Social Skills for Teenagers with Developmental and Autism Spectrum Disorders - Elizabeth A. Laugeson 2011-01-19

This book is essential reading for any clinician or researcher working with teens with autism spectrum disorders. This parent-assisted intervention for teens is based on a comprehensive, evidence-based, 14-week program at UCLA's Semel Institute for Neuroscience and Human Behavior, the manualization of the popular UCLA PEERS Program, and the success of the Children's Friendship Training (Routledge, 2002) manual for children. After reviewing techniques

designed to help parents and therapists tailor the manual to the needs of the teens with whom they are working, the text moves on to the individual treatment sessions and strategies for tackling issues such as developing conversational skills, choosing friends, using humor, get-togethers, teasing, bullying, gossiping, and handling disagreements. Each session chapter includes handouts, homework assignments, descriptions of what to expect (and how to handle challenges in delivering the intervention), and customized tips for both parents and therapists.

Lizards in an Evolutionary Tree - Jonathan B.

Losos 2011-02-09

"In a book both beautifully illustrated and deeply informative, Jonathan Losos, a leader in evolutionary ecology, celebrates and analyzes the diversity of the natural world that the fascinating anoline lizards epitomize. Readers who are drawn to nature by its beauty or its intellectual challenges—or both—will find his book rewarding."—Douglas J. Futuyma, State University of New York, Stony Brook "This book is destined to become a classic. It is scholarly, informative, stimulating, and highly readable, and will inspire a generation of students."—Peter R. Grant, author of *How and Why Species Multiply: The Radiation of Darwin's Finches* "Anoline lizards experienced a spectacular adaptive radiation in the dynamic landscape of the Caribbean islands. The radiation has extended over a long period of time and has featured separate radiations on the larger islands. Losos, the leading active student of these lizards, presents an integrated and

synthetic overview, summarizing the enormous and multidimensional research literature. This engaging book makes a wonderful example of an adaptive radiation accessible to all, and the lavish illustrations, especially the photographs, make the anoles come alive in one's mind."—David Wake, University of California, Berkeley "This magnificent book is a celebration and synthesis of one of the most eventful adaptive radiations known. With disarming prose and personal narrative Jonathan Losos shows how an obsession, beginning at age ten, became a methodology and a research plan that, together with studies by colleagues and predecessors, culminated in many of the principles we now regard as true about the origins and maintenance of biodiversity. This work combines rigorous analysis and glorious natural history in a unique volume that stands with books by the Grants on Darwin's finches among the most informed and engaging accounts ever written on the evolution of a

group of organisms in nature."—Dolph Schluter, author of *The Ecology of Adaptive Radiation*

The Art of Being Human - Michael Wesch 2018-08-07

Bourdieu called anthropology a combat sport, an extreme sport as well as a tough and rigorous discipline. ... It teaches students not to be afraid of getting one's hands dirty, to get down in the dirt, and to commit yourself, body and mind. Susan Sontag called anthropology a "heroic" profession." What is the payoff for this heroic journey? You will find ideas that can carry you across rivers of doubt and over mountains of fear to find the the light and life of places forgotten. Real anthropology cannot be contained in a book. You have to go out and feel the world's jagged edges, wipe its dust from your brow, and at times, leave your blood in its soil. In this unique book, Dr. Michael Wesch shares many of his own adventures of being an anthropologist and what the science of human beings can tell us about the art of being human. This special first draft edition is a loose framework for more and more complete future chapters and writings. It serves as a companion to anth101.com, a free and open resource for

instructors of cultural anthropology. This 2018 text is a revision of the "first draft edition" from 2017 and includes 7 new chapters.

Concepts of Biology - Samantha Fowler

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these
