

Mating Mind How Sexual Choice Shaped The Evolution Of Human Nature

The Evolution of Beauty Richard O. Prum 2017-05-09 A FINALIST FOR THE PULITZER PRIZE NAMED A BEST BOOK OF THE YEAR BY THE NEW YORK TIMES BOOK REVIEW, SMITHSONIAN, AND WALL STREET JOURNAL A major reimagining of how evolutionary forces work, revealing how mating preferences—what Darwin termed "the taste for the beautiful"—create the extraordinary range of ornament in the animal world. In the great halls of science, dogma holds that Darwin's theory of natural selection explains every branch on the tree of life: which species thrive, which wither away to extinction, and what features each evolves. But can adaptation by natural selection really account for everything we see in nature? Yale University ornithologist Richard Prum—reviving Darwin's own views—thinks not. Deep in tropical jungles around the world are birds with a dizzying array of appearances and mating displays: Club-winged Manakins who sing with their wings, Great Argus Pheasants who dazzle prospective mates with a four-foot-wide cone of feathers covered in golden 3D spheres, Red-capped Manakins who moonwalk. In thirty years of fieldwork, Prum has seen numerous display traits that seem disconnected from, if not outright contrary to, selection for individual survival. To explain this, he dusts off Darwin's long-neglected theory of sexual selection in which the act of choosing a mate for purely aesthetic reasons—for the mere pleasure of it—is an independent engine of evolutionary change. Mate choice can drive ornamental traits from the constraints of adaptive evolution, allowing them to grow ever more elaborate. It also sets the stakes for sexual conflict, in which the sexual autonomy of the female evolves in response to male sexual control. Most crucially, this framework provides important insights into the evolution of human sexuality, particularly the ways in which female preferences have changed male bodies, and even maleness itself, through evolutionary time. *The Evolution of Beauty* presents a unique scientific vision for how nature's splendor contributes to a more complete understanding of evolution and of ourselves.

Evolutionary Social Psychology Jeffrey A. Simpson 2014-02-25 What a pity it would have been if biologists had refused to accept Darwin's theory of natural selection, which has been essential in helping biologists understand a wide range of phenomena in many animal species. These days, to study any animal species while refusing to consider the evolved adaptive significance of their behavior would be considered pure folly-- unless, of course, the species is homo sapiens. Graduate students training to study this particular primate species may never take a single course in evolutionary theory, although they may take two undergraduate and up to four graduate courses in statistics. These methodologically sophisticated students then embark on a career studying human aggression, cooperation, mating behavior, family relationships, or altruism with little or no understanding of the general evolutionary forces and principles that shaped the behaviors they are investigating. This book hopes to redress that wrong. It is one of the first to apply evolutionary theories to mainstream problems in personality and social psychology that are relevant to a wide range of important social phenomena, many of which have been shaped and molded by natural selection during the course of human evolution. These phenomena include selective biases that people have concerning how and why a variety of activities occur. For example: * information exchanged during social encounters is initially perceived and interpreted; * people are romantically attracted to some potential mates but not others; * people often guard, protect, and work hard at maintaining their closest relationships; * people form shifting and highly complicated coalitions with kin and close friends; and * people terminate close, long-standing relationships. *Evolutionary Social Psychology* begins to disentangle the complex, interwoven patterns of interaction that define our social lives and relationships.

A Taste for the Beautiful Michael J. Ryan 2019-06-25 "In *A Taste for the Beautiful*, Michael Ryan, one of the world's leading authorities on animal behavior, tells the remarkable story of how he and other scientists have taken up where Darwin left off, transforming our understanding of sexual selection and shedding new light on animal and human behavior. Drawing on cutting-edge science, Ryan explores the key questions: Why do animals perceive certain traits as beautiful and others not? Do animals have an inherent sexual aesthetic and, if so, where is it rooted? Ryan argues that the answers lie in the brain--particularly of females, who act as biological puppeteers, spurring the development of beautiful traits in males."--Back cover

Mate Tucker Max 2015-09-15 Whether they conducted their research in life or in the lab, experts Tucker Max and Geoffrey Miller have spent the last 20+ years learning what women really want from their men, why they want it, and how men can deliver it. The short answer: become the best version of yourself possible, then show it off. It sounds simple, but it's not. If it were, Tinder would just be the stuff you use to start a fire. Becoming your best self requires honesty, self-awareness, hard work, and a little help. Through their website and podcast, Max and Miller have already helped more than one million guys take their first steps toward Ms. Right. They have collected all of their findings in *Mate*, an evidence-driven, seriously funny playbook that will teach you how to become a more sexually attractive and romantically successful man, the right way

Virtue Signaling Geoffrey Miller 2019-09-16 'Virtue signaling' is the phrase that got popular on social media during the 2016 election as a way of derogating political opponents. But what is virtue signaling, really? How does it work, where does it come from, and is it really a bad thing? How can it help people to virtue signaling better -- when you're doing it, and when your friends, family, colleagues, and mates are doing it? This short, thoughtful, easy-to-read book is about how we can better understand people's instincts to show off our moral virtues, personality traits, ideologies, political attitudes, and lifestyle choices through our public behavior and language, from dating to street protests to social media to academic censorship. It shows how virtue signaling is the key to understanding current debates about free speech and viewpoint diversity on campuses, in corporations, and throughout society. Understanding virtue signaling is a social superpower, like understanding body language, or personality traits, or sex differences. Are you curious why politics and religion lead to so many bitter debates around the Thanksgiving dinner table -- even among relatives who get along in every other domain? Or why so many single people put 'No Trump supporters' or 'No Libtards' on the dating profiles -- when politics plays such a small role in day-to-day relationships? Or why Gen Z college students want to censor ideas they think are evil -- when they're supposed to be exposing themselves to diverse perspectives? Virtue signaling is one of those concepts that's easy to understand, but that most people don't bother to face -- because we're all doing it all the time, and acknowledging our own virtue signaling makes us feel embarrassed and hypocritical. Let's face the reality of virtue signaling. This book offers a scientifically grounded, practical, non-partisan set of insights so you understand your own ideological passions, your relationships, and your society much more easily. If you don't understand your own virtue signaling, then your ideologies and signaling habits, not your conscious mind, are running your life. If you don't understand other people's virtue signaling, then it's hard to take their point of view and to find common ground with them. If you don't understand virtue signaling in the political realm, it's hard to convince other citizens to support your causes, policies, and candidates. This book collects seven essays written from 1996 through 2018. They're all focused around the evolutionary psychology of politics, ethics, and language. It includes a new preface, new introductions that give the backstory to each essay, and a new list of further readings (including about 100 books by other people). The book is about 32,000 words, or about 85-130 pages depending on your reader format. The author, Geoffrey Miller, is a tenured evolutionary psychology professor at University of New Mexico. He's been writing and teaching about the origins and functions of moral virtues for decades. His previous books include *The Mating Mind*, *Spent*, *Mating Intelligence*, and *What Women Want*. He got his B.A. from Columbia University, and his Ph.D. from Stanford University. He's also worked at NYU Stern Business School, UCLA, University College London, and the London School of Economics. He has over 110 publications about sexual selection, mate choice, signaling theory, fitness indicators, consumer behavior, marketing, intelligence, creativity, language, art, music, humor, emotions, personality, psychopathology, and behavior genetics. He has also given 200 talks in 16 countries, and his research has been featured in *Nature*, *Science*, *The New York Times*, *The Washington Post*, *New Scientist*, and *The Economist*, on NPR and BBC radio, and in documentaries on CNN, PBS, Discovery Channel, National Geographic Channel, and BBC.

Must-have Geoffrey Miller 2010 In this original, provocative and witty book, Geoffrey Miller takes us on a journey through the surreal wonderlands of marketing, advertising and media to explore the hidden instincts behind our choices.

Encyclopedia of Evolutionary Psychological Science Todd K. Shackelford 2021-03-20 This comprehensive, twelve volume reference work reflects the interdisciplinary influences on evolutionary psychology and serves as a major resource for its history, scientific contributors and theories. It draws on biology, cognitive science, anthropology, psychology, economics, computer science and paleoarchaeology to provide a multifaceted picture of behavioral adaptation in humans and how it adds to our academic and clinical understanding. Edited by a noted figure in evolutionary psychology, with many seminal and renowned contributors, this encyclopedia offers the full breadth of an area that is the forefront of behavioral thinking and investigation.

The Ant and the Peacock Helena Cronin 1993-09-24 This book is a success story. It explains two long-running puzzles of the theory of natural selection. How can natural selection favour those, like the ant, that renounce tooth and claw in favour of the public-spirited ways of the commune? How can it explain the peacock's tail, flamboyant and a burden to its bearer; surely selection would act against useless ornamentation? Helena Cronin's enthralling account blends history, science and philosophy in a gripping tale that is scholarly, entertaining and eminently readable. The hardback edition was selected by Nature as one of the best scientific books in 1992. Also the New York Times chose it as one of their best books of 1992. The author divides her time between the Philosophy Department at the London School of Economics and the Zoology Department at Oxford.

In the Light of Evolution National Academy of Sciences 2007 The Arthur M. Sackler Colloquia of the National Academy of Sciences address scientific topics of broad and current interest, cutting across the boundaries of traditional disciplines. Each year, four or five such colloquia are scheduled, typically two days in length and international in scope. Colloquia are organized by a member of the Academy, often with the assistance of an organizing committee, and feature presentations by leading scientists in the field and discussions with a hundred or more researchers with an interest in the topic. Colloquia presentations are recorded and posted on the National Academy of Sciences Sackler colloquia website and published on CD-ROM. These Colloquia are made possible by a generous gift from Mrs. Jill Sackler, in memory of her husband, Arthur M. Sackler.

Sperm Wars Robin Baker 2020-10-06 This classic work on the rules of sex -- updated for a new generation -- is still as provocative as the day it was published, providing simple explanations for any and all questions about what happens in the bedroom. Sex isn't as complicated as we make it. In *Sperm Wars*, evolutionary biologist Robin Baker argues that every question about human sexuality can be explained by one simple thing: sperm warfare. In the interest of promoting competition between sperm to fertilize the same egg, evolution has built men to conquer and monopolize women while women are built to seek the best genetic input on offer from potential sexual partners. Baker reveals, through a series of provocative fictional scene, the far-reaching implications of sperm competition. 10% of children are not fathered by their "fathers;" over 99% of a man's sperm exists simply to fight off all other men's sperm; and a woman is far more likely to conceive through a casual fling than through sex with her regular partner. From infidelity, to homosexuality, to the female orgasm, *Sperm Wars* turns on every light in the bedroom. Now with new material reflecting the latest research on sperm warfare, this milestone of popular science will still surprise, entertain, and even shock.

Evolution's Rainbow Joan Roughgarden 2013-09-14 In this innovative celebration of diversity and affirmation of individuality in animals and humans, Joan Roughgarden challenges accepted wisdom about gender identity and sexual orientation. A distinguished evolutionary biologist, Roughgarden takes on the medical establishment, the Bible, social science—and even Darwin himself. She leads the reader through a fascinating discussion of diversity in gender and sexuality among fish, reptiles, amphibians, birds, and mammals, including primates. *Evolution's Rainbow* explains how this diversity develops from the action of genes and hormones and how people come to differ from each other in all aspects of body and behavior. Roughgarden reconstructs primary science in light of feminist, gay, and transgender criticism and redefines our understanding of sex, gender, and sexuality. Witty, playful, and daring, this book will revolutionize our understanding of sexuality. Roughgarden argues that principal elements of Darwinian sexual selection theory are false and suggests a new theory that emphasizes social inclusion and control of access to resources and mating opportunity. She disputes a range of scientific and medical concepts, including Wilson's genetic determinism of behavior, evolutionary psychology, the existence of a gay gene, the role of parenting in determining gender identity, and Dawkins's "selfish gene" as the driver of natural selection. She dares social science to respect the agency and rationality of diverse people; shows that many cultures across the world and throughout history accommodate people we label today as lesbian, gay, and transgendered; and calls on the Christian religion to acknowledge the Bible's many passages endorsing diversity in gender and sexuality. *Evolution's Rainbow* concludes with bold recommendations for improving education in biology, psychology, and medicine; for democratizing genetic engineering and medical practice; and for building a public monument to affirm diversity as one of our nation's defining principles.

The Evolution of Human Life History Kristen Hawkes 2006 Human beings may share 98 percent of their genetic makeup with their nonhuman primate cousins, but they have distinctive life histories. When and why did these uniquely human patterns evolve? To answer that question, this volume brings together specialists in hunter-gatherer behavioral ecology and demography, human growth, development, and nutrition, paleodemography, human paleontology, primatology, and the genomics of aging. The contributors identify and explain the peculiar features of human life histories, such as the rate and timing of processes that directly influence survival and reproduction. Drawing on new evidence from paleoanthropology, they question existing arguments that link human's extended childhood dependency and long 'post-reproductive' lives to brain development, learning, and distinctively human social structures. The volume reviews alternative explanations for the distinctiveness of human life history and incorporates multiple lines of evidence in order to test them.

The Consuming Instinct Gad Saad 2011-06-21 In this highly informative and entertaining book, the founder of the vibrant new field of evolutionary consumption illuminates the relevance of our biological heritage to our daily lives as consumers. While culture is important, the author shows that innate evolutionary forces deeply influence the foods we eat, the gifts we offer, the cosmetics and clothing styles we choose to make ourselves more attractive to potential mates, and even the cultural products that stimulate our imaginations (such as art, music, and religion). The book demonstrates that most acts of consumption can be mapped onto four key Darwinian drives—namely, survival (we prefer foods high in calories); reproduction (we use products as sexual signals); kin selection (we naturally exchange gifts with family members); and reciprocal altruism (we enjoy offering gifts to close friends). The author further highlights the analogous behaviors that exist between human consumers and a wide range of animals. For anyone interested in the biological basis of human behavior or simply in what makes consumers tick—marketing professionals, advertisers, psychology mavens, and consumers themselves—this is a fascinating read.

The Chemistry Between Us Larry Young PhD 2012-09-13 How much control do we have over love? Much less than we like to think. All that mystery, all that poetry, all those complex behaviors surrounding human bonding leading to the most life-changing decisions we'll ever make, are unconsciously driven by a few molecules in our brains. How does love begin? How can two strangers come to the conclusion that it would not only be pleasant to share their lives, but that they must share them? How can a man say he loves his wife, yet still cheat on her? Why do others stay in relationships even after the romance fades? How is it possible to fall in love with the "wrong" person? How do people come to have a "type"? Physical attraction, jealousy, infidelity, mother-infant bonding—all the behaviors that so often leave us befuddled—are now being teased out of the fog of mystery thanks to today's social neuroscience. Larry Young, one of the world's leading experts in the field, and journalist Brian Alexander explain how those findings apply to you. Drawing on real human stories and research from labs around the world, *The Chemistry Between Us* is a bold attempt to create a "grand unified theory" of love. Some of the mind-blowing insights include: Love can get such a grip on us because it is, literally, an addiction. To a woman falling in love, a man is like her baby. Why it's false to say society makes gender, and how it's possible to have the body of one gender and the brain of another. Why some people are more likely to cheat than others. Why we sometimes truly can't resist temptation. Young and Alexander place their revelations into historical, political, and social contexts. In the process, they touch on everything from gay marriage to why single-mother households might not be good for society. *The Chemistry Between Us* offers powerful insights into love, sex, gender, sexual orientation, and family life that will prove to be enlightening, controversial, and thought provoking.

Mate Choice Gil G. Rosenthal 2017-07-18 A major new look at the evolution of mating decisions in organisms from protozoans to humans The popular consensus on mate choice has long been that females select mates likely to pass good genes to offspring. In *Mate Choice*, Gil Rosenthal overturns much of this conventional wisdom. Providing the first synthesis of the topic in more than three decades, and drawing from a wide range of fields, including animal behavior, evolutionary biology, social psychology, neuroscience, and economics, Rosenthal argues that "good genes" play a relatively minor role in shaping mate choice decisions and demonstrates how mate choice is influenced by genetic factors, environmental effects, and social interactions. Looking at diverse organisms, from protozoans to humans, Rosenthal explores how factors beyond the hunt for good genes combine to produce an endless array of preferences among species and individuals. He explains how mating decisions originate from structural constraints on perception and from nonsexual functions, and how single organisms benefit or lose from their choices. Both the origin of species and their fusion through hybridization are strongly influenced by direct selection on preferences in sexual and nonsexual contexts. Rosenthal broadens the traditional scope of mate choice research to encompass not just animal behavior and behavioral ecology but also neurobiology, the social sciences, and other areas. Focusing on mate choice mechanisms, rather than the traits they target, *Mate Choice* offers a groundbreaking perspective on the proximate and ultimate forces determining the evolutionary fate of species and populations.

The Evolution of Human Sexuality Donald Symons 1979-08-30 Anthropology, Sexual Studies, Psychology, Sociology, Gender and Cultural Studies

The Oxford Handbook of Sexual Conflict in Humans Todd K. Shackelford 2012-01-11 Sexual conflict - what happens when the reproductive interests of males and females diverge - occurs in all sexually reproducing species, including humans. This is the first volume to assemble the latest theoretical and empirical work on sexual conflict in humans from the leading scholars in the fields of evolutionary psychology and anthropology.

Bad Men David M. Buss 2021-07-01 Sexual conflict permeates ancient religions, from injunctions about thy neighbor's wife to the sexual obligations of marriage. It is etched in written laws that dictate who can and cannot have sex with whom. Its manifestations shape our sexual morality, evoking approving accolades or contemptuous condemnation. It produces sexual double standards that flourish even in the most sexually egalitarian cultures on earth. And although every person alive struggles with sexual conflict, most of us see only the tip of the iceberg: dating deception, a politician's unsavory grab, the slow crumbling of a once-happy marriage, a romantic breakup that turns nasty. *Bad Men* shows that this "battle of the sexes" is deeper and far more pervasive than anyone has recognized, revealing the hidden roots of sexual conflict -- roots that originated over deep evolutionary time -- which characterise our sexual psychology. Providing novel insights into our minds and behaviours, *Bad Men* presents a unifying new theory of sexual conflict and offers practical advice for men and women seeking to avoid it.

Mating Intelligence Unleashed Glenn Geher PhD 2013-01-30 Psychologists often paint a picture of human mating as visceral, instinctual. But that's not the whole story. In courtship and display, sexual competition and rivalry, we are also guided by what Glenn Geher and Scott Barry Kaufman call Mating Intelligence--a range of mental abilities that have evolved to help us find the right partner. Mating Intelligence is at work in our efforts to form, maintain, and end relationships. It guides us in flirtation, foreplay, copulation, finding and choosing a mate, and many other behaviors. In *Mating Intelligence Unleashed*, psychologists Geher and Kaufman take readers on a fascinating tour of the crossroads of mating and intelligence, drawing on cutting-edge research on evolutionary psychology, intelligence, creativity, personality, social psychology, neuroscience, and more. The authors show that despite what you may read in the latest issue of *Maxim*, *Playboy*, *Vogue*, or *GQ*, physical attractiveness isn't the whole story. Human mating draws on a range of mental skills and attributes--from the creative use of pick-up lines, to displays of charisma, intelligence, humor, personality, and compassion. Along the way, the authors shed new light on age-old questions, such as: What role does personality play in mating? Which traits are attractive--and which traits repulse? How do people really choose mates? How do men and women deceive each other? How important is emotional intelligence? Why do people create art--and does it have anything to do with sex? Do nice guys really finish last? Since Glenn Geher coined the term Mating Intelligence in 2006, it has drawn a great deal of media attention, ranging from a *Psychology Today* cover story to articles in the *New Scientist*, the *Washington Times*, the *Huffington Post*, and elsewhere. Now, in *Mating Intelligence Unleashed*, readers will have the first full account of this revolutionary new approach to dating, mating, and love.

The Ape that Understood the Universe Steve Stewart-Williams 2019-11-21 The Ape that Understood the Universe is the story of the strangest animal in the world: the human animal. It opens with a question: How would an alien scientist view our species? What would it make of our sex differences, our sexual behavior, our altruistic tendencies, and our culture? The book tackles these issues by drawing on two major schools of thought: evolutionary psychology and cultural evolutionary theory. The guiding assumption is that humans are animals, and that like all animals, we evolved to pass on our genes. At some point, however, we also evolved the capacity for culture - and from that moment, culture began evolving in its own right. This transformed us from a mere ape into an ape capable of reshaping the planet, travelling to other worlds, and understanding the vast universe of which we're but a tiny, fleeting fragment. Featuring a new foreword by Michael Shermer.

Inferior Angela Saini 2017-05-30 What science has gotten so shamefully wrong about women, and the fight, by both female and male scientists, to rewrite what we thought we knew For hundreds of years it was common sense: women were the inferior sex. Their bodies were weaker, their minds feebler, their role subservient. No less a scientist than Charles Darwin asserted that women were at a lower stage of evolution, and for decades, scientists--most of them male, of course--claimed to find evidence to support this. Whether looking at intelligence or emotion, cognition or behavior, science has continued to tell us that men and women are fundamentally different. Biologists claim that women are better suited to raising families or are, more gently, uniquely empathetic. Men, on the other hand, continue to be described as excelling at tasks that require logic, spatial reasoning, and motor skills. But a huge wave of research is now revealing an alternative version of what we thought we knew. The new woman revealed by this scientific data is as strong, strategic, and smart as anyone else. In *Inferior*, acclaimed science writer Angela Saini weaves together a fascinating--and sorely necessary--new science of women. As Saini takes readers on a journey to uncover science's failure to understand women, she finds that we're still living with the legacy of an establishment that's just beginning to recover from centuries of entrenched exclusion and prejudice. Sexist assumptions are stubbornly persistent: even in recent years, researchers have insisted that women are choosy and monogamous while men are naturally promiscuous, or that the way men's and women's brains are wired confirms long-discredited gender stereotypes. As Saini reveals, however, groundbreaking research is finally rediscovering women's bodies and minds. *Inferior* investigates the gender wars in biology, psychology, and anthropology, and delves into cutting-edge scientific studies to uncover a fascinating new portrait of women's brains, bodies, and role in human evolution.

The Mating Mind Geoffrey Miller 2011-12-21 At once a pioneering study of evolution and an accessible and lively reading experience, *The Mating Mind* marks the arrival of a prescient and provocative new science writer. Psychologist Geoffrey Miller offers the most convincing--and radical--explanation for how and why the human mind evolved. Consciousness, morality, creativity, language, and art: these are the traits that make us human. Scientists have traditionally explained these qualities as merely a side effect of surplus brain size, but Miller argues that they were sexual attractors, not side effects. He bases his argument on Darwin's theory of sexual selection, which until now has played second fiddle to Darwin's theory of natural selection, and draws on ideas and research from a wide range of fields, including psychology, economics, history, and pop culture. Witty, powerfully argued, and continually thought-provoking, *The Mating Mind* is a landmark in our understanding of our own species.

The Artificial Ape Timothy Taylor 2010-07-20 A breakthrough theory that tools and technology are the real drivers of human evolution Although humans are one of the great apes, along with chimpanzees, gorillas, and orangutans, we are remarkably different from them. Unlike our cousins who subsist on raw food, spend their days and nights outdoors, and wear a thick coat of hair, humans are entirely dependent on artificial things, such as clothing, shelter, and the use of tools, and would die in nature without them. Yet, despite our status as the weakest ape, we are the masters of this planet. Given these inherent deficits, how did humans come out on top? In this fascinating new account of our origins, leading archaeologist Timothy Taylor proposes a new way of thinking about human evolution through our relationship with objects. Drawing on the latest fossil

evidence, Taylor argues that at each step of our species' development, humans made choices that caused us to assume greater control of our evolution. Our appropriation of objects allowed us to walk upright, lose our body hair, and grow significantly larger brains. As we push the frontiers of scientific technology, creating prosthetics, intelligent implants, and artificially modified genes, we continue a process that started in the prehistoric past, when we first began to extend our powers through objects. Weaving together lively discussions of major discoveries of human skeletons and artifacts with a reexamination of Darwin's theory of evolution, Taylor takes us on an exciting and challenging journey that begins to answer the fundamental question about our existence: what makes humans unique, and what does that mean for our future?

The Mating Mind Geoffrey Miller 2000

Spent Geoffrey Miller 2009 Why do we buy? Why are so many of our consumer choices simply a waste of time, energy, and money? How does advertising really work? And why are pregnant women more racist than the rest of us? In this brilliantly original, provocative and witty book, Geoffrey Miller - acclaimed author of *The Mating Mind*- uses evolutionary psychology to explain the phenomenon of modern brand-driven consumerism. Traversing the murky terrains of marketing, advertising, brands, media, genetics, neuroscience and the latest advances in evolutionary biology to explore human behavior, *Spent* argues that many of our product choices are driven by the desire not to feel good, but to look good, by displaying our evolutionary fitness to those around us. At once a searing critique of the excesses of twenty-first-century consumerism and a masterful new take on understanding how the mind works, *Spent* is a radical, timely and original book.

Spent Geoffrey Miller 2010-05-25 A leading evolutionary psychologist probes the unconscious instincts behind American consumer culture Illuminating the hidden reasons for why we buy what we do, *Spent* applies evolutionary psychology to the sensual wonderland of marketing and perceived status that is American consumer culture. Geoffrey Miller starts with the theory that we purchase things to advertise ourselves to others, and then examines other factors that dictate what we spend money on. With humor and insight, Miller analyzes an array of product choices and deciphers what our decisions say about ourselves, giving us access to a new way of understanding-and improving-our behaviors to become happier consumers.

The Evolution of Desire David M. Buss 2016-12-27 A "drop-dead shocker" (Washington Post Book World) that uses evolutionary psychology to explain human mating and the mysteries of love If we all want love, why is there so much conflict in our most cherished relationships? To answer this question, we must look into our evolutionary past, argues prominent psychologist David M. Buss. Based on one of the largest studies of human mating ever undertaken, encompassing more than 10,000 people of all ages from thirty-seven cultures worldwide, *The Evolution of Desire* is the first work to present a unified theory of human mating behavior. Drawing on a wide range of examples of mating behavior — from lovebugs to elephant seals, from the Yanomamö tribe of Venezuela to online dating apps — Buss reveals what women want, what men want, and why their desires radically differ. Love has a central place in human sexual psychology, but conflict, competition, and manipulation also pervade human mating — something we must confront in order to control our own mating destiny. Updated to reflect the very latest scientific research on human mating, this definitive edition of this classic work of evolutionary psychology explains the powerful forces that shape our most intimate desires.

The Attraction of Religion D. Jason Slone 2015-02-26 Religion is an evolutionary puzzle. It involves beliefs in counterfactual worlds and engagement in costly rituals. Yet religion is widespread across all human cultures and eras. This begs the question, why are so many people attracted to religion? In *The Attraction of Religion*, essays by leading scholars in evolutionary psychology, anthropology, and religious studies demonstrate how religion may be related to evolutionary adaptations because religious commitments involve fitness-enhancing behaviours that promote reproduction, kinship, and social solidarity. Could it be that religion is wide-spread, at least in the modern world, because it helps to facilitate cooperative breeding? International contributors explore the philosophical and theoretical arguments for and against the use of costly signalling, sexual selection, and related theories to explain religion, and empirical findings that support or disconfirm such claims. The first book-length treatment that focuses specifically on costly signalling, sexual selection, and related evolutionary theories to explain religion, *The Attraction of Religion* will be an important contribution to the field and will be of interest to researchers in the fields of evolutionary psychology, religion and science, the psychology of religion, and anthropology of religion.

Spent Geoffrey Miller 2009-05-14 A leading evolutionary psychologist probes the hidden instincts behind our working, shopping, and spending Evolutionary psychology-the compelling science of human nature-has clarified the prehistoric origins of human behavior and influenced many fields ranging from economics to personal relationships. In *Spent* Geoffrey Miller applies this revolutionary science's principles to a new domain: the sensual wonderland of marketing and status seeking that we call American consumer culture. Starting with the basic notion that the goods and services we buy unconsciously advertise our biological potential as mates and friends, Miller examines the hidden factors that dictate our choices in everything from lipstick to cars, from the magazines we read to the music we listen to. With humor and insight, Miller analyzes an array of product choices and deciphers what our decisions say about ourselves, giving us access to a new way of understanding-and improving-our behaviors. Like *Freakonomics* or *The Tipping Point*, *Spent* is a bold and revelatory book that illuminates the unseen logic behind the chaos of consumerism and suggests new ways we can become happier consumers and more responsible citizens.

The Age of Scientific Sexism Mari Ruti 2015-07-30 We trust our sciences to operate on a plane of objectivity and fact in a world of subjectivity and cultural ideologies, but should we? In *The Age of Scientific Sexism*, philosopher Mari Ruti offers a sharp critique of the gender profiling tendencies of evolutionary psychology, untangling the insidious threads of various gender mythologies that have infiltrated-or perhaps even defined-this faux-science. Selling stereotypes as scientific facts, evolutionary psychology continually brings retrograde models of sexuality into mainstream culture: it insists that men and women live in two completely different psychological, emotional, and sexual universes, and that they will consequently always be locked in a vicious battle of the sexes. Among these regressive arguments is the assumption that men's sexuality is urgent and indiscriminate, whereas women are "naturally" reluctant, reticent, and choosy-a concept constructed to justify masculine behavior, such as cheating, that women have historically found painful. On its most basic level, *The Age of Scientific Sexism* explores our impulse to "explain" romantic behavior through science: in the increasingly egalitarian gender landscape of our society, why are we so eager to embrace the rampant gender profiling that evolutionary psychology promotes? Perhaps these simplistic gender caricatures owe their popularity, at least in part, to our overly pragmatic society pragmatic society, which encourages us to search for easy answers to complex questions.

The Man Who Wasn't There Anil Ananthaswamy 2015-08-04 *Nominated for the 2016 PEN/E.O. Wilson Literary Science Writing Award* *An NBC News Notable Science Book of 2015* *Named one of Publishers Weekly's Best Books of 2015* *A Book of the Month for Brain HQ/Posit Science* *Selected by Forbes as a Must Read Brain Book of 2015* *On Life Changes Network's list of the Top 10 Books That Could Change Your Life of 2015* In the tradition of Oliver Sacks, a tour of the latest neuroscience of schizophrenia, autism, Alzheimer's disease, ecstatic epilepsy, Cotard's syndrome, out-of-body experiences, and other disorders—revealing the awesome power of the human sense of self from a master of science journalism. Anil Ananthaswamy's extensive in-depth interviews venture into the lives of individuals who offer perspectives that will change how you think about who you are. These individuals all lost some part of what we think of as our self, but they then offer remarkable, sometimes heart-wrenching insights into what remains. One man cut off his own leg. Another became one with the universe. We are learning about the self at a level of detail that Descartes ("I think therefore I am") could never have imagined. Recent research into Alzheimer's illuminates how memory creates your narrative self by using the same part of your brain for your past as for your future. But wait, those afflicted with Cotard's syndrome think they are already dead; in a way, they believe that "I think therefore I am not." Who—or what—can say that? Neuroscience has identified specific regions of the brain that, when they misfire, can cause the self to move back and forth between the body and a doppelgänger, or to leave the body entirely. So where in the brain, or mind, or body, is the self actually located? As Ananthaswamy elegantly reports, neuroscientists themselves now see that the elusive sense of self is both everywhere and nowhere in the human brain.

Sexual Selection in Homo sapiens Menelaos Apostolou 2018-08-04 The present book aims to examine how sexual selection works in the human species. Almost all scholarly effort focuses on sexual selection in non-human species and extrapolates the findings to the human one. However, human mating has a unique pattern not found in any other species, namely parental influence over mate choice. Across preindustrial societies, the typical pattern of long-term mating is arranged marriage, where parents choose spouses for their children. By doing so, parents effectively become a sexual selection force. Traits that enhance an individual's chance to be selected as a son- or a daughter-in-law confer important reproductive advantages to those who are endowed with them, increasing in frequency in the population. The author has coined the term parental choice to describe the sexual selection force that arises from parental control over mating. He synthesizes extensive theoretical and empirical work in order to understand and model this force. The aim is to understand which factors give rise to parental choice and to combine these insights into constructing a more formal model. It also aims to further examine whether the predictions of the model fit the patterns of mating found across different types of human societies, and how the model can be used to understand the evolution of behavioral traits involved in mating. By synthesizing the various arguments put forward and published across the literature, the book offers a comprehensive argument and overview of an aspect of sexual selection unique to our species. Furthermore, the book revises and extends previously made arguments and models, while it provides useful insights on how the proposed revision of sexual selection theory can enable us to understand a wide range of human behavioral phenomena. It should be key reading for those interested in studying sexual selection in general and in the Homo sapiens species in particular.

The Red Queen Matt Ridley 1994-10-06 Sex is as fascinating to scientists as it is to the rest of us. A vast pool of knowledge, therefore, has been gleaned from research into the nature of sex, from the contentious problem of why the wasteful reproductive process exists at all, to how individuals choose their mates and what traits they find attractive. This fascinating book explores those findings, and their implications for the sexual behaviour of our own species. It uses the Red Queen from 'Alice in Wonderland' - who has to run at full speed to stay where she is - as a metaphor for a whole range of sexual behaviours. The book was shortlisted for the 1994 Rhone-Poulenc Prize for Science Books. 'Animals and plants evolved sex to fend off parasitic infection. Now look where it has got us. Men want BMWs, power and money in order to pair-bond with women who are blonde, youthful and narrow-waisted ... a brilliant examination of the scientific debates on the hows and whys of sex and evolution' Independent.

Adapting Minds David J. Buller 2006-02-17 Was human nature designed by natural selection in the Pleistocene epoch? The dominant view in evolutionary psychology holds that it was—that our psychological adaptations were designed tens of thousands of years ago to solve problems faced by our hunter-gatherer ancestors. In this provocative and lively book, David Buller examines in detail the major claims of evolutionary psychology—the paradigm popularized by Steven Pinker in *The Blank Slate* and by David Buss in *The Evolution of Desire*—and rejects them all. This does not mean that we cannot apply evolutionary theory to human psychology, says Buller, but that the conventional wisdom in evolutionary psychology is misguided. Evolutionary psychology employs a kind of reverse engineering to explain the evolved design of the mind, figuring out the adaptive problems our ancestors faced and then inferring the psychological adaptations that evolved to solve them. In the carefully argued central chapters of *Adapting Minds*, Buller scrutinizes several of evolutionary psychology's most highly publicized "discoveries," including "discriminative parental solicitude" (the idea that stepparents abuse their stepchildren at a higher rate than genetic parents abuse their biological children). Drawing on a wide range of empirical research, including his own large-scale study of child abuse, he shows that none is actually supported by the evidence. Buller argues that our minds are not adapted to the Pleistocene, but, like the immune system, are continually adapting, over both evolutionary time and individual lifetimes. We must move beyond the reigning orthodoxy of evolutionary psychology to reach an accurate understanding of how human psychology is influenced by evolution. When we do, Buller claims, we will abandon not only the quest for human nature but the very idea of human nature itself.

The Cambridge Handbook of Evolutionary Perspectives on Human Behavior Lance Workman 2020-03-19 The transformative wave of Darwinian insight continues to expand throughout the human sciences. While still centered on evolution-focused fields such as evolutionary psychology, ethology, and human behavioral ecology, this insight has also influenced cognitive science, neuroscience, feminist discourse, sociocultural anthropology, media studies, and clinical psychology. This handbook's goal is to amplify the wave by bringing together world-leading experts to provide a comprehensive and up-to-date overview of evolution-oriented and influenced fields. While evolutionary psychology remains at the core of the collection, it also covers the history, current standing, debates, and future directions of the panoply of fields entering the Darwinian fold. As such, *The Cambridge Handbook of Evolutionary Perspectives on Human Behavior* is a valuable reference not just for evolutionary psychologists but also for scholars and students from many fields who wish to see how the evolutionary perspective is relevant to their own work.

Foundations of Evolutionary Psychology Charles Crawford 2012-10-12 Evolutionary psychology is concerned with the adaptive problems early humans faced in ancestral human environments, the nature of the psychological mechanisms natural selection shaped to deal with those ancient problems, and the ability of the resulting evolved psychological mechanisms to deal with the problems people face in the modern world. Evolutionary psychology is currently advancing our understanding of altruism, moral behavior, family violence, sexual aggression, warfare, aesthetics, the nature of language, and gender differences in mate choice and perception. It is helping us understand the relationships between cognitive science, developmental psychology, behavior genetics, personality, and social psychology. *Foundations of Evolutionary Psychology* provides an up-to-date review of the ideas, issues, and applications of contemporary evolutionary psychology. It is suitable for senior undergraduates, first year graduate students, or professionals who wish to become conversant with the major issues currently shaping the emergence of this dynamic new field. It will be interesting to psychologists, anthropologists, sociologists, economists, philosophers, cognitive scientists, and anyone interested in using new developments in the theory of evolution to gain new insights into human behavior.

The Mating Mind Geoffrey Miller 2001 Miller shows how our brains are the products of sexual selection, not natural selection, and how this alters and illuminates our understanding of intelligence, art, language, mortality, sex and the differences between men and women.

Mating Intelligence Glenn Geher 2008 Human intelligence is sexually attractive, and strongly predicts the success of sexual relationships, but the behavioral sciences have usually ignored the interface between intelligence and mating. This is the first serious scholarly effort to explore that interface, by examining both universal and individual differences in human mating intelligence. Contributors include some of the most prominent evolutionary psychologists and promising new researchers in human intelligence, social psychology, intimate relationships, and sexuality. David Buss' foreword and the opening chapter explore what 'mating intelligence' means, and why it is central to human cognition and sexuality. The book's six sections then examine (1) our mating mechanisms — universal emotional and cognitive adaptations for mating intelligently — that guide mate search, mate choice, and courtship; (2) how mating intelligence strategically guides our choice of mating tactics and partners given different relationship goals, personality traits, forms of deception, and

the existence of children; (3) the genetic and psychiatric causes of individual differences in mating intelligence; (4) how we use mental fitness indicators — forms of human intelligence such as creativity, humor, and emotional intelligence — to attract and retain sexual partners; (5) the ecological and social contexts of mating intelligence; (6) integrative models of mating intelligence that can guide future research. Mating Intelligence is intended for researchers, advanced students, and courses in human sexuality, intimate relationships, intelligence research, behavior genetics, and evolutionary, personality, social, and clinical psychology.

Feathers Thor Hanson 2011-05-31 As seen on PBS's American Spring Live, one of America's great nature-writers explores the magic and science of feathers. Feathers are an evolutionary marvel: aerodynamic, insulating, beguiling. They date back more than 100 million years. Yet their story has never been fully told. In *Feathers*, biologist Thor Hanson details a sweeping natural history, as feathers have been used to fly, protect, attract, and adorn through time and place. Applying the research of paleontologists, ornithologists, biologists, engineers, and even art historians, Hanson asks: What are feathers? How did they evolve? What do they mean to us? Engineers call feathers the most efficient insulating material ever discovered, and they are at the root of biology's most enduring debate. They silence the flight of owls and keep penguins dry below the ice. They have decorated queens, jesters, and priests. And they have inked documents from the Constitution to the novels of Jane Austen. *Feathers* is a captivating and beautiful exploration of this most enchanting object.
