### Care That Works - Jitka M. Zgola 1999-04-23

In her widely acclaimed *Doing Things*, Jitka M. Zgola offered practical and much-needed advice for those caring for persons with Alzheimer disease. Now, in *Care That Works*, Zgola shows how caregivers can better meet the demanding challenges of their job by building and improving their personal relationships with those in their care. Instead of simply prescribing approaches, *Care That Works* gives caregivers the information with which they can develop their own approaches, evaluate their effectiveness, and continue

to grow in skill and insight. Zgola explains that optimal dementia care involves three elements: a good relationship between the caregiver and the person who has dementia, a safe and nurturing environment, and meaningful activities. Evident throughout the book is Zgola's gift for compassionately portraying the difficulties faced by people with dementia and then suggesting ways to act in a manner that accords such people the respect and dignity they deserve. Topics that receive special attention include communicating with persons who have language deficits and coping with problem behaviors—two critical problems in

dementia care.

*The Person with Alzheimer's Disease* - Phyllis Braudy Harris 2002-06-06

The first book to provide a comprehensive look at what it's like to have dementia and the subjective experience of living with progressive memory loss. Few families are untouched by Alzheimer's disease or a related dementia. Moving accounts of what it is like to care for someone with this disease have already been published, as well as how-to books that offer caregivers advice and information on coping. But this book is the first to provide a comprehensive report of what it is like to have dementia oneself—the subjective experience of living with progressive memory loss. Each chapter discusses a different aspect of having dementia, from the initial assessment and diagnosis through placement in a nursing home. The discussions are grounded in qualitative research and case studies, which convey the variable and personal nature of the experience. They seek to help clinicians, researchers, students, and caregivers (both professionals and family members) understand the experience of dementia, and thereby to promote better caregiving through a person-centered approach. End of Life Care for People with Dementia - Murna Downs 2016-11-21

People with dementia need increasingly specialised support as they approach the end of life, and so too do their families and the professionals working with them. This book describes not only what can be done to ensure maximum quality of life for those in the final stages of the illness, but also how best to support those involved in caring for them. Emphasising the importance of being attuned to the experiences and needs of the person with dementia, the authors explain why and how they should be included in decisions relating to

their end of life care. Practical strategies for ensuring physical and emotional wellbeing are provided, drawing on useful examples from practice and providing solutions to potential challenges that carers and family members will face. Dilemmas surrounding end of life care are explored in detail, including the moral dilemma of medical intervention, and the authors suggest ways of supporting family members through the process in terms of providing information, helping them adjust to change and loss, and involving them in their relative's care, and at how care staff can be supported through appropriate education and training, team building and information-giving. This is an essential resource for anyone who wishes to provide compassionate, person-centred care for a person with dementia as they approach the end of life, including care staff, nurses, social workers and related professionals.

*Doing Relationship-Centred Dementia Care* - David I. J. Reid 2021-02-18

Sharing and evaluating a series of relationship-centred approaches to dementia care, this book enables practitioners to have hands-on involvement in improving the quality of this care. Fostering a critical approach to our understanding of how we do relationship-centred dementia care, Reid shows how experiences of living with dementia, family awareness of dementia, professional knowledge of providing dementia care, and the health, social care and housing system are linked, and how good dementia care arises from the relationships between these groups. The book encourages thinking about the stigma attached to dementia, and how a focus on living well with dementia helps shape policies about people with dementia, with their voices included. Practical steps for carrying out relationship-centred dementia care are also explained, with examples of common obstacles and how to overcome them.

*Dementia, 4th Edition* - David Ames 2010-11-26

**Risk Assessment and Management for Living Well with Dementia** - John Keady 2011-08-15

Risk is central to professional practice, assessment and decision-making in dementia care. Yet theories of risk are often complex and difficult to translate into everyday practice. This book outlines some of the key issues in risk perception, assessment and management in dementia care in a way that is both practical and accessible to a wide range of practitioners. It develops an approach to risk that promotes choice for people with dementia whilst also acknowledging the complex challenges care providers face. The authors provide an overview of the legislative framework currently in place, and of the ethical dilemmas which may emerge in practice. Frameworks for informed and balanced decision-making are offered, and the importance of

including the person with dementia, their family, and care providers in decision-making is emphasised. Throughout the book, case studies are used to illustrate effective negotiation and practical solutions to risk dilemmas in practice. This book highlights principles of good practice for managing risk in dementia care, and presents a rounded approach that will help practitioners negotiate some of the complex issues this entails.

**Continuing Selfhood in Alzheimer's Disease** - Ronda L. Parrish 2014

By the year 2050, it is predicted that over eleven million people in the United States will be affected by Alzheimer's disease. Attitudes regarding the quality of life of those with Alzheimer's disease have been slow to change. The belief that Selfhood does continue throughout the course of Alzheimer's disease needs to be an idea that is associated with Alzheimer's disease. In order to create an attitude change, quality relationships between care recipients, family members, caregivers, and healthcare professionals need to be the focus of dementia care. Research indicates that a more meaningful life for care recipients results from relationship care approaches in dementia care. This thesis examines several examples of the benefits of relationship care on the retention of selfhood in Alzheimer's disease. A partnership care approach for dementia care in smaller care environments is presented. This care approach creates care teams that include the care recipient as an equal partner in order to continue and to deepen relationships with others throughout his or her journey with Alzheimer's disease.

EBOOK: Partnerships In Family Care - Mike Nolan 2003-08-16

\* What are the key features of partnerships between family and professional carers? \* How do partnerships change over time? \* What is needed to help create the best working partnerships? Forging partnerships between service users, family carers and service providers is a key theme in both the policy and academic literatures. However, what such partnerships mean and how they can be created and sustained while responding to change over time, is far from clear. This book considers how family and professional carers can work together more effectively in order to provide the highest quality of care to people who need support in order to remain in their own homes. It adopts a temporal perspective looking at key transitions in caregiving and suggests the most appropriate types of help at particular points in time. It draws on both empirical and theoretical sources emerging from several countries and relating to a number of differing caregiving contexts in order to illustrate the essential elements of 'relationship-centred' care. Partnerships in Family Care will be important reading for all health care students and professionals with an interest in community and home care for the ill, disabled, and elderly.

Wellbeing in Dementia - Tessa Perrin 2008-06-27

The authors, specialists in the UK, draw on developmental theory to propose a model of practice specifically for dementia care. The number of people who suffer from dementia is increasing and in consequence the problems it presents are affecting a growing number of therapists and carers. Many of these problems are peculiar to dementia and the models of care used with other client groups have proved inadequate when dealing with the provision of quality of care to people who have dementia. This revised edition contains a new opening chapter which brings our understanding of dementia up-to-date. The book looks at the relationship between occupation, wellbeing and dementia and examines the critical role of the carer in developing therapeutic interventions. Proposes a realistic model of practice for dementia care which centres on the unique occupational potential of the person with dementia. Offers positive strategies to improve wellbeing. Current information on assessment tools. Written by therapists with extensive experience in working with this client group.

*Contented Dementia* - Oliver James 2009-11-24

Dementia is a little understood and currently incurable illness, but much can be done to maximise the quality of life for people with the condition. *Contented Dementia* - by clinical psychologist and bestselling author Oliver James - outlines a groundbreaking and practical method for managing dementia that will allow both sufferer and carer to maintain the highest possible quality of life, throughout every stage of the illness. A person with dementia will experience random and increasingly frequent memory blanks relating to recent events. Feelings, however, remain intact, as do memories of past events and both can be used in a special way to substitute for more recent information that has been lost. The SPECAL method (Specialized Early Care for Alzheimer's) outlined in this book works by creating links between past memories and the routine activities of daily life in the present. Drawing on real-life examples and user-friendly tried-and-tested methods, *Contented Dementia* provides essential information and guidance for carers, relatives and professionals.

**Caring for People with Dementia** - Christine Brown Wilson 2017-03-27

Skills in caring for people with dementia are increasingly demanded of all health care practitioners as the numbers of diagnosed increase. This text presents the latest research into improving dementia care for both non-expert students and junior staff as well as more senior managers.

**Hearing the Person with Dementia** - Bernie McCarthy 2011-07-15

Losing the ability to communicate can be a frustrating and difficult experience for people with dementia, their families and carers. As the disease progresses, the person with dementia may find it increasingly difficult to express themselves clearly, and to understand what others say. Written with both family and professional carers in mind, this book clearly explains what happens to communication as dementia progresses, how this may affect an individual's memory, language and senses, and how carers might need to adapt their approach as a result. Advocating a person-centred approach to dementia care, the author describes methods of verbal and non-verbal communication, techniques for communicating with people who can not speak or move easily, and strategies for communicating more effectively in specific day-to-day situations, including at mealtimes, whilst helping the person with dementia to bathe or dress, and whilst out and about. Exercises at the end of each chapter encourage the carer to reflect on their learning and apply it to their own circumstances, and guidelines for creating a life story with the person with dementia as a means of promoting good communication are also included. This concise, practical book is essential reading for family caregivers, professional care staff, and all those who work with, or who are training to work with, people with dementia.

*Dementia Care* - Grahame Smith 2018-09-03

Dementia is both a personal and a societal challenge. The goal of *Dementia Care: A Practical Approach* is to focus on how practitioners can meet this challenge with hope and compassion, thereby enabling those with dementia to live well. The book takes a 'strengths approach' with an emphasis on exploring sustainable strategies. Its content is underpinned by relevant policies and strategies and explicitly links to research evidence while always valuing the voices of those living with dementia. Covering various dementia strategies, the book provides a clear vision of dementia care delivery and is mapped to the Curriculum for UK Dementia Education. For health care students, the content is also mapped to the requirements of the Health and Care Professions Council and the Nursing and Midwifery Council. The book includes experiences of people living with dementia, practical examples, self-assessment questions, and key point summaries. It is a valuable resource to practitioners, informal caregivers, families, individuals with dementia or those wanting to know more about the subject.
