*The Regatta in the Skies* Laurence Lieberman,1999 The Regatta in the Skies is a wonderful, complex collection of the best long poems from each phase of Laurence Lieberman's distinguished but still developing career, from his midwestern American childhood to his travels to the exotic landscapes of the underwater world, Japan, and the Caribbean. In a number of recent poems, Lieberman view islands of the West Indies through the eyes of intriguing local artists. Using cross-cultural relationships on individual and national levels to create a new kind of poetry as witness, he weaves stories into the poems. No less engaging than his subjects are his cadences, ordered in intricately textured lines and original syllabic stanza patterns. Orange County Plague: Scenes focuses on the plight of the orange trees in southern California, blending motifs of politics, social history, civil rights of ethnic minorities, and the mythology surrounding them with descriptions of nature and landscape. This linked progression of seventeen poems, structured like a sonnet sequence, establishes the primacy of place in Lieberman's continuing canon. The longest poems deal with Jamaica, but others take as their settings a number of the smaller Caribbean islands, including Montserrat. In the poem The Factories of Bay Leaf and Lime Lieberman celebrates

instinctive beauties of Montserrat's culture and workplace, and helps memorialize its national character at a time when the entire country is threatened with extinction by a volcano. The Regatta in the Skies is a bold and unforgettable collection from a poet at the top of his form.

Spider Evolution Subir Ranjan Kundu,2021-10-14 Spider Evolution: Genetics, Behavior, and Ecological Influences provides a thorough exploration of the evolutionary trail of arachnids, particularly spider species, from prehistoric origins to current sustainability issues. This book analyzes extinct organisms in the Arachnida class, specifically looking at their phylogenomics and molecular footprints to understand evolutionary changes in diversification in today's species. Sections cover spider origins and their influences on behavioral traits, physiology of sensory organs, and biomechanics, also touching on spiders as prey and predators and how their roles have changed in the 400 million years of Arachnida existence. The book then focuses upon current environmental issues facing spider species and how these have, and can, affect the evolution of these organisms. Topics include biodiversity minimization, climate change and natural disasters. This book is a much-needed resource for entomologists and arachnid- or arthropod-driven researchers. Advanced undergraduate and graduate students will also benefit from the historic review, current assessment and future predictions of spider evolution provided in this book.
