerns 1969

The Endocrine System - Alvin Silverstein 1971

Describes the various glands of the body and the functions of the hormones they secrete. Also discusses hormones in plants and other animals.

The Reproductive System - 1972

Learning About the Endocrine and Reproductive Systems - Melissa L. Kim 2013-01-01

The endocrine system is essential to human life. It enables a person to grow, respond to change and stress, and helps turn food into energy. The reproductive system has one crucial task: that of making the next generation of people. Readers learn how these two remarkable systems work together to ensure survival of the human race.

Keeping Fit - 1934

The Sex Side of Life: An Explanation for Young People - Mary Ware Dennett 2022-08-01

DigiCat Publishing presents to you this special edition of "The Sex Side of Life: An Explanation for Young People" by Mary Ware Dennett. DigiCat Publishing considers every written word to be a legacy of humankind. Every DigiCat book has been carefully reproduced for republishing in a new modern format. The books are available in print, as well as ebooks. DigiCat hopes you will treat this work with the acknowledgment and passion it deserves as a classic of world literature.

Molecular Diseases 5 - Dr Sami a Almudhaffar Prof 2018-07-12

The control systems in the body of the animal and human being represented by endocrinology and nervous system, and the growth processes in the animal are under the endocrine glands beside that the changes are largely under the control of the glands despite the fact that hormonal control are slow in their work, compared with the rapid neurological control. The endocrine system control many functions such as growth, reproduction, metabolism as well as regulation of the b internal temperature and others, such as secretion an chemicals from endocrine cells in small quantities up to pico grams, that called hormones and accomplish specialized task in other cells "target cells". Hormones being known as chemical messengers, that perform important roles in the control of the vital actions that occur in living organisms and excreted in mammals by endocrine glands to move to various parts of the body by the blood. The hormones are divided in mammals to three groups, the first group contains peptide hormones that include the hypothalamus and pituitary as well as insulin and glucagon. The second group is called steroidal hormones, which includes hormones of the adrenal cortex and the sex glands, such as androgens and estrogens and the third group include amino derivative hormones such as adrenaline and hormones of the thyroid hormones. The hormones are synthesized in endocrine gland , which has no channels "Ductless". It can

be defined as chemicals that appear as a result of its composition in the endocrine gland of the human body excreted directly into the blood and transported to other organs of the body by the blood streams directly affecting the effectiveness of the body's life. This definition could be applied to non-hormonal substances such as carbon dioxide, which can be transferred to various organs of the body during breathing and neurological process such as acetyl choline ,synthesized by the nerve tissue and transported to other locations in the body. It is possible to have a precise definition of the hormone to be represented (the chemicals that make up a very small quantities, which is organizing various biochemical reactions to configure the appropriate quantities of various substances in accordance with the body's need). Accordingly the following are characteristics of hormones, several hormones control reproduction, which is a complex physiological phenomena, including:- Steroidal sex hormones "Sex Gonads" which is produced by the gonads.- Hormones that stimulate the Follicles such as Follicle stimulating hormone (FSH)" that control the biosynthesis steroidal hormones as well as sex cells.- Stimulating hormone of yellow body "Lutenizing hormone (LH)" and this hormone also controls the steroidal hormones ,sexual cells and ovulation.- The "Prolactin" The pituitary gland produce (LH, FSH, and prolactin). There are other hormones that regulate hormones of the anterior lobe of the pituitary gland which is called Gn- RH and hormone secretion inhibitor for Prolactin wich is secreted (PIH, PRH) by the hypothalamus region .- Recent studies have revealed that hormones, hormone agonists, hormone antagonists provide beneficial and sometime dramatic results in cancer treatment and chemoprevention. In many cases they provide similar therapeutic results and can replace the conventional cancer therapies (chemotherapy, surgical therapy and radiation therapy) thus becoming new adjuvant systemic therapy for cancer .Progestational agents and estrogen antagonists such as tamoxifen have been used either single or in combination with cytotoxic chemotherapy in patient with advanced disease . Some patients with epithelial ovarian tumors have had response to endocrine therapy although it appears that the overall response rate is 10%.The trials using flutamide which is antiandrogen drug, these trials suggest that flutamide does not have activity against ovarian cancer

Sex, Sperm, & Std's - Rajasingam S. Jeyendran 2006-02

Explains for adolescent boys what happens during puberty, discusses male reproductive anatomy and sexual response, and presents information on birth control and sexually transmitted diseases.
