Perspectives on Bias in Mental Testing Cecil Reynolds 2013-11-11 The cultural-test-bias hypothesis is one of the most important scientific questions facing psychology today. Briefly, the cultural-test-bias hypothesis contends that all observed group differences in mental test scores are due to a built-in cultural bias of the tests themselves; that is, group score differences are an artifact of current psychometric methodology. If the cultural-test-bias hypothesis is ultimately shown to be correct, then the 100 years or so of psychological research on human differences (or differential psychology, the scientific discipline underlying all applied areas of human psychology including clinical, counseling, school, and industrial psychology) must be reexamined and perhaps dismissed as confounded, contaminated, or otherwise artifactual. In order to continue its existence as a scientific discipline, psychology must confront the cultural-test-bias hypothesis from the solid foundations of data and theory and must not allow the resolution of this issue to occur solely within (and to be determined by) the political Zeitgeist of the times or any singular work, no matter how comprehensive. In his recent volume *Bias in Mental Testing* (New York: Free Press, 1980), Arthur Jensen provided a thorough review of most of the empirical research relevant to the evaluation of cultural bias in psychological and educational tests that was available at the time that his book was prepared. Nevertheless, Jensen presented only one perspective on those issues in a volume intended not only for the scientific community but for intelligent laypeople as well.

Athens and the War on Public Space Klara Jaya Brekke 2018 Sometimes, the maelstrom of a crisis can be captured in a single image. The image of the mundane, barely noticeable movement of an urban dweller as they go about their everyday life. *Athens and the War on Public Space* commences from images just like this one, collected over a two-year period of research (2012-2014) in Athens during a time of severe financial and political crisis. For the author-curators of this volume, public space became a light-sensitive surface upon which they could begin to map the material imprints of the most structural and violent characteristics of the crisis, and their research spread in different directions, tracking the role of infrastructure and the shifts the financial crisis brought about upon built environments, the violent manifestations of the official anti-migrant policy, the rise of racism, the imposition of the emergency upon public space, and the phenomenology of mass transit.

The Sociology of Zygmunt Bauman Michael Hviid Jacobsen 2016-03-03 Zygmunt Bauman is one of the most inspirational and controversial thinkers on the scene of contemporary sociology. For several decades he has provided compelling analyses and diagnoses of a vast variety of aspects of modern and liquid modern living. This book considers the theoretical significance of his contribution to sociology, but also discusses and adopts a critical stance towards his work. *The Sociology of Zygmunt Bauman* introduces and critically appraises some of the most significant as well as some of the lesser known of Bauman's contributions to contemporary sociology. An international team of scholars delineates and discusses how Bauman's treatment of these themes challenges conventional wisdom in sociology, thereby revising and revitalizing sociological theory. As a special feature, the book concludes with Bauman's intriguing reflections and contemplations on his own life and intellectual trajectory, published here for the first time in English. In this postscript aptly entitled 'Pro Domo Sua' ('About Myself'), he describes the pushes and pulls that throughout the years have shaped his thinking.

Improvement Science in Evaluation: Methods and Uses Christina A. Christie 2017-04-24 While improvement science has experienced a surge of interest over the past 30 years, applications of it are rare in the evaluation literature. This issue promotes the cross-fertilization of ideas, techniques, and tools between evaluation and improvement science. There are at least four areas where this cross-fertilization is particularly relevant: learning from error, examining variation, appreciating context, and focusing on systems change. This volume considers: the conceptual similarities and distinctions between improvement science and evaluation; the intellectual foundations, methods, and tools that collectively comprise improvement science; and case chapters that offer an inspiring review of state-of-the-art improvement science applications. Cutting across all of these applications is a shared grounding in systems thinking, a determination to capture and better understand variation and contextual complexity, as well as a sustained commitment to generative learning about projects and programs—all issues of great concern to evaluators. The issue offers producers and users of evaluations the potential benefits of a closer engagement with improvement science. This is the 153rd issue in the *New Directions for Evaluation* series from Jossey-Bass. It is an official publication of the American Evaluation Association.

Down Syndrome Across the Life Span Monica Cuskelly 2008-04-30 This book promotes a positive message for people with Down syndrome across the world. Living with Down Syndrome is a positive experience for the majority of children and adults with Down syndrome, and for their families. Of course there are difficulties to be faced, but quality of life, from infancy to old age, is determined more by the quality of healthcare, education and social inclusion offered to individuals, than by the developmental difficulties that are associated with Down syndrome. The aim of this book is to bring the latest information on research and good practice to families, practitioners and policy makers in order improve the services available to individuals with Down syndrome in all countries.

Current Perspectives on Child Language Acquisition Caroline F. Rowland 2020-09-15 In recent years the field has seen an increasing realisation that the full complexity of language acquisition demands theories that (a) explain how children integrate information from multiple sources in the environment, (b) build linguistic representations at a number of different levels, and (c) learn how to combine these representations in order to communicate effectively. These new findings have stimulated new theoretical perspectives that are more centered on explaining learning as a complex dynamic interaction between the child and her environment. This book is the first attempt to bring some of these new perspectives together in one place. It is a collection of essays written by a group of researchers who all take an approach centered on child-environment interaction, and all of whom have been influenced by the work of Elena Lieven, to whom this collection is dedicated.

Approaches to Art Therapy Judith Aron Rubin 2001 This new edition brings together the varied theoretical approaches to art therapy and provides a variety of solutions to the challenge of translating theory into technique. In each chapter, contributors provide a definition of and orientation to the specific area of emphasis, showing its relevance to art therapy. Clinical examples and nearly 100 illustrations are employed as the authors present the creative and effective treatment of patients. (Midwest).
