Project Origami Thomas Hull, 2012-12-21 Project Origami: Activities for Exploring Mathematics, Second Edition presents a flexible, discovery-based approach to learning origami-math topics. It helps readers see how origami intersects a variety of mathematical topics, from the more obvious realm of geometry to the fields of algebra, number theory, and combinatorics. With over 100 new pages, this updated and expanded edition now includes 30 activities and offers better solutions and teaching tips for all activities. The book contains detailed plans for 30 hands-on, scalable origami activities. Each activity lists courses in which the activity might fit, includes handouts for classroom use, and provides notes for instructors on solutions, how the handouts can be used, and other pedagogical suggestions. The handouts are also available on the book's CRC Press web page. Reflecting feedback from teachers and students who have used the book, this classroom-tested text provides an easy and entertaining way for teachers to incorporate origami into a range of college and advanced high school math courses. Moral Tribes Joshua Greene, 2014-01-02 A ground-breaking and ambitious book that promotes a new understanding of morality, one that will help us to solve society's biggest problems. Our brains were designed for tribal life, for getting along with a select group of others (Us), and for fighting off everyone else (Them). But modern life has thrust the world's tribes into a shared space, creating conflicts of interest and clashes of values, along with unprecedented opportunities. As the world shrinks, the moral lines that divide us become more salient and more puzzling. We fight over everything from tax codes to

gay marriage to global warming, and we wonder where, if at all, we can find our common ground. A grand synthesis of neuroscience, psychology, and philosophy, *Moral Tribes* reveals the underlying causes of modern conflict and lights a way forward. Our emotions make us social animals, turning Me into Us. But they also make us tribal animals, turning Us against Them. Our tribal emotions make us fight, sometimes with bombs, sometimes with words, and often with life-and-death stakes. Drawing inspiration from moral philosophy and cutting-edge science, *Moral Tribes* shows when we should trust our instincts, when we should reason, and how the right kind of reasoning can move us forward. Joshua Greene is the director of Harvard University's Moral Cognition Lab, a pioneering scientist, a philosopher, and an acclaimed teacher. The great challenge of *Moral Tribes* is this: How can we get along with Them when what they want feels so wrong? Finally, Greene offers a surprisingly simple set of maxims for navigating the modern moral terrain, a practical road map for solving problems and living better lives.

A Very Bad Wizard Tamler Sommers, 2016-05-26 In the first edition of *A Very Bad Wizard: Morality Behind the Curtain - Nine Conversations*, philosopher Tamler Sommers talked with an interdisciplinary group of the world's leading researchers—from the fields of social psychology, moral philosophy, cognitive science, and primatology—all working on the same issue: the origins and workings of morality. Together, these nine interviews pulled back some of the curtain, not only on our moral lives but—through Sommers' probing, entertaining, and well informed questions—on the way morality traditionally has been studied. This Second Edition increases the subject matter, adding eight additional interviews and offering features that will make *A Very Bad Wizard* more useful in undergraduate classrooms. These features include structuring all chapters around sections and themes familiar in a course in ethics or moral psychology; providing follow-up podcasts for some of the interviews, which will delve into certain issues from the conversations in a more informal manner; including an expanded and annotated reading list with relevant primary sources at the end of each interview; presenting instructor and student resources online in a companion website. The resulting new publication promises to synthesize and make accessible the latest interdisciplinary research to offer a brand new way to teach philosophical ethics and moral psychology.

The Mathematical Legacy of Richard P. Stanley Patricia Hersch, Thomas Lam, Pavlo Pylyavskyy, Victor Reiner, 2016-12-08 Richard Stanley's work in combinatorics revolutionized and reshaped the subject. His lectures, papers,

and books inspired a generation of researchers. In this volume, these researchers explain how Stanley's vision and insights influenced and guided their own perspectives on the subject. As a valuable bonus, this book contains a collection of Stanley's short comments on each of his papers. This book may serve as an introduction to several different threads of ongoing research in combinatorics as well as giving historical perspective.

String-Math 2014 Vincent Bouchard:,Charles Doran,Stefan Méndez-Diez,Callum Quigley,2016-06-10 The conference String-Math 2014 was held from June 9-13, 2014, at the University of Alberta. This edition of String-Math is the first to include satellite workshops: "String-Math Summer School" (held from June 2-6, 2014, at the University of British Columbia), "Calabi-Yau Manifolds and their Moduli" (held from June 14-18, 2014, at the University of Alberta), and "Quantum Curves and Quantum Knot Invariants" (held from June 16-20, 2014, at the Banff International Research Station). This volume presents the proceedings of the conference and satellite workshops. For mathematics, string theory has been a source of many significant inspirations, ranging from Seiberg-Witten theory in four-manifolds, to enumerative geometry and Gromov-Witten theory in algebraic geometry, to work on the Jones polynomial in knot theory, to recent progress in the geometric Langlands program and the development of derived algebraic geometry and n-category theory. In the other direction, mathematics has provided physicists with powerful tools, ranging from powerful differential geometric techniques for solving or analyzing key partial differential equations, to toric geometry, to K-theory and derived categories in D-branes, to the analysis of Calabi-Yau manifolds and string compactifications, to modular forms and other arithmetic techniques. Articles in this book address many of these topics.

Just Don't Fall: How I grew up, conquered illness and made it down the Mountain Josh Sundquist,2010-05-03 A remarkable odyssey that John le Carre calls 'inspiring, courageous, sometimes heartbreaking' Josh Sundquist was an energetic and inquisitive nine-year-old when he was diagnosed with Ewing's sarcoma, a virulent cancer that eventually claimed his left leg. His extraordinary journey takes him from his small southern town-with his father, an aspiring pastor questioning his faith, and his mother, a rigidly conservative homeschool teacher- through a dizzying array of hospitals, on to high school, and then to the mountains, where Josh learns to ski. On the slopes, Josh's world bursts wide open and he finds within him the drive to become a champion skier, despite his disability. While he navigates the dramas of high school and an unstable home life, Josh keeps his eyes on the prize-the 2006 Paralympics in Turin, Italy. Just Don't Fall isn't just the story of a boy becoming a man, but of a champion realizing his greatest aspiration.

Bordered Heegaard Floer Homology Robert Lipshitz,Peter Ozsváth,Dylan P. Thurston,2018-08-09 The authors

construct Heegaard Floer theory for 3-manifolds with connected boundary. The theory associates to an oriented, parametrized two-manifold a differential graded algebra. For a three-manifold with parametrized boundary, the invariant comes in two different versions, one of which (type D) is a module over the algebra and the other of which (type A) is an A_∞ module. Both are well-defined up to chain homotopy equivalence. For a decomposition of a 3-manifold into two pieces, the A_∞ tensor product of the type D module of one piece and the type A module from the other piece is \widehat{HF} of the glued manifold. As a special case of the construction, the authors specialize to the case of three-manifolds with torus boundary. This case can be used to give another proof of the surgery exact triangle for \widehat{HF} . The authors relate the bordered Floer homology of a three-manifold with torus boundary with the knot Floer homology of a filling.

Crazy Christmas Jeanne Betancourt, 1988 Aviva must cope with her divorced parents' two families, a trip to New York, the problems of her best friend, and a Christmas split between the two families.

U.S. Education Reform and National Security Joel I. Klein, Condoleezza Rice, 2014-05-14 The United States' failure to educate its students leaves them unprepared to compete and threatens the country's ability to thrive in a global economy and maintain its leadership role. This report notes that while the United States invests more in K-12 public education than many other developed countries, its students are ill prepared to compete with their global peers. According to the results of the 2009 Program for International Student Assessment (PISA), an international assessment that measures the performance of 15-year-olds in reading, mathematics, and science every three years, U.S. students rank fourteenth in reading, twenty-fifth in math, and seventeenth in science compared to students in other industrialized countries. The lack of preparedness poses threats on five national security fronts: economic growth and competitiveness, physical safety, intellectual property, U.S. global awareness, and U.S. unity and cohesion, says the report. Too many young people are not employable in an increasingly high-skilled and global economy, and too many are not qualified to join the military because they are physically unfit, have criminal records, or have an inadequate level of education. The report proposes three overarching policy recommendations: implement educational expectations and assessments in subjects vital to protecting national security; make structural changes to provide students with good choices; and, launch a national security readiness audit to hold schools and policymakers accountable for results and to raise public awareness.

Puppy Love Jeanne Betancourt, 1986 A child of divorced parents, eighth-grader Aviva has to deal with her two families, a new baby brother, grief over her dog's death, a crush on an unattainable boy, and a troubled schoolmate who turns out to be a really good friend and strong support.

Mostly Harmless Econometrics Joshua D. Angrist, Jörn-Steffen Pischke, 2009-01-04 In addition to econometric essentials, this book covers important new extensions as well as how to get standard errors right. The authors explain why fancier econometric techniques are typically unnecessary and even dangerous.

Slow Seconds Ronald Rees, Joshua Green, 2019-09-24 George Taylor's vivid New Brunswick of yesteryear comes to life. The photographs of George Taylor (1838-1913) offer viewers a fascinating glimpse into nineteenth-century New Brunswick. Taylor's career coincided with a period when photographers began to provide Canadians with images of the wilderness. Drawing on the knowledge and expertise of Indigenous guides, Taylor travelled not only through settled parts of New Brunswick, but also into the wilderness of the north, providing views of hitherto unfamiliar and unknown terrain and helping to popularize the outdoors as a venue for canoeing, hunting and fishing. Taylor's work is also a record of rural and farm life on the rich floodplains and intervals of the Saint John River valley, of daily life in Fredericton, and of the large-scale expansion of railways in the province. Captured in the slow seconds of his camera, George Taylor's photographs illuminated landscapes, people, and the seismic changes taking place at the cusp of the new century. The first book of Taylor's photographs, *Slow Seconds* presents a curated selection of one hundred photographs together with an account of the beginnings of photography and Taylor's life and work.

Unstoppable Joshua M. Greene, 2021-04-06 Winner - Best of Los Angeles Award's Best Holocaust Book - 2021 "A must-read that hopefully will be adapted for the screen. Greene lets Wilzig's effervescent spirit shine through, and his story will appeal to a wide variety of readers." - Library Journal *Unstoppable* is the ultimate immigrant story and an epic David-and-Goliath adventure. While American teens were socializing in ice cream parlors, Siggie was suffering beatings by Nazi hoodlums for being a Jew and was soon deported along with his family to the darkest place the world has ever known: Auschwitz. Siggie used his wits to stay alive, pretending to have trade skills the Nazis could exploit to run the camp. After two death marches and near starvation, he was liberated from camp Mauthausen and went to work for the US Army hunting Nazis, a service that earned him a visa to America. On arrival, he made three vows: to never go hungry again, to support the Jewish people, and to speak out against injustice. He earned his first dollar shoveling snow after a fierce blizzard. His next job was laboring in toxic sweatshops. From these humble beginnings, he became President, Chairman and CEO of a New York Stock Exchange-listed oil company and grew a full-service commercial bank to more than \$4 billion in assets. Siggie's ascent from the darkest of yesterdays to the brightest of tomorrows holds sway over the imagination in this riveting narrative of grit, cunning, luck, and the determination to live life to the fullest.

Until the End of Time Brian Greene, 2020-02-18 From the world-renowned physicist and bestselling author of *The Elegant Universe* and *The Fabric of the Cosmos*, a captivating exploration of deep time and humanity's search for purpose. In both time and space, the cosmos is astoundingly vast, and yet is governed by simple, elegant, universal mathematical laws. On this cosmic timeline, our human era is spectacular but fleeting. Someday, we know, we will all die. And, we know, so too will the universe itself. *Until the End of Time* is Brian Greene's breathtaking new exploration of the cosmos and our quest to understand it. Greene takes us on a journey across time, from our most refined understanding of the universe's beginning, to

the closest science can take us to the very end. He explores how life and mind emerged from the initial chaos, and how our minds, in coming to understand their own impermanence, seek in different ways to give meaning to experience: in story, myth, religion, creative expression, science, the quest for truth, and our longing for the timeless, or eternal. Through a series of nested stories that explain distinct but interwoven layers of reality—from the quantum mechanics to consciousness to black holes—Greene provides us with a clearer sense of how we came to be, a finer picture of where we are now, and a firmer understanding of where we are headed. Yet all this understanding, which arose with the emergence of life, will dissolve with its conclusion. Which leaves us with one realization: during our brief moment in the sun, we are tasked with the charge of finding our own meaning. Let us embark.
