Regenesi George Monbiot,2022-05-26 The Sunday Times bestseller *Shortlisted for the Wainwright Prize* A New Statesman and Spectator Book of the Year 'This book calls for nothing less than a revolution in the future of food' Kate Raworth From the bestselling author of Feral, a breathtaking first glimpse of a new future for food and for humanity Farming is the world's greatest cause of environmental destruction - and the one we are least prepared to talk about. We criticise urban sprawl, but farming sprawls across thirty times as much land. We have ploughed, fenced and grazed great tracts of the planet, felling forests, killing wildlife, and poisoning rivers and oceans to feed ourselves. Yet millions still go hungry. Now the food system itself is beginning to falter. But, as George Monbiot shows us in this brilliant, bracingly original new book, we can resolve the biggest of our dilemmas and feed the world without devouring the planet. Regenesi is a breathtaking vision of a new future for food and for humanity. Drawing on astonishing advances in soil ecology, Monbiot reveals how our changing understanding of the world beneath our feet could allow us to grow more food with less farming. He meets the people who are unlocking these methods, from the fruit and vegetable grower revolutionising our understanding of fertility; through breeders of perennial grains, liberating the land from ploughs and poisons; to the scientists pioneering new ways to grow protein and fat. Together, they show how the tiniest life forms could help us make peace with the planet, restore its living systems, and replace the age of extinction with an age of regenesi.

Summary of George Monbiot's Regenesi Everest Media,2022-08-16T22:59:00Z Please note: This is a companion version & not the original book. Sample Book Insights: #1 The author's orchard in England is a wonderful place for fruit, but a terrible place for growing it. The trees are blighted by late frosts, which kill the flowers and the trees' budding fruit. #2 The English have a long history of allotment gardening, which is when local governments grant land to people to cultivate vegetables and fruit. The practice inadvertently spread anarchy, as it created thousands of self-organized, self-governing communities. #3 The orchard is the living calendar that marks my year. It is the place where I spend most of my time. I have brought in three other families, creating a miniature commons within a commons. #4 I love pruning trees. It has become an end in itself, as much sculpture as management. When you have completed the big, structural cuts, you trim the remaining twigs back to a bud that points in the direction you want the new growth to follow.

Regenesi George Monbiot,2022-05-26 People talk a lot about the problems with intensive farming. But the problem isn't

the adjective. It's the noun. Around the world, farming has been wiping out vast habitats, depleting freshwater, polluting oceans, and accelerating global heating, while leaving millions undernourished and unfed. Increasingly, there are signs that the system itself is beginning to flicker. But, as George Monbiot shows us in this brilliant, bracingly original new book, there is another way. *Regeneration* is an exhilarating journey into a new possible future for food, people and the planet. Drawing on the revelatory, rapidly advancing science of soil ecology, Monbiot shows how the hidden biological universe beneath our feet could transform what we eat and how we grow it. He travels to meet the people who are unlocking these methods, from the fruit and vegetable growers who cultivate pests as well as potatoes; through producers of perennial grains who are liberating their fields from ploughs; to the scientists pioneering new forms of protein and fat that can be cooked into rich golden pancakes and much, much more. We start to see how the tiniest life forms in the soil might help us save the living world, allowing us to produce abundant, cheap, healthy food while returning vast swathes of land to the wild. Here, for the first time, is a profoundly hopeful, appetising and exciting vision of food- of revolutionary cultivation and cuisine that could nourish us all and restore our world of wonders.

Feral George Monbiot, 2014-09-26 As an investigative journalist, Monbiot found a mission in his ecological boredom, that of learning what it might take to impose a greater state of harmony between himself and nature. He was not one to romanticize undisturbed, primal landscapes, but rather in his attempts to satisfy his cravings for a richer, more authentic life, he came stumbled into the world of restoration and rewilding. When these concepts were first introduced in 2011, very recently, they focused on releasing captive animals into the wild. Soon the definition expanded to describe the reintroduction of animal and plant species to habitats from which they had been excised. Some people began using it to mean the rehabilitation not just of particular species, but of entire ecosystems: a restoration of wilderness. Rewilding recognizes that nature consists not just of a collection of species but also of their ever-shifting relationships with each other and with the physical environment. Ecologists have shown how the dynamics within communities are affected by even the seemingly minor changes in species assemblages. Predators and large herbivores have transformed entire landscapes, from the nature of the soil to the flow of rivers, the chemistry of the oceans, and the composition of the atmosphere. The complexity of earth systems is seemingly boundless.

Captive State George Monbiot, 2001 Monbiot documents the end of representative government in Britain. The state is no longer the initiator of policy but an increasingly helpless bystander. As institutional corruption strikes at the heart of public life, in a contest between the desires of big business and the needs of the electorate, the electorate loses out every time.

This Can't Be Happening George Monbiot, 2021-08-26 In twenty short books, Penguin brings you the classics of the environmental movement. In the galvanising speeches and essays brought together in *This Can't Be Happening*, George Monbiot calls on humanity to stop averting its gaze from the destruction of the living planet, and wake up to the greatest

predicament we have ever faced. Over the past 75 years, a new canon has emerged. As life on Earth has become irrevocably altered by humans, visionary thinkers around the world have raised their voices to defend the planet, and affirm our place at the heart of its restoration. Their words have endured through the decades, becoming the classics of a movement. Together, these books show the richness of environmental thought, and point the way to a fairer, saner, greener world.

Out of the Wreckage George Monbiot, 2018-06-05 A leading environmental and political commentator draws a roadmap towards new politics—offering a rallying cry for a new vision of what a ‘good’ society can be—in this “dazzling command of science and relentless faith in people” (Naomi Klein, author of *The Shock Doctrine*) What does the good life—and the good society—look like in the 21st century? A toxic ideology of extreme competition and individualism has come to dominate our world. It misrepresents human nature, destroying hope and common purpose. Only a positive vision can replace it, a new story that re-engages people in politics and lights a path to a better future. George Monbiot shows how new findings in psychology, neuroscience and evolutionary biology cast human nature in a radically different light: as the supreme altruists and cooperators. He shows how we can build on these findings to create a new politics: a “politics of belonging.” Both democracy and economic life can be radically reorganized from the bottom up, enabling us to take back control and overthrow the forces that have thwarted our ambitions for a better society. Urgent and passionate, *Out of the Wreckage* provides the hope and clarity required to change the world.

Don't Even Think About It George Marshall, 2014-08-19 From the founder of the Climate Outreach and Information Network, a groundbreaking take on the most urgent question of our time: Why, despite overwhelming scientific evidence, do we still ignore climate change? “Please read this book, and think about it.” --Bill Nye Most of us recognize that climate change is real, and yet we do nothing to stop it. What is this psychological mechanism that allows us to know something is true but act as if it is not? George Marshall's search for the answers brings him face to face with Nobel Prize-winning psychologists and the activists of the Texas Tea Party; the world's leading climate scientists and the people who denounce them; liberal environmentalists and conservative evangelicals. What he discovered is that our values, assumptions, and prejudices can take on lives of their own, gaining authority as they are shared, dividing people in their wake. With engaging stories and drawing on years of his own research, Marshall argues that the answers do not lie in the things that make us different and drive us apart, but rather in what we all share: how our human brains are wired—our evolutionary origins, our perceptions of threats, our cognitive blindspots, our love of storytelling, our fear of death, and our deepest instincts to defend our family and tribe. Once we understand what excites, threatens, and motivates us, we can rethink and reimagine climate change, for it is not an impossible problem. Rather, it is one we can halt if we can make it our common purpose and common ground. Silence and inaction are the most persuasive of narratives, so we need to change the story. In the end, *Don't Even Think About It* is both about climate change and about the qualities that make us human and how we can grow as we deal

with the greatest challenge we have ever faced.

The Sea Inside Philip Hoare,2013-06-06 A startling new book, his most personal to date, from Philip Hoare, co-curator of 'Moby Dick: Big Read and winner of the 2009 Samuel Johnson Prize for 'Leviathan'.

A Small Farm Future Chris Smaje,2020-10-21 A modern classic of the new agrarianism Chris Smaje...shows that the choice is clear. Either we have a small farm future, or we face collapse and extinction.—Vandana Shiva Every young person should read this book.—Richard Heinberg In a groundbreaking debut, farmer and social scientist Chris Smaje argues that organizing society around small-scale farming offers the soundest, sanest and most reasonable response to climate change and other crises of civilisation—and will yield humanity's best chance at survival. Drawing on a vast range of sources from across a multitude of disciplines, *A Small Farm Future* analyses the complex forces that make societal change inevitable; explains how low-carbon, locally self-reliant agrarian communities can empower us to successfully confront these changes head on; and explores the pathways for delivering this vision politically. Challenging both conventional wisdom and utopian blueprints, *A Small Farm Future* offers rigorous original analysis of wicked problems and hidden opportunities in a way that illuminates the path toward functional local economies, effective self-provisioning, agricultural diversity and a shared earth. Perfect for readers of both Wendell Berry and Thomas Piketty, *A Small Farm Future* is a refreshing, new outlook on a way forward for society—and a vital resource for activists, students, policy makers, and anyone looking to enact change.

Regenesis George M Church,Edward Regis,2014-04-08 A Harvard biologist and master inventor explores how new biotechnologies will enable us to bring species back from the dead, unlock vast supplies of renewable energy, and extend human life. In *Regenesis*, George Church and science writer Ed Regis explore the possibilities of the emerging field of synthetic biology. Synthetic biology, in which living organisms are selectively altered by modifying substantial portions of their genomes, allows for the creation of entirely new species of organisms. These technologies-far from the out-of-control nightmare depicted in science fiction-have the power to improve human and animal health, increase our intelligence, enhance our memory, and even extend our life span. A breathtaking look at the potential of this world-changing technology, *Regenesis* is nothing less than a guide to the future of life.

The Book of Trespass Nick Hayes,2020 The vast majority of our country is entirely unknown to us because we are banned from setting foot on it. By law of trespass, we are excluded from 92 per cent of the land and 97 per cent of its waterways, blocked by walls whose legitimacy is rarely questioned. But behind them lies a story of enclosure, exploitation and dispossession of public rights whose effects last to this day. *The Book of Trespass* takes us on a journey over the walls of England, into the thousands of square miles of rivers, woodland, lakes and meadows that are blocked from public access. By trespassing the land of the media magnates, Lords, politicians and private corporations that own England, Nick Hayes argues that the root of social inequality is the uneven distribution of land. Weaving together the stories of poachers, vagabonds,

gypsies, witches, hippies, ravers, ramblers, migrants and protesters, and charting acts of civil disobedience that challenge orthodox power at its heart, *The Book of Trespass* will transform the way you see the land.

GMOs Decoded Sheldon Krimsky, 2019-03-12 The debate over genetically modified organisms: health and safety concerns, environmental impact, and scientific opinions. Since they were introduced to the market in the late 1990s, GMOs (genetically modified organisms, including genetically modified crops), have been subject to a barrage of criticism. Agriculture has welcomed this new technology, but public opposition has been loud and scientific opinion mixed. In *GMOs Decoded*, Sheldon Krimsky examines the controversies over GMOs—health and safety concerns, environmental issues, the implications for world hunger, and the scientific consensus (or lack of one). He explores the viewpoints of a range of GMO skeptics, from public advocacy groups and nongovernmental organizations to scientists with differing views on risk and environmental impact. Krimsky explains the differences between traditional plant breeding and “molecular breeding” through genetic engineering (GE); describes early GMO products, including the infamous Flavr Savr tomato; and discusses herbicide-, disease-, and insect-resistant GE plants. He considers the different American and European approaches to risk assessment, dueling scientific interpretations of plant genetics, and the controversy over labeling GMO products. He analyzes a key 2016 report from the National Academies of Sciences on GMO health effects and considers the controversy over biofortified rice (Golden Rice)—which some saw as a humanitarian project and others as an exercise in public relations. Do GMO crops hold promise or peril? By offering an accessible review of the risks and benefits of GMO crops, and a guide to the controversies over them, Krimsky helps readers judge for themselves.

The Running Hare John Lewis-Stempel, 2016 The Sunday Times Bestseller. Winner of the Thwaites Wainwright Prize 2015. BBC Radio 4's 'Book of the Week' Traditional ploughland is disappearing. Seven cornfield flowers have become extinct in the last twenty years. Once abundant, the corn bunting and the lapwing are on the Red List. The corncrake is all but extinct in England. And the hare is running for its life. Written in exquisite prose, *The Running Hare* tells the story of the wild animals and plants that live in and under our ploughland, from the labouring microbes to the patrolling kestrel above the corn, from the linnet pecking at seeds to the seven-spot ladybird that eats the aphids that eat the crop. It recalls an era before open-roofed factories and silent, empty fields, recording the ongoing destruction of the unique, fragile, glorious ploughland that exists just down the village lane. But it is also the story of ploughland through the eyes of man who took on a field and husbanded it in a natural, traditional way, restoring its fertility and wildlife, bringing back the old farmland flowers and animals. John Lewis Stempel demonstrates that it is still possible to create a place where the hare can rest safe.

Heat George Monbiot, 2007-06-07 'With a dazzling command of science and a relentless faith in people, George Monbiot writes about social change with his eyes wide open' Naomi Klein 'A manifesto for change ... The combination of practical detail and creative thinking is immensely impressive' P. D. Smith, *Guardian* We know that climate change is happening. We

know that it could, if the worst predictions come true, destroy the conditions which make human life possible. Only one question is now worth asking: can it be stopped? In *Heat*, George Monbiot shows that it can. In every case, he supports his proposals with a rigorous investigation into what works, what doesn't, how much it costs and what the problems might be. He wages war on bad ideas as energetically as he promotes good ones. He is not afraid to attack anyone - friend or foe - whose claims are false or whose figures have been fudged. *Heat* also contains a breath-taking new exposure of the corporations trying to stop us from taking action.

Diary of a Young Naturalist Dara McAnulty, 2021-06-08 A BuzzFeed Best Book of June 2021 From sixteen-year-old Dara McAnulty, a globally renowned figure in the youth climate activist movement, comes a memoir about loving the natural world and fighting to save it. *Diary of a Young Naturalist* chronicles the turning of a year in Dara's Northern Ireland home patch. Beginning in spring when "the sparrows dig the moss from the guttering and the air is as puffed out as the robin's chest" these diary entries about his connection to wildlife and the way he sees the world are vivid, evocative, and moving. As well as Dara's intense connection to the natural world, *Diary of a Young Naturalist* captures his perspective as a teenager juggling exams, friendships, and a life of campaigning. We see his close-knit family, the disruptions of moving and changing schools, and the complexities of living with autism. "In writing this book," writes Dara, "I have experienced challenges but also felt incredible joy, wonder, curiosity and excitement. In sharing this journey my hope is that people of all generations will not only understand autism a little more but also appreciate a child's eye view on our delicate and changing biosphere." Winner of the Wainwright Prize for UK nature writing and already sold into more than a dozen territories, *Diary of a Young Naturalist* is a triumphant debut from an important new voice.

Heat George Monbiot, 2009-03-19 George Monbiot's *Heat: How to Stop the Planet from Burning* marks an important moment in our civilization's thinking about global warming. The question is no longer whether climate change is actually happening. The question is what to do about it. Monbiot offers an ambitious and far-reaching program to cut our carbon dioxide emissions to the point where the environmental scales start tipping away from catastrophe. (But not before he devotes a chapter to unmasking the vested interests that have spent fortunes funding the specious science of the climate change deniers.) It now seems certain that we need a 90% cut in our emissions by 2030 to prevent runaway climate change from taking place. For the first time, this book explains how the cut could be achieved without bringing industrial civilisation to an end. Combining his unique knowledge of political campaigning and environmental science, Monbiot analyses the potential of energy efficiency, renewable resources, carbon burial, nuclear power and new transport and building systems to discover what works, what doesn't, what costs the least and what needs to be done to make change happen. He is not afraid to attack anyone—friend or foe—whose claims are false or whose figures have been fudged. His original, sometimes shocking programme shows that we can reconcile our demands for comfort and security with the survival of the biosphere. Rigorous,

passionate and totally surprising, this book could change the world. It is possible to slow the momentum of this global crisis—if we act decisively. In this riveting, fiery book, the No Logo of the environmental movement, George Monbiot shows us how.

SOS Seth Wynes, 2019-07-11 'The most effective ways for individuals to reduce their carbon footprint' INews Climate Change researcher, Seth Wynes, sets out in the simplest terms how you can make a real and positive impact. Make changes at home, at work, to how you shop, eat, live - start by finding one thing your family can change with this book and do it today. What you do matters - and the science proves it. How many actions can you tick off the list in this book to help save our planet?

Rambunctious Garden Emma Marris, 2011-09-06 "Remarkable . . . Emma Marris explores a paradox that is increasingly vexing the science of ecology, namely that the only way to have a pristine wilderness is to manage it intensively." -The Wall Street Journal A paradigm shift is roiling the environmental world. For decades people have unquestioningly accepted the idea that our goal is to preserve nature in its pristine, pre-human state. But many scientists have come to see this as an outdated dream that thwarts bold new plans to save the environment and prevents us from having a fuller relationship with nature. Humans have changed the landscapes they inhabit since prehistory, and climate change means even the remotest places now bear the fingerprints of humanity. Emma Marris argues convincingly that it is time to look forward and create the rambunctious garden, a hybrid of wild nature and human management. In this optimistic book, readers meet leading scientists and environmentalists and visit imaginary Edens, designer ecosystems, and Pleistocene parks. Marris describes innovative conservation approaches, including rewilding, assisted migration, and the embrace of so-called novel ecosystems. Rambunctious Garden is short on gloom and long on interesting theories and fascinating narratives, all of which bring home the idea that we must give up our romantic notions of pristine wilderness and replace them with the concept of a global, half-wild rambunctious garden planet, tended by us.

Eating to Extinction Dan Saladino, 2021-09-23 'A book of wonders' Bee Wilson, Sunday Times Books of the Year Winner of the Wainwright Prize 2022 - Eating to Extinction is an astonishing journey through the past, present and future of food, showing why reclaiming a diverse food culture is vital. Dan Saladino spans the globe to uncover their stories, meeting the pioneering farmers, scientists, cooks, food producers and indigenous communities who are defending food traditions and fighting for change. Eating to Extinction is about so much more than preserving the past.
