

Gateway To The Mind

Felix Deutsch

The Mind Gateway Lucy Mambu,2020-05-29 Life is a battleground. Every single one of us will face difficult times. It is war! And the war is intense. Challenges and hurdles are part of everyday life. Problems and difficulties are companions of every human being. It is a fact that, as long as we are walking through this journey called life, we are bound to face challenges and fight battles. It is the fight to win the battles, overcome the challenges and crossover the obstacles that leave us journeying through life with a dysfunctional and skewed mindset. When we encounter painful experiences, the pain sinks deep into the brain. When this happens, the painful memories outweigh the happy memories in the vortex of the mind. This book is written to help you know that through the transformation of the mind, you have the power in your hands to turn your circumstances around for your good. It's all in the mind and our mindset is everything. Our brains are programmed to think in a certain way and we as human beings have the power to reprogram our mind to think the way we want it to think, break out of mental imprisonment, win the battles of the mind and ultimately become success conscious.

The Mind Gateway Lucy Mambu,2017-05-18 THE MIND...Man's greatest asset. The Mind Gateway is primarily written with personal testimonies included to empower and encourage the masses to master the mind in order to master life as a whole to live a purposeful, fulfilled life as predestined by God.

Infinite Mindfield Anthony Peake,2013-10-03 For thousands of years, voyagers of inner space spiritual seekers, shamans and mystics have returned from their inner travels reporting another level of reality that is more real than the one we inhabit in waking life. Others have claimed that under the influence of mysterious substances, known as entheogens, the everyday human mind can be given glimpses of this multidimensional realm of existence. Using information from the cutting edge of modern science, Peake presents a startling new hypothesis that these 'inner worlds' are as real, or possibly even more real, than the 'reality' we experience in waking life. As his starting point, Peake examines the widespread historical belief that the mid-brain's pine-cone shaped pineal gland activates the 'third eye' described by mystics and seers. Through careful analysis of ancient religious texts and artifacts, he gives evidence that the spiritual properties of the pineal gland have been embedded in myths and cultures across the globe. (Why else would the Buddha so often be found wearing a pine cone hat?) Peake then shows that it is through this small organ that we experience lucid dreaming, out-of-body experiences, hypnagogic imagery, near-death experiences, astral travel and the kundalini experience. The book ends with the mind-

blowing conclusion that all living beings are one unitary consciousness experiencing itself subjectively.

The Other Mind's Eye Allen Sargent,1999 At Last! A User's Manual for both sides of your Brain! Sargent's book offers a revolution in brain research, identifying and describing a second mind's eye - and provides the tools to access it. Visualization is the key to identifying and then getting what you want in your life. Sargent's discovery allows us to see our lives from both sides of the brain. Accessing this second hemisphere opens doors that we didn't even know existed - until now. Written in a workshop format, the book takes readers through a step-by-step process to create dramatic and lasting changes. These extend to areas of education/learning, personal goals, health and wellness, leadership, and relationships. With the information available from both hemispheres of the brain, readers can achieve greater congruence, align their actions and their goals, release unwanted habits, and unhook from people who push their buttons. Manifest your dreams!

Body, mind, and the sensory gateway Felix Deutsch,1962

From Neurons to Self-consciousness Bernard Korzeniewski,2011 In the end, the author suggests that as more is learned about the working of the brain, philosophical problems that have caused centuries of speculation will simply be resolved by the facts of neurophysiology. --Book Jacket.

Image, Language, Brain Alec Marantz,Yasushi Miyashita,Wayne O'Neil,Wayne A. O'Neil,2000 The papers in this volume discuss the current status of the cognitive/neuroscience synthesis in research on vision, whether and how linguistics and neuroscience can be integrated, and how integrative brain mechanisms can be studied through the use of noninvasive brain-imaging techniques. Recent attempts to unify linguistic theory and brain science have grown out of recognition that a proper understanding of language in the brain must reflect the steady advances in linguistic theory of the last forty years. The first Mind Articulation Project Symposium addressed two main questions: How can the understanding of language from linguistic research be transformed through the study of the biological basis of language? And how can our understanding of the brain be transformed through this same research? The best model so far of such mutual constraint is research on vision. Indeed, the two long-term goals of the Project are to make linguistics and brain science mutually constraining in the way that has been attempted in the study of the visual system and to formulate a cognitive theory that more strongly constrains visual neuroscience. The papers in this volume discuss the current status of the cognitive/neuroscience synthesis in research on vision, whether and how linguistics and neuroscience can be integrated, and how integrative brain mechanisms can be studied through the use of noninvasive brain-imaging techniques. Analysis and Assessment of Gateway Process The Us Army,1983 You are not thinking, you are merely being logical. -

Niels Bohr, Danish physicist and Nobel Laureate Analysis and Assessment of Gateway Process is a document prepared in 1983 by the US Army. This document was declassified by the CIA in 2003. This brief report focuses on the so-called Gateway Experience, a training program originally designed by the Monroe Institute, a Virginia-based institute for the study of human consciousness. The Gateway experience uses sound tapes to manipulate brainwaves with a goal of creating an altered state of consciousness, which includes out-of-body experiences, energy healing, remote viewing, and time travel. The report concluded that the Gateway Experience is 'plausible' in terms of physical science, and that while more research was needed, it could have practical uses in US intelligence. Students of US intelligence, and anyone interested in the cross-roads between consciousness and reality will find this report fascinating reading.

The Spider's Thread Keith J. Holyoak, 2024-03-12 An examination of metaphor in poetry as a microcosm of the human imagination—a way to understand the mechanisms of creativity. In *The Spider's Thread*, Keith Holyoak looks at metaphor as a microcosm of the creative imagination. Holyoak, a psychologist and poet, draws on the perspectives of thinkers from the humanities—poets, philosophers, and critics—and from the sciences—psychologists, neuroscientists, linguists, and computer scientists. He begins each chapter with a poem—by poets including Samuel Taylor Coleridge, Sylvia Plath, Walt Whitman, Emily Dickinson, Robert Frost, Theodore Roethke, Du Fu, William Butler Yeats, and Pablo Neruda—and then widens the discussion to broader notions of metaphor and mind. Holyoak uses Whitman's poem “A Noiseless Patient Spider” to illustrate the process of interpreting a poem, and explains the relevance of two psychological mechanisms, analogy and conceptual combination, to metaphor. He outlines ideas first sketched by Coleridge—who called poetry “the best words in their best order”—and links them to modern research on the interplay between cognition and emotion, controlled and associative thinking, memory and creativity. Building on Emily Dickinson's declaration “the brain is wider than the sky,” Holyoak suggests that the control and default networks in the brain may combine to support creativity. He also considers, among other things, the interplay of sound and meaning in poetry; symbolism in the work of Yeats, Jung, and others; indirect communication in poems; the mixture of active and passive processes in creativity; and whether artificial intelligence could ever achieve poetic authenticity. Guided by Holyoak, we can begin to trace the outlines of creativity through the mechanisms of metaphor.

Mind Design II John Haugeland, 1997-03-06 Mind design is the endeavor to understand mind (thinking, intellect) in terms of its design (how it is built, how it works). Unlike traditional empirical psychology, it is more oriented toward the how than the what. An experiment in mind design is more likely to be an attempt to build something and make it work—as in artificial intelligence—than to observe or analyze what already exists. Mind design is psychology by reverse engineering. When *Mind Design* was first published in 1981, it became a classic in the then-nascent fields of cognitive science and AI. This second edition retains four landmark essays from the first, adding to them one earlier milestone (Turing's *Computing Machinery and*

Intelligence) and eleven more recent articles about connectionism, dynamical systems, and symbolic versus nonsymbolic models. The contributors are divided about evenly between philosophers and scientists. Yet all are philosophical in that they address fundamental issues and concepts; and all are scientific in that they are technically sophisticated and concerned with concrete empirical research. Contributors Rodney A. Brooks, Paul M. Churchland, Andy Clark, Daniel C. Dennett, Hubert L. Dreyfus, Jerry A. Fodor, Joseph Garon, John Haugeland, Marvin Minsky, Allen Newell, Zenon W. Pylyshyn, William Ramsey, Jay F. Rosenberg, David E. Rumelhart, John R. Searle, Herbert A. Simon, Paul Smolensky, Stephen Stich, A.M. Turing, Timothy van Gelder

How Things Shape the Mind Lambros Malafouris, 2016-02-12 An account of the different ways in which things have become cognitive extensions of the human body, from prehistory to the present. An increasingly influential school of thought in cognitive science views the mind as embodied, extended, and distributed rather than brain-bound or “all in the head.” This shift in perspective raises important questions about the relationship between cognition and material culture, posing major challenges for philosophy, cognitive science, archaeology, and anthropology. In *How Things Shape the Mind*, Lambros Malafouris proposes a cross-disciplinary analytical framework for investigating the ways in which things have become cognitive extensions of the human body. Using a variety of examples and case studies, he considers how those ways might have changed from earliest prehistory to the present. Malafouris's Material Engagement Theory definitively adds materiality—the world of things, artifacts, and material signs—into the cognitive equation. His account not only questions conventional intuitions about the boundaries and location of the human mind but also suggests that we rethink classical archaeological assumptions about human cognitive evolution.

Vision and Mind Alva Noë, Evan Thompson, 2002-10-25 The philosophy of perception is a microcosm of the metaphysics of mind. Its central problems—What is perception? What is the nature of perceptual consciousness? How can one fit an account of perceptual experience into a broader account of the nature of the mind and the world?—are at the heart of metaphysics. Rather than try to cover all of the many strands in the philosophy of perception, this book focuses on a particular orthodoxy about the nature of visual perception. The central problem for visual science has been to explain how the brain bridges the gap between what is given to the visual system and what is actually experienced by the perceiver. The orthodox view of perception is that it is a process whereby the brain, or a dedicated subsystem of the brain, builds up representations of relevant figures of the environment on the basis of information encoded by the sensory receptors. Most adherents of the orthodox view also believe that for every conscious perceptual state of the subject, there is a particular set of neurons whose activities are sufficient for the occurrence of that state. Some of the essays in this book defend the orthodoxy; most criticize it; and some propose alternatives to it. Many of the essays are classics. Contributors G.E.M. Anscombe, Dana Ballard, Daniel Dennett, Fred Dretske, Jerry Fodor, H.P. Grice, David Marr, Maurice Merleau-Ponty, Zenon Pylyshyn, Paul Snowdon, and

The Mind E. Bruce Goldstein,2020-09-01 An accessible and engaging account of the mind and its connection to the brain. The mind encompasses everything we experience, and these experiences are created by the brain--often without our awareness. Experience is private; we can't know the minds of others. But we also don't know what is happening in our own minds. In this book, E. Bruce Goldstein offers an accessible and engaging account of the mind and its connection to the brain. He takes as his starting point two central questions--what is the mind? and what is consciousness?--and leads readers through topics that range from conceptions of the mind in popular culture to the wiring system of the brain. Throughout, he draws on the latest research, explaining its significance and relevance.

Imagination and the Meaningful Brain Arnold H. Modell,2003 An exploration of the biology of meaning that integrates the role of subjective processes with current knowledge of brain/mind function.

Mind Readings Paul Thagard,1998-04-09 Mind Readings is a collection of accessible readings on some of the most important topics in cognitive science. Although anyone interested in the interdisciplinary study of mind will find the selections well worth reading, they work particularly well with Paul Thagard's textbook Mind: An Introduction Cognitive Science, and provide further discussion on the major topics discussed in that book. The first eight chapters present approaches to cognitive science from the perspective that thinking consists of computational procedures on mental representations. The remaining five chapters discuss challenges to the computational-representational understanding of mind. Contributors John R. Anderson, Ruth M.J. Byrne, E.H. Durfee, Chris Eliasmith, Owen Flanagan, Dedre Gentner, Janice Glasgow, Philip N. Johnson-Laird, Alan Mackworth, Arthur B. Markman, Douglas L. Medin, Keith Oatley, Dimitri Papadias, Steven Pinker, David E. Rumelhart, Herbert A. Simon.

Transpersonal Hypnosis Eric D Leskowitz,2019-05-23 Transpersonal Hypnosis presents a multidimensional, energy-based view of human awareness that integrates disparate biological, psychological, and spiritual therapeutic techniques. Each of the chapters - all from world-renowned contributors - includes both a historical overview and the theory behind the development of each technique. The authors emphasize experimental studies that examine the validity of using hypnotically accessed transpersonal states of consciousness to heal the body, mind, and spirit. Several clinical vignettes highlight the types of medical and psychological symptoms responsive to these approaches. The emerging field of spiritually-influenced treatments is transforming the practice of medicine.

The Conceptual Mind Eric Margolis,Stephen Laurence,2015-05-08 The study of concepts has advanced dramatically in recent years, with exciting new findings and theoretical developments. Core concepts have been investigated in greater depth and new lines of inquiry have blossomed, with researchers from an ever broader range of disciplines making important contributions. In this volume, leading philosophers and cognitive scientists offer original essays that present the state-of-the-

art in the study of concepts. These essays, all commissioned for this book, do not merely present the usual surveys and overviews; rather, they offer the latest work on concepts by a diverse group of theorists as well as discussions of the ideas that should guide research over the next decade.

Harvest of the Mind Joachim Okoroafor Ph D, 2020-10-18 Mind is man's seat of thought. It is the intelligence faculty of man. The mind has the ability to think and reason. Your mind is the gateway to your life. Friend, reasoning makes rich! Your level of impact cannot be separated from the use of your mind. The quality of your life is determined by the state of your mind. Without your mind, you have no worth. It is the use to which you put your mind that makes the world to mind you. Don't mind him! they say, because the man is not using his mind. But they will mind you when your mind is put to productive use. Your mind is the factor that makes you relevant to the world. When it is out of place, your place in life is lost. Hence, this book *Harvest of the Mind* is out with daily philosophical principles for the harvesting of your mind as you pursue the great task of building our nation's economy. This I also call 'Daily Digest' for great mind.
